## PREFACE TO VOLUME XXI

With the present volume our series reverts to the far Northwest, and takes up the story of the Oregon country during the fourth decade of the nineteenth century.

After the failure of the Astorian enterprise (1811-13), recounted with so much detail in the narratives of Franchère and Ross (reprinted in our volumes vi and vii), the Northwest Coast fell into the hands of the British fur-trade companies, who ruled the forest regions with a sway as absolute as that of a czar. The "Nor'westers" first occupied the field, sent out their daring "bourgeois" in all directions, and reaped a rich harvest of pelts. But upon the consolidation of the rival corporations (1821), the Hudson's Bay Company's men succeeded them, and for the first time law and order were enforced by the chief factors, and the denizens of the Northwest, white and red, soon learned to obey and revere their new masters. Prominent among the factors was Dr. John McLoughlin, the benevolent despot of Fort Vancouver, whose will was law not only for savages and fur-trade employés, but for all overland emigrants, British and American, who now began swarming to the banks of the Columbia. For twenty years he governed a province larger than France, and friend and foe alike testify to his probity and kindness, from which Americans profited quite as fully as those from his own land.

To the world at large, during this long period, the land beyond the mountains remained unknown and almost unknowable. Occasionally a New England skipper ventured to the mouth of the Columbia, exchanging goods from Hawaii and the South Seas for the salmon and furs of the

Northwest Coast; but the inhabitants of the interior of our country long found the Rockies and their outlying deserts insurmountable barriers to Western passage.

Fur-traders finally led the way into the heart of the mountains. The Rocky Mountain Fur Company, under General William Ashley, began in 1822 that series of explorations and excursions that opened the highland fastnesses to the men of the West, and paved the way for the tracing of the Oregon Trail.

But it was bona-fide settlers, not fur-traders or trappers, that captured Oregon for the United States. Among the earliest of these were members of the company escorted by Captain Nathaniel Jarvis Wyeth, whose home was in the shades of academic learning at Cambridge, Massachusetts. Wyeth, however, owed the inception of the enterprise to another New Englander, his quondam fellow-townsmen, Hall J. Kelley. An enterprising schoolmaster, the narratives of Lewis and Clark and of the Astorian participants fired his imagination with a desire to behold the Far West, while the joint-occupancy treaty with Great Britain (1818) aroused in him a patriotic desire that the region watered by the Columbia might be possessed by his native land. Throughout more than a decade he published pamphlets and articles for the local press, glowing with praise of Oregon, and succeeded in organizing the Oregon Colonization Society, from among whose members he hoped to lead an expedition to the far-away land of promise.

Among those who hearkened to him was the young Cambridge, Massachusetts, Wyeth, whose mind, more practical than Kelley's, but as yet uninformed as to the real difficulties of the enterprise, conceived the project of a great commercial enterprise to the Northwest. In the winter of 1831-32, Wyeth formed his party of pioneers and formulated his plans. With the opening of the spring a vessel laden with supplies

was to start around Cape Horn, to meet the overland adventurers at the mouth of the Columbia. Wyeth, meanwhile, was to lead a company of hale young men across the continent, who should hunt and trap on the way, and be ready on arrival to provide a cargo of furs for the vessel, and later to develop the products of the Oregon country.

Wyeth's original plan for the land party included forty companions, but he finally set forth from Baltimore with an enrollment of but twenty-four. Arrived in St. Louis, he learned for the first time of the vast operations that Western fur-traders were already carrying on among the mountains — men to whom the experience of a life-time had taught the conditions and the methods of trade beyond the frontier. Nothing daunted, however, young Wyeth joined the yearly caravan of the Rocky Mountain Fur Company, and under its protection proceeded to that company's rendezvous at Pierre's Hole. There the majority of his men, finding the hazard greater than they had anticipated, turned back; but the leader, with a handful of followers, pressed on, only to learn in the Oregon country that his vessel had been wrecked on a Pacific reef, and his cargo of supplies lost.

Received at Fort Vancouver with hospitable courtesy on the part of the Hudson's Bay people, Wyeth passed the winter in exploring the region and learning its resources. He became more than ever eager to exploit the great possibilities lying before him, and returned across the continent to Boston, making en route the famous journey — commemorated by Washington Irving in his *Scenes in the Rocky Mountains* — down the Bighorn and Yellowstone in a bull-boat. While still among the mountain men, Wyeth confidently entered into a contract with Milton Sublette and the latter's partner, Thomas Fitzpatrick, to carry out to them their yearly supplies the following season.

Intent on this and other projects, our adventurer hastened

on to Boston, organized the Columbia River Fishing and Trading Company, and secured another vessel to proceed to Oregon by sea. This time Wyeth's party was trebled, and with a following of over seventy he started from St. Louis on March 7, 1834. Among his companions were the naturalists Nuttall and Townsend, and the missionaries Jason and Daniel Lee, all of whom were seeking the Oregon country on errands of their own. The fate of Wyeth's second expedition need not here be recounted, further than to state that the contract being repudiated by the Rocky Mountain men, Wyeth established a trading post in eastern Idaho, which he later (1837) sold to the Hudson's Bay Company and proceeded on to Oregon. After indefatigable efforts, and fatigues seldom paralleled, Wyeth finally (1836) abandoned the country and his ambitious project, and settled down to the humdrum role of ice-merchant in Cambridge, amassing a moderate fortune in shipping that useful commodity to the West Indies.

In recent years the journals and correspondence of Nathaniel J. Wyeth, recounting the experience of his two expeditions, have come to light and been published by the Oregon Historical Society. These documents, however, furnish but terse and bald statements of events, whereas detailed narratives appeared in works published many years before. The historian of the first expedition was a kinsman of its leader — John B. Wyeth, a young man of eighteen summers, who had previously been to sea and acquired a taste for adventure. After the long journey into the mountains, young Wyeth became dissatisfied with the hardships and ill prospects of the venture, and joined those malcontents at Pierre's Hole who voted for return, thus abandoning his leader before the journey was more than two-thirds completed. Upon arrival at Cambridge, the narrative of the younger Wyeth's adventures sped

around the circle of his acquaintances, and reached the ear of Dr. Benjamin Waterhouse, a well-known local physician and scientist.

Waterhouse desired to discourage the prevalent wild schemes of Western emigration, and published Wyeth's experiences as a useful warning against such projects. The little book as issued from the press bore the title: *Oregon; or a Short History of a Long Journey from the Atlantic Ocean to the Region of the Pacific by Land, drawn up from the notes and oral information of John B. Wyeth* (Cambridge, 1833). It is not difficult for the reader to distinguish the work of the young traveller from that of the older scientist — the literary finish, the allusions, the moralizing and animadversions, of this composite book, are certainly the elder's; the racy adventures, the off-hand descriptions, surely those of the younger collaborator.<sup>1</sup>

John B. Wyeth's publication was distinctly annoying and hurtful to the plans of his cousin, and caused the latter to characterize it as "full of white lies." It is in the animus rather than the words themselves that the deceit is to be found; but disregarding its injudicious criticisms and comments, Wyeth's book is a readable work of travel, written in the full flush of health and spirits experienced by a vigorous youngster on a journey taken more as an escapade than with serious purpose. How far this motive carried him, is witnessed by the recitation of practical jokes in Cincinnati, and by the disasters of the home journey, when, abandoned by his companions, he was turned adrift in plague-stricken New Orleans to shift for himself. As a picture of early life on the plains and in the mountains, the account is graphic and attractive, as exemplified by the descriptions of the scene at the rendezvous — also that

---

<sup>1</sup> In Harvard University Library, the book is catalogued under Waterhouse as author.

at the conference between the Blackfoot chiefs and the envoys of the whites, previous to the battle of Pierre's Hole. Vivid pictures of the fur-trade leaders, and swift glimpses of friendly and hostile tribesmen, jostle the description of what was in effect a New England town-meeting in Pierre's Hole, and the report of an Indian battle famous in the annals of the West. The Wyeth narrative was printed privately, for circulation among friends, and therefore in a small edition. Examples are consequently now extremely rare, and it is believed that its reprint in the present series will be welcomed by students of early Western exploration.

Nathaniel J. Wyeth's second expedition was even more fortunate in its historian. John K. Townsend, a well-known Philadelphia physician and naturalist, had long been desirous of exploring the far western country in the interests of science. Hearing from his friend, Thomas Nuttall, then botanist at Harvard College, that he was preparing to join an expedition across the continent, Townsend made arrangements to accompany him, and obtained from the American Philosophical Society and the Academy of Natural Sciences at Philadelphia a commission to search for birds on their behalf.

The two scientists joined Wyeth at Boonville, Missouri, after a pedestrian journey from St. Louis to that point. The adventurers left Independence on April 28, 1834, in company with the annual fur-trading caravan for the Far West, and late in June arrived at the famous Green River rendezvous. Thence the Wyeth party proceeded to the Columbia, where a hearty welcome from Hudson's Bay officials awaited them both at Walla Walla and Vancouver.

Townsend remained in the Oregon district for nearly two years. In the winter of 1834-35 he spent several months

in the Sandwich Islands, returning in Wyeth's vessel, the "May Dacre," in March, 1835. The next year he was employed by the Hudson's Bay Company as physician at Fort Vancouver, of which duties he was relieved by the coming of one of their own surgeons from the North (March, 1836). Still the ornithologist lingered in the country, anxious to complete his collection of native birds. He journeyed up the Columbia to Walla Walla, made a short excursion into the Blue Mountains, explored the river's mouth, visited the ruins of Lewis and Clark's Fort Clatsop, and finally embarked for home, by way of Cape Horn, on November 30, 1836. Three months were passed in Hawaii, en route; his stay in Chili was prolonged by illness; but at last, after a tedious voyage, he arrived off Cape Henlopen November 13, 1837, having been absent three years and eight months.

Townsend's account of his travels appeared at Philadelphia in 1839, entitled: *Narrative of a Journey across the Rocky Mountains to the Columbia River, and a Visit to the Sandwich Islands, Chili, &c., with a Scientific Appendix*. A London edition followed in 1840, bearing the title, *Sporting Excursions to the Rocky Mountains including a Journey to the Columbia River and a Visit to the Sandwich Islands, Chili, etc.* This contains a few insignificant changes. Our reprint is from the original Philadelphia version, omitting both the now unessential appendix, and that portion of the narrative which deals with Hawaii and South America, these being outside the field of our present interest.

Townsend wrote in an easy, flowing style, and a large share of his pages bear evidence of closely following his daily journals. Unlike Wyeth's kinsman, Townsend had much admiration for the ability and resource of his leader — for his "most indefatigable perseverance and industry" — and could only attribute his failure to the mysterious dealings of Providence. From the commercial and economic stand-

point, Wyeth's enterprise was a failure; from the historian's point of view, it was eminently successful. Not only did he conduct considerable parties of Americans across the continent, but some of these became permanent settlers in the Oregon country; and his enterprise awakened the country to the dangers of joint political occupancy.

Lewis and Clark's journals, as paraphrased by Nicholas Biddle in 1814, had first called popular attention to the region. John B. Wyeth's book, in 1833, was the first American publication on the subject, after the records of the initial exploration, and aroused a fresh interest in at least a limited group of influential readers; the spark was further kindled by the appearance, in 1836, of Washington Irving's classic *Astoria*; and then appeared, three years later, Townsend's admirable narrative, giving to the world some detailed knowledge of the resources of the Far Northwest. In the same year with Townsend's publication, Wyeth himself presented to Congress his "Memoir on Oregon,"<sup>2</sup> which was freighted with information concerning the worth of the new region. These several works were important influences in forcing the Oregon question upon the attention of Congress, and thus paving the way for the final acquisition of that country by the United States under the Oregon Treaty of 1846.<sup>3</sup>

In the preparation of the present volume for the press, the Editor has had, throughout, the active assistance of Louise Phelps Kellogg, Ph.D.

A contented mind is a continual feast; but *entire satisfaction* has never been procured by wealth however enormous, or ambition however successful.

True happiness is to no place confin'd,  
But still is found in a *contented* mind.

## OREGON EXPEDITION

In order to understand this Oregon Expedition, it is necessary to say, that thirty years ago (1803), PRESIDENT JEFFERSON recommended to Congress to authorize competent officers to explore the river *Missouri* from its mouth to its source, and by crossing the mountains to seek the best water communication thence to the *Pacific* Ocean. This arduous task was undertaken by Captain M. Lewis and Lieutenant W. Clarke of the first regiment of infantry. They were accompanied by a select party of soldiers, and arrived at the Missouri in May, 1804, and persisted in their novel and difficult task into the year 1806, and with such success as to draw from President Jefferson the following testimonial of their heroic services, viz. "The expedition of Messrs. LEWIS & CLARKE, for exploring the river Missouri, and the best communication from that to the *Pacific Ocean*, has had all the success which could be expected; and for which arduous service they deserve well of their country." <sup>1</sup>

The object of this enterprise was to confer in a friendly manner with the Indian Nations throughout their whole journey, with a view to establish a friendly and equitable commerce with them, on [2] principles emulating those that marked and dignified the settlement of Pennsylvania by *William Penn*. It was beyond doubt that the President and Congress sincerely desired to treat the Indians with kindness and justice, and to establish peace, order, and good neighbourhood with all the savage tribes with whom

---

they came in contact, and not to carry war or violence among any of them who appeared peaceably disposed.

A few years before the period of which we have spoken, our government had acquired by purchase the vast and valuable Territory of Louisiana from the renowned NAPOLEON BONAPARTE, at that time the Chief of the French Nation. Considering his previous intentions, and actual preparations under his famous General *Bernadotte*,<sup>2</sup> nothing could be more fortunate for these United States than this purchase.¶ Our possession of Louisiana was so grievous a sore to the very jealous Spaniards, that they have, till lately, done all in their power to debar and mislead us from pursuing discoveries in that quarter, or in the Arkansas, Missouri, or *Oregon*. Yet few or none of them probably believed that we should, during the present generation, or the next, attempt the exploration of the distant *Oregon* Territory, which extends from the *Rocky Mountains* to the shores of the Pacific Ocean, or in other words, from the Missouri and Yellow Stone rivers to that of the river Columbia or Oregon which pours into the Ocean by a wide mouth at the immense distance from us of about four thousand miles; yet one and twenty men, chiefly farmers and a few mechanics, had the hardihood to undertake it, and that too with deliberation and sober calculation. But what will not a New-England [3] man undertake when honor and interest are the objects before him? Have not the people of that sand-bank, Nantucket, redeemed it from the ocean, and sailed round Cape Horn in pursuit of whales

---

<sup>2</sup> Referring probably to the fact that Bernadotte had in January, 1803, been chosen minister to the United States, and tarried in France during the negotiations for the purchase of Louisiana. After these were concluded, Bernadotte's services being required in the impending war with England, his projected mission to America was abandoned. Wyeth has probably confused Bernadotte's mission with the preparation in Holland of the armament which was, under command of General Victor, intended to take possession of Louisiana.—ED.

for their oil, and seals for their skins? A score of our farmers seeing that Nantucket and New Bedford had acquired riches and independence by traversing the sea to the distant shores of the Pacific, determined to do something like it *by land*. Their ardor seemed to have hidden from their eyes the mighty difference between the facility of passing in a ship with the aid of sails, progressing day and night, by skilfully managing the winds and the helm, and that of a complicated wagon upon wheels, their journey to be over mountains and rivers, and through hostile tribes of savages who dreaded and hated the sight of a white man.

This novel expedition was not however the original or spontaneous notion of Mr. Nathaniel J. Wyeth,<sup>3</sup> nor was it entirely owing to the publications of Lewis & Clarke or Mackenzie.<sup>4</sup> Nor was it entirely owing to the enterprise of Messrs. Barrell, Hatch, and Bulfinch, who fitted out two vessels that sailed from Boston in 1787, commanded by

---

<sup>3</sup> Nathaniel Jarvis Wyeth belonged to one of the oldest families of Cambridge, Massachusetts, his ancestor settling there in 1645, on a place held by his descendants for over two centuries. Nathaniel's grandfather, Ebenezer, in 1751, purchased an estate embracing part of the present Mount Auburn, and extending to Fresh Pond. There Nathaniel's father, Jacob (1764-1856), built a summer resort known as Fresh Pond Hotel. Nathaniel, the fourth son, was born January 29, 1802, and was intended for Harvard College, of which his father and eldest brother were graduates; his ambitious spirit, however, made him impatient to begin commercial life, and to his subsequent regret the college course was abandoned. He first aided his father in the management of the hotel, but soon entered the ice trade, in which he remained until his expedition of 1832-36. In 1824 marrying his cousin Elizabeth Jarvis Stone, he shortly before the first expedition moved into a new house on the family estate, in which he resided until his death in 1856. For the Oregon expeditions, see the preface of the present volume. Returning to Cambridge in 1836, he re-entered the ice traffic, and after 1840 was the head of the concern. His highly accentuated qualities of activity and enterprise, added to his strong personality, caused him to be esteemed by his contemporaries.—ED.

<sup>4</sup> In the centennial years of the Lewis and Clark expedition, their original journals were for the first time printed as written—Thwaites (ed.), *Original Journals of the Lewis and Clark Expedition* (New York, 1904-05). For an account of the earlier edition of their journals, edited by Nicholas Biddle, see Introduction to the work just cited. On Mackenzie, consult Franchère's *Narrative* in our volume vi, p. 185, note 4.—ED.

Captains Kendrick and Gray, which vessels arrived at Nootka in September, 1788.<sup>5</sup> They were roused to it by the writings of Mr. Hall J. Kelly, who had read all the books he could get on the voyages and travels in Asia, Africa, Europe, and America, until he had heated his mind to a degree little short of the valorous Knight of La Mancha, that is to say, he believed all he read, and was firm in the opinion that an Englishman and an American, or either, by himself, could endure and achieve any thing [4] that any man could do with the same help, and farther, that a New-England man or "Yankee," could with less.<sup>6</sup> That vast region, which stretches from between the east of the Mississippi, and south of the Lakes *Superior, Huron, Michigan, Erie, and Ontario*, was too narrow a space for the enterprise of men born and bred within a mile or two of the oldest University

---

<sup>5</sup> On the expedition of Captains Kendrick and Gray, consult Franchère's *Narrative*, in our volume vi, p. 183, note 1.—ED.

<sup>6</sup> Hall J. Kelley may properly be called the father of the Oregon emigration movement. Born in New Hampshire in 1790, he left home at the age of sixteen and engaged in teaching at Hallowell, Maine. In 1814 he was graduated from Middlebury College, and the following year removed to Boston, where he was occupied as teacher and philanthropist, assisting in founding the Boston Young Men's Education Society, the Penitent Female Refuge Society, and the first Sunday School in New England. He was also a surveyor and engineer, and in 1828 invested his entire patrimony in a canal project at Three Rivers (later, Palmer), Massachusetts, whither he removed in 1829. This enterprise proved a failure, and his investment a total loss. For many years he had been interested in the Oregon country, and soon after the publication of Biddle's version of the journals of the Lewis and Clark expedition (1814), Kelley began an agitation for the American occupation of the district. He tried to interest Congress, and the first Oregon bills (1820) bear the impress of his thought — see F. F. Victor, "Hall J. Kelley," in *Oregon Historical Quarterly*, ii, pp. 381-400. Finding his frequent petitions of no avail, he formed a company in 1829 (incorporated in 1831) known as the "American Society for encouraging the settlement of Oregon territory." The winter of 1831-32 was spent in preparation for an emigration movement. Wyeth was a member of this organization, and at first proposed to accompany Kelley; but finding the latter's plans impracticable, organized his own party. Kelley set out in the spring of 1832 with a small company, who all abandoned him at New Orleans. Proceeding alone to Vera Cruz, his goods were confiscated by the Mexican government; but although now penniless, he worked his way through to California. There, in the spring of 1834, he met Ewing Young (see our volume xx, p. 23,

in the United States.<sup>7</sup> Whatever be the true character of the natives of New England, one thing must be allowed them, that of great and expansive ideas,—beyond, far beyond the generality of the inhabitants of the small Island of Britain. I say small, for if that Island should be placed in the midst of these United States, it would hardly form more than a single member of our extended republic. That vast rivers, enormous mountains, tremendous cataracts, with an extent corresponding to the hugeness of the features of America, naturally inspire men with boundless ideas, few will doubt. This adventurous disposition, at the same time, will as naturally banish from the mind what the *new-light* doctrine of Phrenology calls the disposition bump of *Inhabitiveness*, or an inclination to stay at home, and in its place give rise to a roaming, wandering inclination, which, some how or other, may so affect the organs of vision, and of hearing, as to debar a person from perceiving what others may see, the innumerable difficulties in the way. Mr. Hall J. Kelly's writings operated like a match applied to the combustible matter accumulated in the mind of the energetic Nathaniel J. Wyeth, which reflected and multiplied the flattering glass held up to view by the ingenious and well-disposed schoolmaster.

Mr. Nathaniel J. Wyeth had listened with peculiar [5] delight to all the flattering accounts from the Western re-

---

note 2), whom he persuaded to accompany him overland to Oregon. Kelley was ill, but was treated with slight respect by the British authorities at Fort Vancouver, and lived without the fort during the winter, exploring the country in the intervals of his fever. In the following spring (1835) he shipped for Hawaii, and returned to Boston, determined, notwithstanding his misfortunes, to further Oregon emigration — see report to Congress, *House Reports*, 26 Cong., 3 sess., i, 101. Kelley's health became undermined by the hardships which he had endured, his eyesight was impaired, and he passed his latter years in Palmer, Massachusetts, in poverty and obscurity, dying there in 1874.— ED.

<sup>7</sup> Harvard College was established by act of the general court of Massachusetts in 1636.— ED.

gions, and that at a time when he was surrounded with apparent advantages, and even enviable circumstances. He was born and bred near the borders of a beautiful small Lake, as it would be called in Great Britain; but what we in this country call a large Pond; because we generally give the name of Lakes only to our vast inland seas, some of which almost rival in size the Caspian and Euxine in the old world. It seems that he gave entire credit to the stories of the wonderful fertility of the soil on the borders of the Ohio, Missouri, the river Platte, and the Oregon, with the equally wonderful healthfulness of the climate. We need not wonder that a mind naturally ardent and enterprising should become too enthusiastic to pursue the laborious routine of breaking up and harrowing the hard and stubborn soil of Massachusetts within four miles of the sea, where the shores are bounded and fortified by stones and rocks, which extend inland, lying just below the surface of the ground, while the regions of the West were represented as standing in need of very little laborious culture, such was the native vigor of its black soil. The spot where our adventurer was born and grew up, had many peculiar and desirable advantages over most others in the county of Middlesex. Besides rich pasturage, numerous dairies, and profitable orchards, and other fruit trees, it possessed the luxuries of well cultivated gardens of all sorts of culinary vegetables, and all within three miles of the Boston Market-House, and two miles of the largest live-cattle market in New England. All this, and more too, had not sufficient attractions to retain Mr. Wyeth in his native town and county.

[6] Besides these blessings, I shall add another. The Lake I spoke of, commonly called *Fresh Pond*, is a body of delightful water, which seems to be the natural head or source of all the numerous underground rivers running be-

tween it and the National Navy Yard at Charlestown, which is so near to the city of Boston as to be connected to it by a bridge; for wherever you sink a well, between the body of water just mentioned, you strike a pelucid vein of it at from nineteen to twenty-two feet depth from the surface. With the aforesaid Lake or Pond is connected another not quite so large, but equally beautiful. Around these bodies of inosculating waters, are well cultivated farms and a number of gentlemen's country-seats, forming a picture of rural beauty and plenty not easily surpassed in Spring, Summer, and Autumn; and when winter has frozen the lakes and all the rivers, this spot has another and singular advantage; for our adventurer sold the *water* of this pond; which was sent to the West-Indian Islands, Philadelphia, New Orleans, and other places south of this; which is so much of a singularity as to require explanation.

In our very coldest weather, January and February, the body of water we spoke of is almost every year frozen to the thickness of from eighteen inches to two feet,—sometimes less, and very rarely more. It is then sawed into cubes of the size just mentioned, and deposited in large store-houses, and carted thence every month in the year, even through the dog-days, in heavy teams drawn by oxen and horses to the wharves in Boston, and put on board large and properly constructed vessels, and carried into the hot climates already [7] mentioned. The heavy teams five, or six, or more, close following each other, day and night, and even through the hottest months, would appear incredible to a stranger. Here was a traffic without any drawback, attended with no other charge than the labor of cutting and transporting the article; for the pond belonged to no man, any more than the air which hung above it. Both belonged to mankind. No one claimed any personal property in it, or control over it from border to border. A clearer profit can hardly be

imagined. While the farmer was ploughing his ground, manuring and planting it, securing his well-tended crop by fencing, and yet after all his labor, the Hessian-fly, the canker or slug worm, or some other destructive insect, or some untimely frost, as was the case last winter, might lay waste all his pains and cut off all his expectations. The only risk to which the Ice-merchant was liable was a blessing to most of the community; I mean the mildness of a winter that should prevent his native lake from freezing a foot or two thick. Our fishermen have a great advantage over the farmer in being exempt from fencing, walling, manuring, taxation, and dry seasons; and only need the expence of a boat, line, and hook, and the risk of life and health; but from all these the Ice-man is in a manner entirely exempted; and yet the Captain of this Oregon Expedition seemed to say, All this availeth me nothing, so long as I read books in which I find, that by only going about *four thousand miles*, over land, from the shore of our *Atlantic* to the shore of the *Pacific*, after we have there entrapped and killed the beavers and otters, we shall be able, after building vessels for [8] the purpose, to carry our most valuable peltry to China and Cochin China, our seal-skins to Japan, and our superfluous grain to various Asiatic ports, and lumber to the Spanish settlements on the Pacific; and to become rich by underworking and underselling the people of Hindostan; and, to crown all, to extend far and wide the traffic in oil by killing tame whales on the spot, instead of sailing round the stormy region of Cape Horn.

All these advantages and more too were suggested to divers discontented and impatient young men. Talk to them of the great labor, toil, and risk, and they would turn a deaf ear to you: argue with them, and you might as well reason with a snow-storm. Enterprising young men run away with the idea that *the farther they go from home, the*

*surer they will be of making a fortune.* The original projector of this golden vision first talked himself into the visionary scheme, and then talked twenty others into the same notion.<sup>8</sup> Some of their neighbours and well-wishers thought differently from them; and some of the oldest, and most thoughtful, and prudent endeavoured to dissuade them from so very arduous and hazardous an expedition. But young and single men are for tempting the untried scene; and when either sex has got a notion of that sort, the more you try to dissuade them, the more intent they are on their object. Nor is this bent of mind always to be censured, or wondered at. Were every man to be contented to remain in the town in which he was born, and to follow the trade of his father, there would be an end to improvement, and a serious impediment to spreading population. It is difficult to draw the exact line between contentment, and that inactivity [9] which approaches laziness. The disposition either way seems stamped upon us by *nature*, and therefore innate. This is certainly the case with birds and beasts;—the wild geese emigrate late in the Autumn to a southern climate, and return again in the Spring to a northern one, while the owl and several other birds remain all their lives near where they were hatched; whereas man is not so much confined by a natural bias to his native home. He can live in all climates from the equator to very near the dreary poles, which is not the case with other animals; and it would seem that nature intended he should live anywhere;—for whereas other animals are restricted in their articles of food, some living wholly on flesh, and others wholly on vegetables, man is capable of feeding upon every thing that is eatable by any creature, and of mixing every article together, and varying them by his knowledge and art of cookery,—a

<sup>8</sup> For partial lists of members of this party, consult H. S. Lyman, *History of Oregon* (New York, 1903), iii, pp. 101, 108, 254; see also *post.*—ED.

knowledge and skill belonging to man alone. Hence it appears that *Providence*, who directs everything for the best, intended that man should wander over the globe, inhabit every region, and dwell wherever the sun could shine upon him, and where water could be obtained for his use.

So far from deriding the disposition to explore unknown regions, we should consider judicious travellers as so many benefactors of mankind. It is most commonly a propensity that marks a vigorous intellect, and a benevolent heart. The conduct of the Spaniards, when they conquered Mexico and Peru with the sole view of robbing them of their gold and silver, and of forcing them to abandon their native religion, has cast an odium on those first adventurers upon this continent and their first [10] enterprises in India have stigmatized the Dutch and the English; nor were our own forefathers, who left England to enjoy religious freedom, entirely free from the stain of injustice and cruelty towards the native Indians.— Let us therefore in charity, nay, in justice, speak cautiously of what may seem to us censurable in the first explorers of uncivilized countries; and if we should err in judgment, let it be on the side of commendation.

Mr. Wyeth, or as we shall hereafter call him, *Captain* Wyeth, as being leader of the Band of the Oregon adventurers, after having inspired twenty-one persons with his own high hopes and expectations (among whom was his own brother, Dr. Jacob Wyeth,<sup>9</sup> and a gun-smith, a black-smith, two carpenters, and two fishermen, the rest being

---

<sup>9</sup> Dr. Jacob Wyeth, eldest brother of Nathaniel, was born February 10, 1779, at Cambridge, Massachusetts. After being graduated from Harvard (1820), he studied medicine both in Boston and Baltimore, and settled in New Jersey, whence he set out to join his brother's expedition. After returning from Pierre's Hole — as narrated *post* — Dr. Wyeth settled in the lead-mine region of northwest Illinois, and married into a prominent family. He died in his adopted state.— ED.

farmers and laborers, brought up to no particular trade) was ready, with his companions, to start off to the Pacific Ocean, the first of March, 1832, to go from Boston to the mouth of Columbia river by land.

I was the youngest of the company, not having attained my twentieth year; but, in the plentitude of health and spirits, I hoped every thing, believed every thing my kinsman, the Captain, believed and said, and all doubts and fears were banished. The Captain used to convene us every Saturday night at his house for many months previous to our departure, to arrange and settle the plan of our future movements, and to make every needful preparation; and such were his thoughtfulness and vigilance, that it seemed to us nothing was forgotten and every thing necessary provided. Our three vehicles, or wagons, if we may call by that name a *unique* contrivance, half boat, and half carriage, may be mentioned as an instance of our Captain's [11] talents for snug contrivance. It was a boat of about thirteen feet long, and four feet wide, of a shape partly of a canoe, and partly of a gondola. It was not calked with tarred oakum, and payed with pitch, lest the rays of the sun should injure it while upon wheels; but it was nicely jointed, and dovetailed. The boat part was firmly connected with the lower, or axletree, or wheel part;—the whole was so constructed that the four wheels of it were to be taken off when we came to a river, and placed in the wagon, while the tongue or shaft was to be towed across by a rope. Every thing was as light as could be consistent with safety. Some of the Cambridge wags said it was a boat begot upon a wagon,—a sort of mule, neither horse nor ass,—a mongrel, or as one of the collegians said it was a thing *amphibious*, anatomically constructed like some equivocal animals, allowing it to crawl upon the land, or to swim on the water; and he therefore thought it ought

to be denominated an *amphibium*. This would have gone off very well, and to the credit of the learned collegian, had not one of the gang, who could hardly write his own name, demurred at it; because he said that it reflected not back the honor due to the ingenious contriver of the commodious and truly original vehicle; and for his part, he thought that if they meant to give it a particular name, that should redound to the glory of the inventor, it ought to be called a *Nat-wye-thium*; and this was instantaneously agreed to by acclamation! Be that as it may, the vehicle did not disgrace the inventive genius of New England. This good-humored raillery, shows the opinion of indifferent people, merely lookers-on. The fact was, the generality [12] of the people in Cambridge considered it a hazardous enterprise, and considerably notional. About this time there appeared some well written essays in the Boston newspapers, to show the difficulty and impracticability of the scheme, purporting to doubt the assertions of Mr. Hall J. Kelly respecting the value and pleasantness of the Oregon territory. The three vehicles contained a gross of axes, a variety of articles, or "*goods*" so called, calculated for the Indian market, among which vermilion and other paints were not forgotten, glass beads, small looking-glasses, and a number of tawdry trinkets, cheap knives, buttons, nails, hammers, and a deal of those articles, on which young Indians of both sexes set a high value, and white men little or none. Such is the spirit of trade and traffic, from the London and Amsterdam merchant, down to an Indian trader and a yankee tin-ware man in his jingling go-cart; in which he travels through Virginia and the Carolinas to vend his wares, and cheat the Southerners, and bring home laughable anecdotes of their simplicity and ignorance, to the temporary disgrace of the common people of the Northern and Eastern part of the Union,

where a travelling tin-man dare hardly show himself,—and yet is held up in the South as the real New-England character, and this by certain white people who know the use of letters!

The company were uniform in their dress. Each one wore a coarse woollen jacket and pantaloons, a striped cotton shirt, and cowhide boots: every man had a musket, most of them rifles, all of them bayonets in a broad belt, together with a large clasped knife for eating and common purposes. The Captain and one or two more added pistols; but [13] every one had in his belt a small axe. This uniformity had a pleasing effect, which, together with their curious wagons, was noticed with commendation in the Baltimore newspapers, as a striking contrast with the family emigrants of husband, wife, and children, who have for thirty years and more passed on to the Ohio, Kentucky, and other territories. The whole bore an aspect of energy, good contrivance, and competent means. I forgot to mention that we carried tents, camp-kettles, and the common utensils for cooking victuals, as our plan was to live like soldiers, and to avoid, as much as possible, inns and taverns.

The real and avowed object of this hardy-looking enterprise was to go to the river Columbia, otherwise called the river *Oregon*, or river of the *West*,<sup>10</sup> which empties by a very wide mouth into the Pacific Ocean, and there and thereabouts commence a fur trade by trafficking with the Indians, as well as beaver and other hunting by ourselves. We went upon shares, and each one paid down so much; and our association was to last during five years. Each man paid our Leader forty dollars. Captain Wyeth was our Treasurer, as well as Commander; and all the expenses of our

---

<sup>10</sup> For the origin of the word Oregon, see Ross's *Oregon Settlers*, in our volume vii, p. 36, note 4.—ED.

travelling on wheels, and by water in steam-boats, were defrayed by our Leader, to whom we all promised fidelity and obedience. For twenty free-born New-England men, brought up in a sort of Indian freedom, to be bound together to obey a leader in all things reasonable, without something like *articles of war*, was, to say the least of it, a hazardous experiment. The Captain and crew of a Nantucket whaling ship came nearest to such an association; for in this case each man runs that great risk of his life, [14] in voluntarily attacking and killing a whale, which could not be expected from men hired by the day, like soldiers; so much stronger does association for gain operate, than ordinary wages. As fighting Indians from behind trees and rocks is next, in point of courage, to attacking a whale, the monarch of the main, in his own element, a common partnership is the only scheme for achieving and securing such dangerous purposes.

We left the city of Boston, 1st of March, 1832, and encamped on one of the numerous islands in its picturesque harbour, where we remained ten days, by way of inuring ourselves to the tented field; and on the 11th of the same month we hoisted sail for Baltimore, where we arrived after a passage of fifteen days,<sup>11</sup> not without experiencing a snow-storm, severe cold, and what the landsmen considered a hard gale, at which I, who had been one voyage to sea, did not wonder. It made every man on board look serious; and glad were we to be set on shore at the fair city of Baltimore, in which are to be found a great number of merchants, traders, and mechanics from different parts of New England, and where of course there are none, or

---

<sup>11</sup> For further accounts of the preparation and voyage to Baltimore on the brig "Ida," consult F. G. Young, "Correspondence and Journals of Captain Nathaniel J. Wyeth, 1831-36," in *Sources of the History of Oregon* (Eugene, Oregon, 1899), pp. 42-50. *Niles' Register* xlii, p. 82 (March 31, 1832), notes their arrival and departure with twenty-two men and all necessary equipment.—ED.

very few, of those ridiculous prejudices against what they call Yankees, that are observable in Virginia and the Carolinas.

At Baltimore our amphibious carriages excited great attention, and I may add, our whole company was an object of no small curiosity and respect. This, said they, is "*Yankee all over!*"—bold enterprise, neatness, and good contrivance. As we carefully avoided the expense of inns and taverns, we marched two miles out of Baltimore, and there encamped during four days; and then we put [15] our wagons into the *cars* on the rail-road; which extends from thence sixty miles, which brought us to the foot of the Alleghany mountains.<sup>12</sup> Quitting the rail-road at the foot of the Alleghany, we encountered that mountain. Here we experienced a degree of inhospitality not met with among the savages. The Innkeepers, when they found that we came from New England, betrayed an unwillingness to accommodate Yankees, from a ridiculous idea, that the common people, so nicknamed, were too shrewd at a bargain and trading, for a slow and straight-forward Dutchman; for the inhabitants of this mountainous region, were generally sons and grandsons of the Dutch and German first settlers; and it cannot be denied and concealed, that the New England land-jobbers were in their bargains too hard for the torpid Dutchman, who, it is true, loved money as much as any people, yet when they, or their fathers had been the sufferers from a set of roving sharpers, it is no wonder that an hereditary prejudice should descend with exaggeration and aggravation from father to son, and that their resentment should visit their innocent sons to the third

---

<sup>12</sup> The line of the Baltimore and Ohio railway was first opened for traffic December 1, 1831, when the road extended as far as Frederick, sixty-one miles from Baltimore. On April 1, 1832, it was extended to Point of Rocks, some forty miles beyond; but by that time the expedition had passed farther west.—ED.

and fourth generation. No one pretends to mention any fact or deed, in which those Dutch foreigners were defrauded of their rights and dues; and all that can be, with truth, said, was, that the land-speculators from Connecticut and Massachusetts were to New-England what Yorkshire men are thought to be to the rest of the people of England, a race more sharp and quick-sighted than their neighbours,—and with a sort of constitutional good humor, called *fun*, they could twist that uneducated progeny of a German stock around their fingers;—hence their reluctance [16] to have any thing to do with men, whose grand-fathers were too knowing for them. You never hear the French or the English complaining of the over-shrewdness of the New-England people. They accord very well together, and very frequently intermarry. No, it is the Dutch, and the descendants of transported convicts, who sneer at those they call Yankees, whom their fathers feared, and of course hated.

At one public house on the mountains near which we halted, the master of it, learning that we came from Boston, refused us any refreshment and lodging. He locked up his bar-room, put the key in his pocket, went out, and came back with four or five of his neighbours, when the disagreement ran so high, that the tavern-keeper and the Yankee Captain each seized his rifle. The latter pointing to the other's *sign* before his door, demanded both lodging and refreshment, as the legal condition of his tavern-license;<sup>13</sup> and the dispute ended in our Captain's sleeping in the house with three of his party, well armed, determined to defend their persons, and to insist on their rights as peaceable and

<sup>13</sup> Taverners are by law to be provided with suitable bedding for travellers, and stables and provisions for horses and cattle. Brownsville is a flourishing town situated on the point, where the great Cumberland road strikes the head of navigation of the Monongahela, and has long been a place of embarkation for emigrants for the West.—WYETH.

unoffending travellers, while the rest of the company bivouacked near their wagons, and reposed themselves, like veteran soldiers, in their tents and wagons.

We gladly departed from the inhospitable Alleghany or Apalachian mountains, which extend from the river St. Lawrence to the confines of Georgia, [17] and which run nearly parallel to the sea-shore from sixty to one hundred and thirty miles from it, and dividing the rivers, which flow into the Atlantic on the east, from those that run into the lakes and into the Mississippi on the west. The part we passed was in the state of Pennsylvania. Our next stretch was for the river Monongahela, where we took the steamboat for *Pittsburg*.<sup>14</sup> This town has grown in size and wealth, in a few years, surprisingly. It is two hundred and thirty miles from Baltimore; three hundred from Philadelphia. It is built on a point of land jutting out towards the river Ohio, and washed on each side by the Alleghany and Monongahela, which rivers uniting are lost in the noble Ohio. It was originally a fortress built by the French, called *Fort du Quesne*; being afterwards taken by the English in 1759, it was called fort *Pitt*, in honor of the famous *William Pitt*, afterwards Earl of Chatham, under whose administration it was taken from the French, together with all Canada.<sup>15</sup> On this spot a city has been reared by the Americans, bearing the name of *Pittsburg*, which has thriven in a surprising manner by its numerous manufactories in glass, as well as in all the metals in common use. To call it the Birmingham of America is to underrate its various

---

<sup>14</sup> The expedition proceeded by way of Brownsville, and arrived at Pittsburg on April 8, 1832. Pittsburg, as the point of departure for the West, is described by most early travelers. In particular, consult Cuming's *Tour*, in our volume iv, pp. 242-255.—ED.

<sup>15</sup> For Fort Duquesne, see F. A. Michaux's *Travels*, in our volume iii, p. 156, note 20; for Fort Pitt, Post's *Journals*, in our volume i, p. 281, note 107, and A. Michaux's *Travels*, volume iii, p. 32, note 11.—ED.

industry; and to call the English Birmingham Pittsburg, would be to confer upon that town additional honor; not but what the British Birmingham is by far the most pleasant place to live in. Pittsburg is the region of iron and fossil coal, of furnaces, glass-works, and a variety of such like manufactures. This town has somewhat the color of a coal-pit, or of a black-smith's shop. The wonder is, that any gentleman [18] of property should ever think of building a costly dwelling-house, with corresponding furniture, in the coal region of the western world; but there is no disputing *de gustibus* — *Chacun á son gout*. The rivers and the surrounding country are delightful, and the more so from the contrast between them and that hornet's nest of bustle and dirt, the rich capital. Thousands of miserable culprits are doomed to delve in deep mines of silver, gold, and quicksilver among the Spaniards for thier crimes; but here they are all freemen, who choose to breathe smoke, and swallow dirt, for the sake of clean dollars and shining eagles. Hence it is that the Pittsburgh workmen appear, when their faces are washed, with the ruddiness of high health, the plenitude of good spirits, and the confidence of freemen.

From the busy city of thriving Pittsburg our next important movement was down the Ohio. We accordingly embarked in a very large steam-boat called The Freedom; and soon found ourselves, bag and baggage very much at our ease and satisfaction, on board a truly wonderful floating inn, hotel, or tavern, for such are our steam-boats. Nothing of the kind can surpass the beauty of this winding river, with its fine back-ground of hills of all shapes and colors, according to the advancement of vegetation from the shrubs to the tallest trees. But the romantic scenery on both sides of the Ohio is so various and so captivating to a stranger, that it requires the talents of a painter to give

even a faint idea of the picture; and the effect on my mind was, not to estimate them as I ought, but to feed my deluded imagination with the belief that we should find on the [19] Missouri, and on the Rocky Mountains, and Columbia river, object as much finer than the Ohio afforded, as this matchless river exceeded our Merrimac or Kennebeck: and so it is with the youth of both sexes; not satisfied with the present gifts of nature, they pant after *the untried scene*, which imagination is continually bodying forth, and time as constantly dissipating.

The distance from Pittsburg to the Mississippi is about one thousand miles. Hutchins estimated it at one thousand one hundred and eighty-eight,—Dr. Drake at only nine hundred and forty-nine.<sup>16</sup> Wheeling is a town of some importance. Here the great national road into the interior from the city of Washington, meets that of Zanesville, Chillicothe, Columbus, and Cincinnati.<sup>17</sup> It is the best point to aim at in very low stages of the water, and from thence boats may go at all seasons of the year. We passed Marietta, distinguished for its remarkable remains of mounds, and works, resembling modern fortifications, but doubtless the labor of the ancient aboriginals, of whom there is now no existing account; but by these works, and articles found near them, they must have belonged to a race of men

---

<sup>16</sup> Thomas Hutchins (1730-89), born in New Jersey, entered the British army at an early age. He served in the French and Indian War, and later as assistant engineer under Bouquet (1764), for whom he prepared a map. In 1779 he was arrested in London, on a charge of sympathizing with the American cause. Escaping to Paris, he finally joined the continental army at Charleston, South Carolina, and was made geographer general by General Greene. The estimate here referred to is in his *Topographical Description of Virginia, Pennsylvania, Maryland, and North Carolina* (London, 1778), p. 5.

For Dr. Daniel Drake, see Flint's *Letters* in our volume ix, p. 121, note 61.

The length of the Ohio from Pittsburg is estimated by the map of the U. S. corps of engineers, published in 1881, as 967 miles.—ED.

<sup>17</sup> For Wheeling and the National Road, see A. Michaux's *Travels*, in our volume iii, p. 33, note 15, and Flint's *Letters*, in our volume ix, p. 105, notes 51, 52.—ED.

farther advanced in arts and civilization than the present Indian in that region,<sup>18</sup> — a people who, we may well suppose, were the ancestors of the Mexicans. Yet we see at this time little more than log-houses belonging to miserable tenants of white people. All the sugar used by the people here is obtained from the maple tree. Fossil coal is found along the banks. There is a creek pouring forth *Petroleum*, about one hundred miles from Pittsburg on the Alleghany, called *Oil Creek*, which will blaze on the application of a [20] match. This is not uncommon in countries abounding in bituminous coal. Nitre is found wherever there are suitable caves and caverns for its collection. The people here are rather boisterous in their manners, and intemperate in their habits, by what we saw and heard, more so than on the other side of the river where slavery is prohibited. Indeed slavery carries a black moral mark with it visible on those whose skins are naturally of a different color; and Mr. Jefferson's opinion of the influence of slavery on the whites, justifies our remark.<sup>19</sup>

We stopped one day and night at the flourishing town of *Cincinnati*, the largest city in the Western country, although laid out so recently as 1788.<sup>20</sup> It is twenty miles above the mouth of the Great Miami, and four hundred and sixty-five miles below Pittsburg. It appears to great advantage from the river, the ground inclining gradually to the water. Three of us had an evidence of that by a mischievous trick for which we deserved punishment. We were staring about

---

<sup>18</sup>For a more extended description of Marietta and its antiquities, consult Cuming's *Tour*, in our volume iv, pp. 123-125. The mounds are now believed to be the work of North American Indians; consult Cyrus Thomas, "Mound Explorations," in U. S. Bureau of Ethnology *Report*, 1890-91.— ED.

<sup>19</sup>Referring to Jefferson's account of the degradation of masters under the régime of slavery, in *Notes on Virginia* (original edition, 1784), pp. 298-301.— ED.

<sup>20</sup>For the early history of this city, see Cuming's *Tour*, our volume iv, p. 256, note 166.— ED.

the fine city that has risen up with a sort of rapid, mushroom growth, surprising to every one who sees it, and who considers that it is not more than forty years old. In the evening we went into a public house, where we treated ourselves with that sort of refreshment which inspires fun, frolic, and mischief. We remained on shore till so late an hour that every body appeared to have gone to bed, when we set out to return to our steam-boat. In our way to it we passed by a store, in the front of which stood three barrels of lamp-oil, at the head of a fine sloping street. The evil spirit of mischief put it into our heads to set them a rolling down the inclined plane to the river. No sooner hinted, than executed. [21] We set all three a running, and we ran after them; and what may have been lucky for us, they were recovered next day whole. Had there been legal inquisition made for them, we had determined to plead *character*, that we were from Boston, the land of steady habits and good principles, and that it must have been some gentlemen Southerners, with whose characters for nightly frolics, we, who lived within sound of the bell of the University of Cambridge were well acquainted. The owners of the oil came down to the steam-boat, and carried back their property without making a rigid examination for the offenders; without suspecting that prudent New-England young men would indulge in a wanton piece of fun, where so much was at stake. But John Bull and Jonathan are queer fellows.

From Cincinnati to St. Louis, we experienced some of those disagreeable occurrences, that usually happen to democratical adventurers. Our Captain, to lessen the expenses of the expedition, had bargained with the Captain of the steam-boat, that we of his band should assist in taking on board wood from the shore, to keep our boilers from cooling. Although every one saw the absolute necessity

of the thing, for our common benefit and safety, yet some were for demurring at it, as not previously specified and agreed upon. Idleness engenders mutiny oftener than want. In scarcity and in danger men cling together like gregarious animals; but as soon as an enterprising gang can sit down, as in a steam-boat, with nothing to do but to find fault, they are sure to become discontented, and discontent indulged leads to mutiny. Whatever I thought then, I do not think now that Captain Wyeth was [22] to blame for directing his followers to aid in *wooding*; nor should the men have grumbled at it. I now am of opinion that our aiding in wooding the steam-boat was right, reasonable, and proper. Every man of us, except the surgeon of the company, Dr. Jacob Wyeth, ought, on every principle of justice and generosity, to have given that assistance.

Our navigation from Cincinnati to St. Louis was attended with circumstances new, interesting, and very often alarming. Passing the rapids of the Ohio, or *falls* as they are called, between the Indiana territory and Kentucky, was sufficiently appalling to silence all grumbling. These falls, or rapids are in the vicinity of Louisville, Jeffersonville, Clarksville, and Shipping-port, and are really terrific to an inexperienced farmer or mechanic.<sup>21</sup> Our Hell-gate in Long-Island Sound is a common brook compared with them; and when we had passed through them into the Mississippi, the assemblage of trees in the river, constituting snags and sawyers, offered themselves as a species of risk and danger, which none of us had ever calculated on or dreamt of. We knew that there was danger in great storms, of huge trees blowing down on one's head; and

---

<sup>21</sup> Wyeth somewhat exaggerates the difficulties of the navigation of the Falls of the Ohio. See our volume i, p. 136, note 106; also Thwaites, *On the Storied Ohio* (Chicago, 1903), pp. 218-222. For Jeffersonville, see Flint's *Letters*, in our volume ix, p. 160, note 80; for Clarksville and Shippingsport, Cuming's *Tour*, our volume iv, pp. 259, 260, notes 170, 171.—ED.

that those who took shelter under them in a thunder-storm, risked their lives from lightning; but to meet destruction from trees in an immense river, seemed to us a danger of life, which we had not bargained for, and entirely out of our agreement and calculation. We had braced ourselves up only against the danger of hostile Indians, and enraged beasts, which we meant to war against. Beyond that, all was smooth water to us. The truth of the matter is,— [23] the men whom Captain Wyeth had collected were not the sort of men for such an expedition. They were too much on an equality to be under strict orders like soldiers. Lewis & Clarke were very fortunate in the men they had under them. Major Long's company was, in a great degree, military, and yet three of his soldiers deserted him at one time, and a fourth soon after.<sup>22</sup>

On the 18th of April, 1832, we arrived at St. Louis. As we had looked forward to this town, as a temporary resting-place, we entered it in high spirits, and pleased ourselves with a notion that the rest of our way till we should come to the Rocky Mountains would be, if not down hill, at least on a level: but we counted without our host.

*St. Louis* was founded by a Frenchman named *Peter la Clade* in 1764, eighty-four years after the establishment of Fort Crève-cœur on the Illinois river; and inhabited entirely by Frenchmen and the descendants of Frenchmen, who had carried on for the most part a friendly and lucrative trade with the Indians.<sup>23</sup> But since the vast Western country has been transferred to the United States, its population has been rapidly increased by numerous individuals and families from different parts of the Union; and its

---

<sup>22</sup> See our volumes xiv-xvii for James's *Long's Expedition*.— ED.

<sup>23</sup> For the foundation of St. Louis, see A. Michaux's *Travels*, in our volume iii, p. 71, note 138. Fort Crève-cœur was La Salle's Illinois stockade, built in 1680. See Ogden's *Letters* in our volume xix, p. 46, note 34.— ED.

business extended by enterprising mechanics and merchants from the New-England States; and its wealth greatly augmented. The old part of St. Louis has a very different aspect from that of Cincinnati, where every thing appears neat, and new, and tasteful; as their public buildings, their theatre, and spacious hotels, not forgetting Madam Trollope's bazar, or, as it is commonly called, "Trollope's Folly,"<sup>24</sup> as well as its spacious streets, numerous coaches, and other [24] marks of rapid wealth, and growing luxury. As St. Louis has advanced in wealth, magnitude, and importance, it has gradually changed the French language and manners, and assumed the American. It however contains, I am told, many of the old stock that are very respectable for their literary acquirements and polished manners.

We shall avoid, as we have avowed, any thing like censure of Captain Wyeth's scheme during his absence; but when we arrived at St. Louis, we could not but lament his want of information, respecting the best means of obtaining the great objects of our enterprise. Here we were constrained to sell our complicated wagons for less than half what they originally cost. We were convinced that they were not calculated for the rough roads, and rapid streams and eddies of some of the rivers we must necessarily pass. We here thought of the proverb, "that men never do a thing right the first time." Captain Wyeth might have learned at St. Louis, that there were two wealthy gentle-

---

<sup>24</sup> Frances Milton Trollope (1780-1863), an Englishwoman of note, came to the United States in 1827 with Frances Wright. She established herself at Cincinnati, and attempted to recuperate the family fortunes by the opening of a bazaar for the sale of small fancy articles. The experiment failed, and the Trollope family returned to England (1831), where Mrs. Trollope issued *Domestic Manners of Americans* (London, 1832), a criticism of our national customs that gave great umbrage to our forebears in the West. She later became a novelist of note, dying in Florence in 1863. Her sons were Anthony and Adolphus Trollope, well-known English authors.—ED.

men who resided at or near that place, who had long since established a regular trade with the Indians, Mr. M——, and a young person, Mr. S——, and that a stranger could hardly compete with such established traders. The turbulent tribe, called the *Black-foot* tribe, had long been supplied with fire arms and ammunition, beads, vermilion and other paints, tobacco and scarlet cloth, from two or three capital traders at, or near, St. Louis, and every article most saleable with the Indians. Both parties knew each other, and had confidence in each other; and having this advantage over our band of adventurers, it does not appear that Mr. Mackenzie, and Mr. Sublet felt any apprehensions or jealousy [25] of the new comers from Boston; but treated them with friendship, and the latter with confidence and cordiality; the former gentleman being, in a manner, retired from business, except through numerous agents.<sup>25</sup> He

<sup>25</sup> Kenneth McKenzie was born in Rossshire, Scotland, in 1801, of a good family, relatives of Sir Alexander Mackenzie the explorer. Coming to America at an early age, young McKenzie entered the service of the North West Company; but upon its consolidation with the Hudson's Bay Company (1821), he entered the fur-trade on his own account. Going to New York in 1822, he secured an outfit on credit, and for some time traded on the upper Mississippi. Later he formed a partnership with Joseph Renville in the establishment of the Columbia Fur Company. This concern was bought out by its rival, the American Fur Company in 1827, whereupon McKenzie was taken into the latter corporation. He was soon placed in command of what was known as the "Upper Missouri Outfit," and built Fort Union at the mouth of the Yellowstone, where for several years he ruled almost regally. Among his earliest successes — to which Wyeth here refers — was his acquisition of the Blackfoot trade. This tribe, influenced by British traders, had long been hostile to Americans; McKenzie had, however, been known to them in the North West Company, and through one of their interpreters, Berger, he secured a treaty with them and built (1831-32) a post in their country. McKenzie lost the good-will of the American Fur Company, by erecting a distillery at Fort Union, in defiance of United States laws. In 1834 he came down the river, and visited Europe; but at intervals he re-ascended to his old post, until in 1839 he disposed of his stock in the company. He then made his home in St. Louis, until his death in 1861. It does not appear that he had considered retirement as early as Wyeth's visit in 1832, for he was then in the full tide of success. He lived magnificently at Fort Union, ruling over a wide territory, an American example of the "bourgeois of the old Northwest."

For William Sublette, see our volume xix, *Gregg's Commerce of the Prairies*, p. 221, note 55.— ED.

owns a small steam-boat called the Yellow Stone, the name of one of the branches of the Missouri river.<sup>26</sup> Through such means the Indians are supplied with all they want; and they appeared not to wish to have any thing to do with any one else, especially the adventurous Yankees. These old established traders enjoy a friendly influence, or prudent command, over those savages, that seems to operate to the exclusion of every one else; and this appeared from the manner in which they treated us, which was void of every thing like jealousy, or fear of rivalship. Their policy was to incorporate us with their own troop.

We put our goods, and other baggage on board the steam-boat Otter, and proceeded two hundred and sixty miles up the Missouri river, which is as far as the white people have any settlements. We were obliged to proceed very slowly and carefully on account of the numerous *snags* and *sawyers* with which this river abounds. They are trees that have been loosened, and washed away from the soft banks of the river. They are detained by sand-banks, or by other trees, that have floated down some time before. Those of them whose sharp branches point opposite the stream are the *snags*, against which boats are often impelled, as they are not visible above water, and many are sunk by the wounds these make in their bows. The *sawyers* are also held fast by their roots, while the body of the tree whips up and down, alternately visible and concealed beneath the surface. These [26] are the chief terrors of the Missouri and the Mississippi rivers. As

---

<sup>26</sup> The "Yellowstone" was the first steamboat to visit the upper Missouri. McKenzie and Pierre Chouteau, Jr., convinced of the utility to the fur-trade of such a craft, persuaded the American Fur Company to secure a steamer. She was built at Louisville, Kentucky, in the winter of 1830-31, departing from St. Louis on her first voyage, April 16, 1831, with Captain B. Young as master. This season she ascended to Fort Tecumseh (near Pierre), and the following year made her initial trip to the mouth of the Yellowstone River. She had left St. Louis about a month before the arrival of Wyeth's party.—ED.

to crocodiles they are little regarded, being more afraid of man than he of them. On account of these snags and sawyers, boatmen avoid passing in the night, and are obliged to keep a sharp look out in the day-time. The sawyers when forced to the bottom or near it by a strong current, or by eddies, rise again with such force that few boats can withstand the shock. The course of the boat was so tediously slow, that many of us concluded to get out and walk on the banks of the river. This, while it gave us agreeable exercise, was of some service in lightening our boat, for with other passengers from St. Louis, we amounted to a considerable crew. The ground was level, and free from underwood. We passed plenty of deer, wild turkeys, and some other wild fowl unknown to us, and expected to find it so all the way.

We arrived at a town or settlement called *Independence*.<sup>27</sup> This is the last white settlement on our route to the Oregon, and this circumstance gave a different cast to our peregrination, and operated not a little on our hopes, and our fears, and our imaginations. Some of our company began to ask each other some serious questions; such as, Where are we going? and what are we going for? and sundry other questions, which would have been wiser had we asked them before we left Cambridge, and ruminated well on the answers. But *Westward ho!* was our watchword, and checked all doubts, and silenced all expressions of fear.

Just before we started from this place, a company of sixty-two in number arrived from St. Louis, under the command of *William Sublet, Esq.*, an experienced Indian trader, bound, like ourselves, [27] to the American Alps, the Rocky Mountains, and we joined company with him,

---

<sup>27</sup> For Independence, see Gregg's *Commerce of the Prairies*, in our volume xix, p. 189, note 34.—ED.

and it was very lucky that we did. Our minds were not entirely easy. We were about to leave our peaceable country-men, from whom we had received many attentions and much kindness, to go into a dark region of savages, of whose customs, manners, and language, we were entirely ignorant,—to go we knew not whither,—to encounter we knew not what. We had already sacrificed our amphibious wagons, the result of so much pains and cost. Here two of our company left us, named Kilham and Weeks. Whether they had any real cause of dissatisfaction with our Captain, or whether they only made that an excuse to quit the expedition and return home early, it is not for me to say. I suspect the abandonment of our travelling vehicles cooled their courage. We rested at Independence ten days; and purchased, by Captain Sublet's advice, two yoke of oxen, and fifteen sheep, as we learnt that we ought not to rely entirely upon transient game from our fire-arms for sustenance, especially as we were now going among a savage people who would regard us with suspicion and dread, and treat us accordingly. From this place we travelled about twenty-five miles a day.

Nothing occurred worth recording, till we arrived at the first Indian settlement, which was about seventy miles from Independence.<sup>28</sup> They appeared to us a harmless people, and not averse to our passing through their country. Their persons were rather under size, and their complexion dark. As they lived near the frontier of the whites, they were not unacquainted with their usages and customs. They have cultivated spots or little farms, [28] on which they raise corn and pumpkins. They generally go out once a year to hunt, accompanied by their women;

---

<sup>28</sup> This appears to have been an insignificant village of somewhat sedentary Indians, probably of the Kansa tribe, near the northwestern corner of what is now Douglas County, Kansas. Joel Palmer notes it in 1845; see our volume xxx.—ED.

and on killing the Buffalo, or Bison, what they do not use on the spot, they dry to eat through the winter. To prevent a famine, however, it is their custom to keep a large number of dogs; and they eat them as we do mutton and lamb. This tribe have imitated the white people in having fixed and stationary houses. They stick poles in the ground in a circular form, and cover them with buffalo-skins, and put earth over the whole, leaving at the top an aperture for the smoke, but small enough to be covered with a buffalo-skin in case of rain or snow.— We found here little game; but honey-bees in abundance.

We travelled on about a hundred miles farther, when we came to a large *prairie*, which name the French have given to extensive tracts of land, mostly level, destitute of trees, and covered with tall, coarse grass. They are generally dreary plains, void of water, and rendered more arid by the Indian custom of setting fire to the high grass once or twice a year to start the game that has taken shelter there, which occasions a hard crust unfavorable to any vegetable more substantial than grass. At this unpromising spot, three more of our company took French leave of us, there being, it seems, dissatisfaction on both sides; for each complained of the other. The names of the seceders were Livermore, Bell, Griswell.<sup>29</sup> In sixteen days more we reached the River *La Platte*, the water of which is foul and muddy.<sup>30</sup> We were nine days passing this dreary *prairie*.

---

<sup>29</sup> Thomas Livermore was a cousin of Nathaniel Wyeth, whose home was in Milford, New Hampshire. He was a minor, and his father's consent was essential that he might join the party.

Bell appears to have been insubordinate from the start, and upon his return to the East, published letters injurious to Wyeth's reputation; consult Wyeth, *Oregon Expeditions*, index.— ED.

<sup>30</sup> For the River Platte, see our volume xiv, p. 219, note 170. The Oregon Trail from Independence led westward, south of the Kansas, crossing the latter stream near the present site of Topeka; thence up the Big and Little Blue rivers, and across country to the Platte, coming in near Grand Island.— ED.

We were seven and twenty days winding our way along the borders of the La Platte, which river we could not leave on [29] account of the scarcity of water in the dry and comfortless plains. Here we slaughtered the last of our live stock, and at night we came to that region where buffaloes are often to be found; but we suffered some sharp gnawings of hunger before we obtained one, and experienced some foretaste of difficulties to come.

The Missouri Territory<sup>31</sup> is a vast wilderness, consisting of immense plains, destitute of wood and of water, except on the edges of streams that are found near the turbid La Platte. This river owes its source to the Rocky mountains, and runs pretty much through the territory, without enlivening or fructifying this desert. Some opinion may be formed of it by saying that for the space of six hundred miles, we may be said to have been deprived of the benefits of two of the elements, *fire* and *water*. Here were, to be sure, buffaloes, but after we had killed them we had no wood or vegetables of any kind wherewith to kindle a fire for cooking. We were absolutely compelled to dry the dung of the buffalo as the best article we could procure for cooking our coarse beef. That grumbling, discontent, and dejection should spring up amongst us, was what no one can be surprised at learning. We were at times very miserable, and our commander could be no less so; but we had put our hands to the plough, and most of us were too

---

<sup>31</sup> The Territory of Missouri was formed in 1812 of all the Louisiana Purchase outside the limits of the newly-erected state of Louisiana. In 1819 Arkansas Territory was cut out, and the following year the state of Missouri. The remaining region was left with no definite organization; but by an act of 1830 it was defined as Indian Territory — south of a line drawn from Missouri River at the mouth of the Ponca, and west to the Rocky Mountains. This vast unorganized region was indefinitely called Missouri Territory, Indian Territory, Western Territory, and even (on one map of the period) Oregon Territory — although the latter name was usually confined to the region west of the Rockies, and north of Mexican bounds.— ED.

stuffy to flinch, and sneak off for home without reaching the Rocky Mountains; still hunger is hunger, and the young and the strong feel the greatest call for food. Every one who goes to sea may lay his account for coming to short allowance, from violent storms, head winds, damaged vessel, and the like; but for a band of New-England [30] men to come to short allowance upon land, with guns, powder, and shot, was a new idea to our Oregon adventurers, who had not prepared for it in the article of hard bread, or flour, or potatoes, or that snug and wholesome article, *salt fish*, so plenty at Marblehead and Cape Ann, and so convenient to carry. When the second company shall march from the seat of science, Cambridge, we would advise them to pack up a few quintals of salt fish, and a few pounds of ground sago, and salep, as a teaspoonful of it mixed with boiling water will make three pints of good gruel, and also a competent supply of portable soup.

Buffaloes were plenty enough. We saw them in frightful droves, as far as the eye could reach, appearing at a distance as if the ground itself was moving like the sea. Such large armies of them have no fear of man. They will travel over him and make nothing of him. Our company after killing ten or twelve of them, never enjoyed the benefit of more than two of them, the rest being carried off by the wolves before morning. Beside the scarcity of meat, we suffered for want of good and wholesome water. The La Platte is warm and muddy; and the use of it occasioned a diarrhœa in several of our company. Dr. Jacob Wyeth, brother of the Captain, suffered not a little from this cause.—Should the reader wonder how we proceeded so rapidly on our way without stopping to inquire, he must bear in mind that we were still under the guidance of Captain Sublet, who knew every step of the way, and had actually resided four years in different green valleys that are here

and there in the Rocky Mountains. To me it seems that we must have perished for want of [31] sustenance in the deserts of Missouri, had we been by ourselves. It may have been good policy in Sublet, to attach us to him. He probably saw our rawness in an adventure so ill provided for as ours actually was. But for him we should hardly have provided ourselves with live stock; and but for him we should probably never have reached the American Alps. By this time every man began to think for himself.

We travelled six days on the south branch of the La Platte, and then crossed over to the north branch, and on this branch of it, we travelled eighteen days.<sup>32</sup> But the first three days we could not find sufficient articles of food; and what added to our distress was the sickness of several of our company. We noticed many trails of the savages, but no Indians. The nearer we approached the range of the mountains the thicker were the trees. After travelling twelve days longer we came to the Black Hills. They are so called from their thick growth of cedar. Here is the region of rattle snakes, and the largest and fiercest bears,—a very formidable animal, which it is not prudent for a man to attack alone. I have known some of the best hunters of Sublet's company to fire five and six balls at one before he fell. We were four days in crossing these dismal looking hills. They would be called mountains, were they not in the neighborhood of the Rocky Mountains, whose peaks overtop every thing, and elevate themselves into the region of everlasting frost and snow. Our sick suffered extremely in ascending these hills, some of them slipped off the horses and mules they rode on, from sheer weakness, brought on by the bowel complaint already mentioned; among these was Dr. [32] Wyeth, our

---

<sup>32</sup> The Oregon trail touched the North Platte at Ash Creek, now an important railway junction in Deuel County, Nebraska.—ED.

Captain's brother, who never had a constitution fit to encounter such an expedition. And yet we could not leave them under the care of a man, or two or three men, and pass on without them, to follow us, when they were able. It was to me particularly grievous to think that he, who was to take care of the health of the company, was the first who was disabled from helping himself or others, and this one a blood relation. It required a man of a firmer make than Dr. Jacob Wyeth to go through such a mountainous region as the one we were in: a man seldom does a thing right the first time.

From the north branch we crossed over to what was called Sweet-water Creek.<sup>33</sup> This water being cool, clear, and pleasant, proved a good remedy for our sick, as their bowel complaints were brought on and aggravated by the warm, muddy waters of the Missouri territory we had passed through. We came to a huge rock in the shape of a bowl upside down. It bore the name of Independence, from, it is said, being the resting-place of Lewis and Clarke on the 4th of July; but according to the printed journal of those meritorious travellers, they had not reached, or entered, the American Alps on the day of that memorable epoch.<sup>34</sup> Whether we are to consider the rock Independence as

---

<sup>33</sup> Sweetwater River, a western affluent of the North Platte, rises in the Wind River Mountains, and for over a hundred miles flows almost directly east. The name is supposed to be derived from the loss at an early day of a pack-mule laden with sugar. Wyeth speaks of "crossing over" to this stream, because the trail abandoned the North Platte, which here flows through a formidable cañon, and reached the Sweetwater some miles above its mouth.—ED.

<sup>34</sup> Lewis and Clark did not pass within hundreds of miles of Independence Rock, having ascended the Missouri to its source. Independence Rock is a well-known landmark on the Oregon Trail — an isolated mass covering twenty-seven acres, and towering 155 feet above Sweetwater River. On it were marked the names of travelers, so that it became the "register of the desert." Frémont in 1843 says, "Many a name famous in the history of this country, and some well known to science are to be found mixed with those of the traders and of travelers for pleasure and curiosity, and of missionaries to the savages."—ED.

fairly in the Rocky Mountains, let others determine. We had now certainly begun our ascent to those lofty regions, previous to which we had to pass the chief branch of the river La Platte; but we had no boat whatever for the purpose; and had we not been in the company of Captain Sublet, it is hard to say what we should have done short of going a great way round. Here I, and others were entirely [33] convinced that we were engaged in an expedition without being provided with the means to accomplish it. Our boats and wagons we had disposed of at St. Louis, and here we were on the banks of a river without even a canoe. Captain Clarke brought his canoes to the foot of the range of mountains and there left them. The reader will understand that not only the Missouri river, but the Yellowstone river, the La Platte, and many other smaller ones commence by small beginnings in the Black Hills, and in the Rocky Mountains, and increase in size and depth as they proceed down to join the Arkansa, or the Canadian river, and finally the Mississippi, and so run into the vast salt ocean. Whether it was Captain Sublet's own invention, or an invention of the Indians, we know not, but the contrivance we used is worth mentioning. They called it a *Bull-boat*. They first cut a number of willows (which grow every where near the banks of all the rivers we had travelled by from St. Louis), of about an inch and a half diameter at the butt end, and fixed them in the ground at proper distances from each other, and as they approached nearer one end they brought them nearer together, so as to form something like the bow. The ends of the whole were brought and bound firmly together, like the ribs of a great basket; and then they took other twigs of willow and wove them into those stuck in the ground so as to make a sort of firm, huge basket of twelve or fourteen feet long. After this was completed, they sewed together a number

of buffalo-skins, and with them covered the whole; and after the different parts had been trimmed off smooth, a slow fire was made under the Bull-boat, taking care to dry the skins moderately; and as [34] they gradually dried, and acquired a due degree of warmth, they rubbed buffalo-tallow all over the outside of it, so as to allow it to enter into all the seams of the boat, now no longer a willow-basket. As the melted tallow ran down into every seam, hole, and crevice, it cooled into a firm body capable of resisting the water, and bearing a considerable blow without damaging it. Then the willow-ribbed, buffalo-skin, tallowed vehicle was carefully pulled up from the ground, and behold a boat capable of transporting man, horse, and goods over a pretty strong current. At the sight of it, we Yankees all burst out into a loud laugh, whether from surprise, or pleasure, or both, I know not. It certainly was not from ridicule; for we all acknowledged the contrivance would have done credit to *old* New-England.

While Captain Sublet and his company were binding the gunwale of the boat with buffalo-sinews, to give it strength and due hardness, our Captain was by no means idle. He accordingly undertook to make a raft to transport our own goods across the river. Sublet expressed his opinion that it would not answer where the current was strong; but Captain Wyeth is a man not easily to be diverted from any of his notions, or liable to be influenced by the advice of others; so that while Sublet's men were employed on their Bull-boat, Wyeth and a chosen few were making a raft. When finished, we first placed our blacksmith's shop upon it, that is to say, our anvil, and large vice, and other valuable articles belonging to blacksmithery, bar-iron, and steel traps, and alas! a cask of powder, and a number of smaller, but valuable articles. We fixed a rope to our raft, and with some difficulty got [35] the other

end of it across the river to the opposite bank by a man swimming with a rope in his mouth, from some distance above the spot he aimed to reach. We took a turn of it round a tree. Captain Sublet gave it as his opinion that the line would not be sufficient to command the raft. But our Leader was confident that it would; but when they had pulled about half way over, the rope broke, and the raft caught under the limbs of a partly submerged tree, and tipped it on one side so that we lost our iron articles, and damaged our goods and a number of percussion caps. This was a very serious calamity and absolutely irreparable. Almost every disaster has some benefit growing out of it. It was even so here. Two thirds of our company were sick, and that without any particular disorder that we can name, but from fatigue, bad water, scanty food, and eating flesh half raw. Add to this, worry of mind, and serious apprehensions of our fate when the worthy Captain Sublet should leave us; for he was, under Providence, the instrument of our preservation. Our own individual sufferings were enough for us to bear; but Captain Wyeth had to bear the like, and more beside, as the responsibility lay heavy upon him. Most men would have sunk under it. At this point of our journey we were sadly tormented by musquetoos, that prevented our sleep after the fatigues of the day. This little contemptible insect, which they call here a gnat, disturbed us more than bears, or wolves, or snakes.

The next day after we started from this unlucky place, we descried a number of men on horseback, approaching us at full speed. Various were our conjectures. Captain Sublet had an apprehension that they might be hostile Indians who fight on [36] horseback; he therefore ordered every man to make fast his horse as quick as possible, and prepare for battle on foot. But on their near approach,

we found them a body of white men called *trappers*, whose occupation is to entrap the beaver and other animals that have valuable furs. Captain Sublet has, for several years, had about two hundred of these trappers in his pay, in and around the Rocky Mountains, and this troop was a party of them. His place of rendezvous for them is at *Pierre's Hole*, by which name they call one of those deep and verdant valleys which are to be found in the Rocky Mountains from the eastern boundary of them to their extreme edge in the west, where the Oregon or Columbia river commences under the name of Clark's river, some branches of which inosculate with the mighty Missouri on the east. It is to *Pierre's valley or Hole*, that his trappers resort to meet their employer every summer. It is here they bring their peltry and receive their pay; and this traffic has been kept up between them a number of years with good faith on both sides, and to mutual satisfaction and encouragement. When Sublet leaves St. Louis, he brings up tobacco, coffee, rice, powder, shot, paint, beads, handkerchiefs and all those articles of finery that please both Indian women and men; and having established that sort of traffic with his friends, the Indians on and in the vicinity of the Rocky Mountains, what chance was there that any small band from Boston, or even Cambridge, could supplant him in the friendship and confidence of his old acquaintance, the Shoshonees, the Black-feet, or any other tribe? He must have seen this at once, and been convinced that nothing like rivalry could [37] rise up between him and the New-England adventurers. He therefore caressed them, and, in a manner, incorporated them with his troop.

This gentleman was born in America of French parents,<sup>35</sup>

---

<sup>35</sup> Captain William Sublette was born in Kentucky. His maternal grandfather was Captain Whitby, a noted pioneer of Irish ancestry. The Sublettes were also of Kentucky stock; and if French originally, came early to America. See our volume xix, p. 221, note 55 (Gregg).—ED.

and partakes largely of those good-humored, polite, and accommodating manners which distinguish the nation he sprang from. The old French war, and wars on this continent since then, amply prove how much better Frenchmen conciliate the natives than the English. The English and the Americans, when they come in contact with the untutored savage, most commonly fight. But not so the French. They please and flatter the Indian, give him powder, and balls, and flints, and guns, and make a Catholic of him, and make out to live in friendship with the red man and woman of the wilderness. It is strange that such extremes of character should meet. Some have said that they are not so very far distant as others have imagined,—that the refined French people love war, and the women paint their faces, grease their hair, and wear East India blankets, called shawls.—Captain Sublet possesses, doubtless, that conciliating disposition so characteristic of the French, and not so frequently found among the English or Americans; for the descendants of both nations bear strong marks of the stock they came from. The French have always had a stronger hold of the affections of the Indians than any other people.

The trappers kept company with us till we came to Pierre's Hole, or valley, which is twelve miles from the spot where we first met them. Three or four days after, we were fired on by the Indians about ten o'clock at night. They had assembled to about the number of three hundred. They stole [38] five horses from us, and three from Sublet's company.<sup>36</sup> About the first of July we crossed the highest part or ridge of the mountains.<sup>37</sup> In addition to the moun-

<sup>36</sup> This attack was attributed to the same band of Blackfeet with whom the Battle of Pierre's Hole occurred some days later. See Wyeth, *Oregon Expeditions*, p. 158; Irving, *Rocky Mountains*, i, p. 75.—ED.

<sup>37</sup> This is South Pass, so named in contradistinction to the northern passes undertaken by Lewis and Clark. It is not known by whom this mountain passage

tain composed of earth, sand, and stone, including common rocks, there were certain peaks resembling a loaf of sugar, from a hundred to two hundred feet high; and some appeared much higher; I cannot guess their height. They were to us surprising. Their sides deviated but little from perpendicular. They looked at a distance like some light-houses of a conical form, or like our Cambridge glass manufactories; but how they acquired that form is wonderful. Subsiding waters may have left them so, after washing away sandy materials. But nature is altogether wonderful, in her large works as well as small. How little do we know of the first cause of any thing! We had to creep round the base of these steep edifices of nature. We now more clearly understand and relish the question of one of our Indians who was carried to England as a show, who, on being shown that elegant pile of stone, the cathedral of St. Paul, after viewing it in silent admiration, asked his interpreter *whether it was made by men's hands, or whether it grew there*. We might ask the same question respecting these conical mountains. Had the scaffolding of St. Paul's remained, the surprise and wonder of the sensible savage had been less.

It was difficult to keep our feet on these highest parts of the mountains; some of the pack-horses slipped and rolled over and over, and yet were taken up alive. Those that did not fall were sadly bruised and lamed in their feet and joints. Mules are best calculated, as we experienced, for such difficult travelling. They seem to think, and to judge [39] of the path before them, and will sometimes put their fore feet together and slip down without stepping. They are as sagacious in crossing a river, where there is

was discovered, but probably by some of Ashley's parties in 1823. The ascent is so gradual that, although 7,500 feet above sea-level, its elevation is not perceived, and in 1843 Frémont could with difficulty tell just where he crossed the highest point of the divide.—ED.

a current. They will not attempt to go straight over, but will breast the tide by passing obliquely upwards. One of our horses was killed by a fall down one of these precipices, and it was surprising that more of them did not share the like fate. Buffaloes were so scarce here, that we were obliged to feed on our dried meat, and this scarcity continued till after we had gained the head sources of the Columbia river. For the last five days we have had to travel on the Colorado of the West, which is a very long river, and empties into the gulph of California.<sup>38</sup>

On the 4th of July, 1832, we arrived at Lewis's fork, one of the largest rivers in these rocky mountains.<sup>39</sup> It took us all day to cross it. It is half a mile wide, deep, and rapid. The way we managed was this: one man unloaded his horse, and swam across with him, leading two loaded ones, and unloading the two, brought them back, for two more, and as Sublet's company and our own made over a hundred and fifty, we were all day in passing the river. In returning, my mule, by treading on a round stone, stumbled and threw me off, and the current was so strong, that a bush which I caught hold of only saved me from drowning.

This being Independence-Day, we drank the health of our friends in Massachusetts, in good clear water, as

---

<sup>38</sup> The upper waters of the Colorado River are now usually termed Green River, from the "Rio Verde" of the Spaniards. This great stream rises on the western slopes of the Wind River Mountains; flowing nearly south, gathering many mountain streams, it next turns abruptly east into the northwest corner of Colorado, and having rounded the Uintah range trends to the south-southwest through Utah, until joined by Grand River, when it becomes the Colorado proper. The first attempt to navigate this formidable waterway was made by Ashley's party in 1825, although Becknell is known to have visited it the previous year. Consult Chittenden's *Fur-Trade*, ii, pp. 509, 778-781, and F. S. Dellenbaugh, *Romance of the Colorado River* (New York, 1902).—ED.

<sup>39</sup> From Green River the caravan crossed the divide between the Colorado and Columbia systems, and came upon a branch of Lewis (or Snake) River, probably Hoback's River. They did not reach the main Lewis until July 6, arriving at the rendezvous on the morning of July 8, after crossing Teton Pass. Consult Wyeth, *Oregon Expeditions*, pp. 158, 159.—ED.

that was the only liquor we had to drink in remembrance of our homes and dear connexions. If I may judge by my own feelings and by the looks of my companions, there was more of melancholy than joy amongst us. We were almost [40] four thousand miles from Boston, and in saying Boston we mean at the same time our native spot Cambridge, as they are separated by a wooden bridge only. From the north fork of Lewis's river we passed on to an eminence called Teton mountain, where we spent the night. The next day was pleasant, and serene. Captain Sublet came in the evening to inquire how many of our company were sick, as they must ride, it being impossible for them to go on foot any farther. His kindness and attention I never can forget. Dr. Jacob Wyeth, the Captain's brother, George More, and Stephen Burdit<sup>40</sup> were too weak to walk. To accommodate them with horses, Captain Wyeth was obliged to dig a hole in the earth, and therein bury the goods which had been hitherto carried on horseback. In the language of the Trappers this hiding of goods was called *cacher* or hidden treasure, being the French term for 'to hide.' When they dig these hiding-holes they carefully carry the earth on a buffalo-skin to a distance, so as to leave no marks or traces of the ground being dug up or disturbed: and this was done to secure the *caché* from being stolen by the Indians or the white men. The goods so hidden are wrapt up in buffalo-skins to keep them dry, before the earth is put over them. Nor is this all; they make a fire over the spot, and all this to prevent the Indians from suspecting that treasure is *caché*, or hidden there, while the owner of it takes care to mark the bearing of the spot on some tree, or rock, or some

---

<sup>40</sup> More was killed by Indians; see *post*. Captain Wyeth found his powder flask at Fort Union upon his return in the summer of 1833. Burdett went on to Oregon, where he resided for some years.—ED.

other object that may lead him to recognise the place again. But I have my doubts whether they who hid the goods will ever return that way to dig up their hidden treasure. We did not meddle with it on our return with Captain Sublet.

[41] On the 5th of July we started afresh rather low-spirited. We looked with sadness on the way before us. The mountain was here pretty thickly timbered down its slopes, and wherever the ground is level. The pines and hemlock trees were generally about eighteen inches through. It had snowed, and we were now at a height where the snow commonly lies all the year round. Which ever way we looked, the region presented a dreary aspect. No one could wonder that even some of us who were in health, were, at times, somewhat homesick. If this was the case with us, what must have been the feelings of our three sick fellow travellers. We passed through a snow bank three feet deep. We well ones passed on with Captain Sublet to the top of the mountain, and there waited until our sick men came up with us. George More fell from his horse through weakness. He might have maintained his seat on level ground, but ascending and descending required more exertion than he could call forth; and this was the case also with Dr. Wyeth. Burdit made out a little better. When we encamped at night, we endured a snow storm. Sublet's company encamped about two miles from us; for at best we could hardly keep up with his veteran company. They were old and experienced trappers, and we, compared with them, young and inexperienced soldiers, little imagining that we should ever have to encounter such hardships, in realizing our dreams of making a fortune. Ignorance of the future is not always to be considered among the calamities of man.

Captain Sublet's grand rendezvous, or Head Quarters,

was about twelve miles from our encampment.<sup>41</sup> He had there about two hundred [42] trappers, or beaver-hunters; or more properly speaking, *skinnners* of entrapped animals; or *peltry*-hunters, for they chased but few of the captured beasts. To these were added about five hundred Indians, of the rank of warriors, all engaged in the same pursuit and traffic of the fur-trade. They were principally the *Flat-heads*,<sup>42</sup> so called from their flattening the heads of their young children, by forcing them to wear a piece of wood, like a bit of board, so as to cause the skull to grow flat, which they consider a mark of beauty even among the females. They are otherwise dandies and belles in their dress and ornaments. This large body of horse made a fine appearance, especially their long hair; for, as there was a pleasant breeze of wind, their hair blew out straight all in one direction, which had the appearance of so many black streamers. When we met they halted and fired three rounds by way of salute, which we returned; and then followed such friendly greetings as were natural and proper between such high contracting powers and great and good allies. This parade was doubtless made by Sublet for the sake of effect. It was showing us, Yankee barbarians, *their Elephants*;—like General and Lord Howe's military display to our commissioners of Congress on Staten Island, when the British Brothers proposed that

---

<sup>41</sup> Pierre's Hole, known more recently as Teton Basin, is a grassy valley trending northwest and southeast, thirty miles long, and from five to fifteen wide, in eastern Idaho, just across the Wyoming border. Pierre (or Teton) River flows through it gathering affluents on the way. The valley was a well-known rendezvous, taking its name from Pierre, an Iroquois employé of the Hudson's Bay Company, who was here murdered by the Blackfeet. The Astorian overland expedition passed through this valley both going and returning (1811, 1812). The most notable event in its history was the battle which Wyeth recounts. It was not on the regular Oregon trail; see Townsend's *Narrative*, *post.*—ED.

<sup>42</sup> For the Flatheads, see Franchère's *Narrative*, in our volume vi, p. 340, note 145.—ED.

celebrated interview; and when Dr. Franklin, Mr. Adams, and some others of the deputation, whose names I do not now recollect, assumed all that careless indifference, very common with the Indians on meeting a white embassy; for the express purpose of conveying an idea, that we, though the weakest in discipline and numbers, are not awe-struck by your fine dress, glittering arms, and full-fed persons.

[43] It was now the 6th of July,<sup>43</sup> 1832, being sixty-four days since we left the settlements of the white people. Captain Sublet encamped his forces; and then pointed out to Captain Wyeth the ground which he thought would be most proper for us; and altogether we looked like a little army. Not but what we felt small compared with our great and powerful allies.

We were overjoyed to think that we had got to a resting-place, where we could repose our weary limbs, and recruit the lost strength of our sick. While Sublet was finishing his business with his Indian trappers, they delivering their peltry, and he remunerating them in his way with cloth, powder, ball, beads, knives, handkerchiefs, and all that gawdy trumpery which Indians admire, together with coffee, rice, and corn, also leather, and other articles,—we, being idle, had time to think, to reflect, and to be uneasy. We had been dissatisfied for some time, but we had not leisure to communicate it and systematize our grievances. I, with others, had spoken with Captain Sublet, and him we found conversable and communicative. Myself and some others requested Captain Wyeth to call a meeting of his followers, to ask information, and to know what we were now to expect, seeing we had passed over

---

<sup>43</sup> According to Nathaniel Wyeth's journal, it was July 8 before his party arrived in Pierre's Hole. They found that Drips, the American Fur Company agent, had, with many independent trappers, reached there before them.—ED.

as we supposed the greatest difficulties, and were now nearly four thousand miles from the *Atlantic*, and within four hundred miles of the *Pacific Ocean*, the end and aim of our laborious expedition, the field where we expected to reap our promised harvest. We wished to have what we had been used to at home,— a town meeting,— or a parish meeting, where every freeman has an equal right to speak his sentiments, and to vote thereon. [44] But Captain Wyeth was by no means inclined to this democratical procedure. The most he seemed inclined to, was a *caucus* with a select few; of whom neither his own brother, though older than himself, nor myself, was to be of the number. After considerable altercation, he concluded to call a meeting of the whole, on business interesting and applicable to all. We accordingly met, Captain Wyeth in the chair, or on the stump, I forget which. Instead of every man speaking his own mind, or asking such questions as related to matters that lay heaviest on his mind, the Captain commenced the business by ordering the roll to be called; and as the names were called, the clerk asked the person if he would go on. The first name was Nathaniel J. Wyeth, whom we had dubbed *Captain*, who answered — “I shall go on.”— The next was William Nud, who, before he answered, wished to know what the Captain’s plan and intentions were, whether to try to commence a small colony, or to trap and trade for beaver? To which Captain Wyeth replied, that *that* was none of our business. Then Mr. Nud said, “I shall not go on;” and as the names of the rest were called, there appeared *seven* persons out of the *twenty-one*, who were determined to return home. Of the number so determined was, besides myself, Dr. Jacob Wyeth, the Captain’s brother, whose strength had never been equal to such a journey. His constitution forbade it. He was brought up at College. Here were discontents on both sides;

criminations and recriminations. A commander of a band of associated adventurers has a very hard task. The commanded, whether in a school, or in a regiment, or company, naturally combine in feeling against [45] their leader; and this is so natural that armies are obliged to make very strict rules, and to pursue rigid discipline. It is so also on ship-board. Our merchant ships cannot sail in safety without exacting prompt obedience; and disobedience in the common seamen is mutiny, and mutiny is a high crime, and approximates to piracy. It is pretty much so in these long and distant exploring expeditions. The Captain cannot always with safety satisfy all the questions put to him by those under his command; and it would lead to great inconvenience to entrust any, even a brother, with any information concealed from the rest. There must be secrecy, and there must be confidence. We had travelled through a dreary wilderness, an infinitely worse country than Palestine; yet Moses himself could not have kept together the Israelites without the aid of miracles; and the history we have given of our boat-like arks, and the wreck of our raft, and the loss of our heaviest articles may lead most readers to suspect that our Leader to his Land of Promise was not an inspired man. In saying this, we censure no one, we only lament our common frailty. Reflect a moment, considerate reader! on our humble means, for an expedition of FOUR THOUSAND *miles*, compared with the ample means, rich and complete out-fit, letters of credit, and every thing deemed needful, given to *Captains Lewis and Clarke*, under the orders of the government of the United States; and yet they several times came very near starving for the want of food, and of *fuel*, even in the *Oregon* territory! In all books of voyages and travels, who ever heard of the utmost distress for want of wood, leaves, roots, coal, or turf to cook [46] with? Yet

all through the dreary wilderness of Missouri, we were obliged to use the dung of buffaloes, or eat raw flesh. The reader will scarcely believe that this was the case even at mouth of the Oregon river. Clarke and Lewis had to buy wood of the Indians, who had hardly enough for themselves. To be deprived of solid food soon ends in death; but we were often deprived of the two elements out of four, *fire* and *water*, and when on the Rocky mountains, of a *third*, I mean *earth*; for everything beneath our feet and around us was stone. We had, be sure, *air* enough, and too much too, sometimes enough almost to blow our hair off.

But to return to our dismal list of grievances. Almost every one of the company wished to go no farther; but they found themselves too feeble and exhausted to think of encountering the risk of a march on foot of three thousand five hundred miles through such a country as we came. We asked Captain Wyeth to let us have our muskets and a sufficiency of ammunition, which request he refused. Afterwards, he collected all the guns, and after selecting such as he and his companions preferred, he gave us the refuse; many of which were unfit for use. There were two tents belonging to the company, of which he gave us one; which we pitched about a quarter of a mile from his. George More expressed his determination of returning home, and asked for a horse, which after considerable difficulty he obtained. This was July 10th. The Captain likewise supplied his brother with a horse and a hundred dollars.

On the 12th of July, Captain Wyeth, after moving his tent half a mile farther from ours, put himself under the command of Mr. Milton Sublet,<sup>44</sup> [47] brother of Captain

---

<sup>44</sup> Milton G. Sublette was a younger brother of William L. — for whom, see our volume xix, p. 221, note 55 (Gregg). He was a partner in the Rocky Moun-

William Sublet so often mentioned. This Captain Milton Sublet had about twenty men under his command, all trappers; so that hereafter as far as I know, it was Wyeth, Sublet and Co.; so that the reader will understand, that Dr. Jacob Wyeth, Palmer, Law, Batch, and myself concluded to retrace our steps to St. Louis in company with Captain William Sublet, while Captain Nathaniel J. Wyeth remained with Milton Sublet, and his twenty men. I have been unreasonably blamed for leaving my kinsman beyond the Rocky Mountains with only eleven of his company, and that too when we were within about four hundred miles of the mouth of the Columbia, *alias* Oregon river, where it pours into the *boisterous* Pacific Ocean, for such Lewis and Clarke found it to their cost.

The spot where we now were, is a valley, between two mountains, about ten miles wide, so lofty that their tops are covered with snow, while it was warm and pleasant where we pitched our tent. This agreeable valley is called by the trappers *Pierre's-Hole*, as if it were a dismal residence; and was the most western point that I visited, being about, we conjectured, four hundred miles short of the mouth of the Oregon river, whence the territory derives its name, which Mr. Hall J. Kelly has described as another paradise! O! the magic of sounds and inflated words! Whether Captain Wyeth's expedition was wise or imprudent we are not prepared to say; but under existing circumstances, half of his company having left him, and among them his own brother, the surgeon of the expedition, we cannot see what better he could have done than to ally himself to an experienced band of hunters, as a step necessary [48] to

---

tain Fur Company, and an able trader; but disease in one of his legs obliged him to abandon the expedition of 1834. See Townsend's *Narrative, post*. The ailing leg was twice amputated, but to no avail, and he died at Fort Laramie, December 19, 1836.—ED.

his own preservation. He was three thousand and five hundred miles from the Atlantic Ocean, with only eleven men, and half his goods lost or expended, and no resource of supply short of St. Louis, nineteen hundred miles from them. Had not the Sublets been with them from that place through the wilderness of Missouri and La Platte, it is hardly probable they would have ever reached the west side of the Rocky Mountains. In passing judgment on this strange expedition, we must take in, beside facts, probabilities and casualties.

On the 17th of July, Captain Wyeth and Captain Milton Sublet set out westward with their respective men to go to Salmon river to winter.<sup>45</sup> The former had eleven beside himself: that river they computed at two hundred miles distance. Wyeth accordingly purchased twenty-five horses from the Indians, who had a great number, and those very fine, and high-spirited. Indeed the Western region seems the native and congenial country for horses. They were, however, delayed till the next day. But when they were about moving, they perceived a drove of something, whether buffaloes or men they could not determine with the naked eye; but when aided by the glass, they recognized them for a body of the *Black-foot* tribe of Indians, a powerful and warlike nation. As this movement was evidently hos-

---

<sup>45</sup> The Salmon is entirely an Idaho River — one of the largest and most important affluents of the Lewis (or Snake). Its sources are in the central part of the state, nearly one hundred and fifty miles west of Wyeth's present position. It flows north, then directly west, and again makes a long northward sweep before losing itself in Lewis River. It is a mountainous stream, not navigable for any great distance. Lewis and Clark (1805) first saw Columbian waters upon the Lemhi — an eastern affluent of the Salmon. Later, Captain Clark made a reconnaissance some fifty miles down the Salmon, hoping to find the way thence to the Columbia; but he was turned back by the rocky cañons and rapids, and the expedition thenceforth took its way by land across the mountains. On the return journey (1806) a party of Lewis and Clark's men advanced to the lower Salmon in search of provisions. The river has since been of note in fur-trading and trapping annals.— ED.

tile, Captain Milton Sublet dispatched two men to call on his brother, who was about eight miles off, for assistance; when Captain William Sublet ordered every man to get ready immediately. We had about five hundred friendly Indian warriors with us, who expressed their willingness to join in our defence.

[49] As soon as we left Captain Wyeth we joined Captain Sublet, as he said that no white man should be there unless he was to be under his command; and his reason for it was that in case they had to fight the Indians, no one should flinch or sneak out of the battle. It seems that when the Black-foot Indians saw us moving in battle array, they appeared to hesitate; and at length they displayed a white flag as an ensign of peace; but Sublet knew their treacherous character. The chief of the friendly Flat-heads and Antoine <sup>46</sup> rode together, and concerted this savage arrangement; to ride up and accost them in a friendly manner; and when the Black-foot chief should take hold of the Flat-head chief's hand in token of friendship, then the other was to shoot him, which was instantly done! and at that moment the Flat-head chief pulled off the Black-foot's scarlet robe, and returned with the Captain to our party unhurt. As soon as the Black-foot Indians recovered from their surprise, they displayed a *red* flag, and the battle began. This was *Joab* with a vengeance,—*Art thou in health, my brother?*

The Black-foot chief was a man of consequence in his nation. He not only wore on this occasion a robe of scarlet cloth, probably obtained from a Christian source, but was decorated with beads valued there at sixty dollars.

---

<sup>46</sup> Antoine Godin was a half-breed whose father, of Iroquois origin, had been killed by Blackfeet upon a creek bearing his name. Antoine went out with Wyeth's company, that built Fort Hall in 1834; while in camp there, he was enticed across the river, and treacherously shot (see Townsend's *Narrative, post*).—ED.

The battle commenced on the Prairie. As soon as the firing began on both sides, the squaws belonging to the Black-foot forces, retreated about fifty yards into a small thicket of wood, and there threw up a ridge of earth by way of entrenchment, having first piled up a number of logs cob-fashion, to which the men at length fell back, and from [50] which they fired upon us, while some of their party with the women were occupied in deepening the trench. Shallow as it was, it afforded a considerable security to an Indian, who will often shoot a man from behind a tree near to its root, while the white man is looking to see his head pop out at man's height. This has taught the United States troops, to load their muskets while lying on their backs, and firing in an almost supine posture. When the Duke of Saxe-Weimer was in Cambridge,<sup>47</sup> he noticed this, to him, novel mode of firing, which he had never before seen; and this was in a volunteer company of militia.— I do not mean to say that the Indians fired only in a supine posture; when they had loaded they most commonly rose up and fired, and then down on the ground again to re-load.— In this action with the formidable Black-foot tribe, Captain Nathaniel J. Wyeth's party had no concern. He himself was in it a very short time, but retired from the contest doubtless for good reasons. After contesting the matter with the warlike tribe about six hours, Captain Sublet found it of little avail to fight them in this way. He therefore determined to charge them at once, which was accordingly done. He led, and ordered his men to follow him, and this proved effectual. Six beside himself first met the savages hand to hand; of these seven, four were wounded, and one killed. The Captain was wounded in his arm and shoulder—

---

<sup>47</sup> Carl Bernhard, duke of Saxe-Weimar-Eisenach (1792-1862), visited America, and published *Travels in North America in the years 1825 and 1826* (Philadelphia, 1828).— ED.

blade. The Indians did not, however, retreat entirely, so that we kept up a random fire until dark; the ball and the arrows were striking the trees after we could see the effects of one and of the other. There was something terrific to our men in their arrows. The idea of a barbed arrow sticking [51] in a man's body, as we had observed it in the deer and other animals, was appalling to us all, and it is no wonder that some of our men recoiled at it. They regarded a leaden bullet much less. We may judge from this the terror of the savages on being met the first time by fire arms,—a sort of thunder and lightning followed by death without seeing the fatal shot.

In this battle with the Indians, not one of those who had belonged to Captain Wyeth's company received any injury. There were, however, seven white men of Sublet's company killed, and thirteen wounded. Twenty-five of our Indians were killed and thirty-five wounded. The next morning a number of us went back to the Indian fort, so called, where we found one dead man and two women, and also twenty-five dead horses, a proof that the Black-foot were brave men.<sup>48</sup> The number of them was uncertain. We calculated that they amounted to about three hundred. We guessed that the reason the three dead bodies were left at the entrenchment was, that they had not enough left to carry off their dead and wounded. This affair delayed Captain Wyeth three days, and Captain Sublet ten days. The names of those who left Captain Wyeth to return home, were Dr. Jacob Wyeth, John B. Wyeth, his cousin, William Nud, Theophilus Beach, R. L. Wakefield, Hamilton Law, George More, — Lane, and Walter Palmer.<sup>49</sup>

<sup>48</sup> According to Irving (*Rocky Mountains*, i, p. 85), who had conversed with several of the participants, the Blackfeet left ten dead in the fort, and reported their loss as twenty-six. Irving also makes the number of dead and wounded whites and allied Indians smaller than Wyeth's estimate.—ED.

<sup>49</sup> Of this company William Nudd and George More were afterwards killed in the mountains; the others reached the settlements.—ED.

The names of those who remained attached to Captain Wyeth, and who went on with him to Salmon river, are J. Woodman, Smith, G. Sargent, — Abbot, W. Breck, S. Burditt, — Ball, St. Clair, C. Tibbits, G. Trumbull, and — Whittier.<sup>50</sup>

When they had gone three days journey from us, [52] as they were riding securely in the middle of the afternoon, about thirty of the Black-foot Indians, who lay in ambush about twenty yards from them, suddenly sprang up and fired. The surprise occasioned the horses to wheel about, which threw off George More, and mortally wounded one of the men, Alfred K. Stevens.<sup>51</sup> As the Indians knew

---

<sup>50</sup> Three of this number — Solomon Howard Smith, John Ball, and Calvin Tibbits — became prominent in Oregon life. Trumbull died at Fort Vancouver during the winter of 1832-33. Wiggin Abbot accompanied Nathaniel Wyeth on his return (1833) and aided in preparing for the latter's second expedition. He was later murdered by the Bannock — see Townsend's *Narrative*, *post*.

Solomon H. Smith, from New Hampshire, was employed as school-teacher at Fort Vancouver, and afterwards settled in the Willamette Valley. Having married Celiast, daughter of a Clatsop chief, he made his home at Clatsop Plains with the missionaries, and there lived until his death. His son, Silas B. Smith, was an attorney at Warrenton, Oregon.

John Ball came from Troy, New York, and remained in Oregon until the autumn of 1833, teaching at Fort Vancouver, and raising grain on the Willamette. After returning to the United States, he contributed an article on the geology and geography of the region, through which he had travelled, to *Silliman's Journal*, xxviii, pp. 1-16. Ball left Troy in 1836, and removed to Grand Rapids, Michigan. See his letter in *Montana Historical Society Collections*, i, (1876), pp. 111, 112.

Calvin Tibbits was a stone-cutter from Maine. He settled at Chemyway and later removed to Clatsop Plains, where he lived with a native wife, and aided missionary enterprise. He made two successful journeys to California for cattle, and later was the judge of Clatsop County.— Ed.

<sup>51</sup> Alfred K. Stephens had participated in the Santa Fé trade, and had in the summer of 1831 led a party of twenty-one men in a free trapping excursion along the Laramie River. Discouraged by ill success, he made an agreement with Fitzpatrick to serve under the Rocky Mountain Fur Company. After this attack in Jackson's Hole, Stephens returned to Pierre's Hole, and rejoined Sublette, only to fall victim to his wound, dying July 30, 1832.

It would appear from John Wyeth's narrative at this point, that he remained with William Sublette at Pierre's Hole, while More and those more eager to set forth had gone on under the leadership of Alfred Stephens.— Ed.

that More could not get away from them, they passed him, and about twenty Indians were coming up the hill where they were. Eight or ten Indians followed up while only five trappers had gained the hill. They were considering how to save George More, when one of them shot him through the head, which was a better fate than if they had taken him alive, as they would have tortured him to death.

We have said that Captain Wyeth and the few who had concluded to go on with him, were ready to begin their march for Salmon river. On this occasion Captain Milton Sublet escorted them about one hundred miles, so as to protect them from the enraged Black-feet, and then left them to take care of themselves for the winter; and this is the last tidings we have had of Captain Nathaniel J. Wyeth, and his reduced band of adventurers.<sup>52</sup> If we have been rightly informed, their chief hope was residing on a pleasant river where there was plenty of salmon, and probably elk and deer, and water-fowl; and we hope fuel, for to our surprise, we learnt that wood for firing was among their great wants. I have since been well-informed that in the valley of Oregon, so much extolled for its fertility and pleasantness, wood to cook with is one among their scarcest and very dear articles of necessity. From all accounts, except those given [53] to the public by Mr. Kelly, there is not a district at the mouth of any large river more unproductive than that of the *Columbia*, and it seems that this is pretty much the case from the tide water of that river to where it empties into the ocean.

The Flat-head Indians are a brave and we had reason to believe a sincere people. We had many instances of their honesty and humanity. They do not lie, steal, nor rob

---

<sup>52</sup> Nathaniel Wyeth crossed to the Columbia, arriving at the Hudson's Bay Company post of Walla Walla, October 14, and at Fort Vancouver later in the same month. Here the remainder of his men left his service.—ED.

any one, unless when driven too near to starvation; and then any man black, white, or red will seize any thing to save himself from an agonizing death. The Flat-heads were well dressed. They wore buck-skin frocks and pantaloons, and moccasins, with seldom any thing on their heads. They draw a piece of fresh buffalo hide on their feet, and at night sleep with their feet not far from the fire, and in the morning find their shoes sitting as snug to their feet as if they had been measured by the first shoe-maker in Boston. It is probable that no people have so little shoe-pinching as these savages. I never heard any one complain of corns, or kibed-heels, severe as the weather is in winter. The women wear moccasins also, but whether made in the same extempore method as those of the men, I know not. I suspect they must experience some shoe-pinching. They wear a petticoat, and a frock of some sort of leather, according to fancy, but all decent and comfortable. In rainy weather, or when very cold, they throw a buffalo-skin over their shoulders, with the fur inside. They have no stationary wigwams; but have a sort of tent, which they fix down or remove with facility. In Major Long's book may be seen an engraved representation of them.<sup>53</sup> Their mode of cooking is by roasting and boiling. They [54] will pick a goose, or a brant, and run a stick through its body and so roast it, without taking out its entrails. They are, according to our notions, very nasty cooks.

I know not what to say of their religion. I saw nothing like images, or any objects of worship whatever, and yet they appeared to keep a sabbath; for there is a day on which they do not hunt nor gamble, but sit moping all day and look like fools. There certainly appeared among them an honor, or conscience, and sense of justice. They

<sup>53</sup> The reference is to James's *Long's Expedition*, reprinted as volumes xiv-xvii of our series. The illustration here referred to is in our volume xvi, p. 107.—ED.

would do what they promised, and return our strayed horses, and lost articles. Now and then, but rarely, we found a pilferer, but not oftener than among the frontier white people. The Indians of all tribes are disposed to give you something to eat. It is a fact that we never found an Indian of any tribe disposed to treat us with that degree of inhospitality that we experienced in crossing the Alleghany Mountains, in the State of Pennsylvania.

The Black-foot tribe are the tallest and stoutest men of any we have seen, nearly or quite six feet in stature, and of a lighter complexion than the rest.

The Indian warriors carry muskets, bows, and arrows, the last in a quiver. The bows are made of walnut, about three feet long, and the string of the sinews of the buffalo, all calculated for great elasticity, and will reach an object at a surprising distance. It was to us a much more terrific weapon of war than a musket. We had one man wounded in the thigh by an arrow; he was obliged to ford a river in his hasty retreat, and probably took a chill, which occasioned a mortification, of [55] which he died. The arrows are headed with flint as sharp as broken glass; the other end of the arrow is furnished with an eagle's feather to steady its flight. Some of these aboriginals, as we learn from Lewis, Clarke, and Major Long, especially the last, have shields or targets; some so long as to reach from the head to the ankle. Now the question is how came our North American Indians with bows and arrows? It is not likely that they invented them, seeing they so exactly resemble the bows and arrows of the old world, the Greeks and Romans. They are the same weapon to a feather. This is a fresh proof that our savage tribes of this continent emigrated from the old one; and I have learned from a friend to whom I am indebted for several ideas, which no one could suppose to have originated with myself, that

the Indian's bow goes a great way to settle a disputed point respecting what part of the old world the ancestors of our Indians came from,—whether Asia or Europe. Now the Asiatic bow and our Indian bow are of a different form. The first has a straight piece in the middle, like the cross-bow, being such an one as is commonly depicted in the hands of Cupid; whereas our Indian bow is a section of a circle, while the Persian or Asiatic bow has two wings extending from a straight piece in the middle. Hence we have reason to conclude that the first comers from the old world to the new, came not from those regions renowned for their cultivation of the arts and sciences. The idea that our North American Indians came over from Scythia, that is, the northern part, so called, of Europe and Asia, whether it is correct to call them Scythians, Tartars, or Russians, I leave others to determine. We [56] have many evidences that our Northern Indians have a striking resemblance in countenance, color, and person to the most northern tribes of Tartars, who inhabit Siberia, or Asiatic Russia. The Black-foot Indians who inhabit small rivers that empty into the Missouri, resemble in mode of living, manners, and character, the Calmuc Tartars. Both fight on horseback, both are very brave, and both inured to what we should consider a very hard life as it regards food. Both avoid as much as they can stationary dwellings, and use tents made with skins.

On this subject we ought not to omit mentioning that the Indians on all sides of the Rocky mountains have several customs both among men and the *women*, which might lead some to conclude that our Northern and Western Indians descended from the Israelites; and this similarity is certainly very remarkable; yet there is one very strong fact against that hypothesis, namely, there is not the least trace amongst our Indians of the *eight-day rite* of the Jewish

males, which sore, and, to us, strange ceremony would hardly have been forgotten, had it been practiced by our Indians. If our idea be well-founded on this subject, the custom could have originated only in warm and redundant climates, so that had Moses marched first from the shores of the Baltic, as did the Goths, instead of the shores of the Red sea, the Jews never would have been subjected to the operation of circumcision.

After all, it is very likely that the Persians came from a different stock from that which peopled the Western and Northern parts of America,—I mean from the warmer regions of Asia. They seem possessed of more delicate marks of person and of mind [57] than the fighting savages of the North. There appears to be a strong line of separation between them, as far as our information goes.

To return to our own story. After the battle at Pierre's Valley, I had an opportunity of seeing a specimen of Indian surgery in treating a wound. An Indian squaw first sucked the wound perfectly dry, so that it appeared white as chalk; and then she bound it up with a piece of dry buck-skin as soft as woollen cloth, and by this treatment the wound began to heal, and soon closed up, and the part became sound again. The sucking of it so effectually may have been from an apprehension of a poisoned arrow. But who taught the savage Indian that a person may take poison into his mouth without any risk, as the poison of a rattle-snake without harm, provided there be no scratch or wound in the mouth, so as to admit it into the blood?

Three of the men that left Captain Wyeth when I did, enlisted with Captain Sublet to follow the trapping business for the period of one year, namely, Wakefield, Nud, and Lane, leaving Dr. Jacob Wyeth, H. Law, T. Beach, W. Palmer, and myself. We accordingly set out on the twenty-eighth day of July, 1832, with Captain William

Sublet, for home; and thus ended all my fine prospects and flattering expectations of acquiring fortune, independence, and ease, and all my hopes that the time had now come in the order of Providence, when that uncultivated tract, denominated the *Oregon Territory*, was to be changed into a fruitful field, and the haunt of savages and wild beasts made the happy abode of refined and dignified man.— Mr. Hall J. Kelly published about two [58] years since a most inflated and extravagant account of that western tract which extends from the Rocky Mountains to the shore of the Pacific Ocean.<sup>54</sup> He says of it that no portion of the globe presents a more fruitful soil, or a milder climate, or equal facilities for carrying into effect the great purposes of a free and enlightened nation; — that a country so full of those natural means which best contribute to the comforts and conveniences of life, is worthy the occupancy of a people disposed to support a free representative government, and to establish civil, scientific, and religious institutions,— and all this and much more to the same effect after Lewis and Clarke's history of their expedition had been published, and very generally read;<sup>55</sup> yet this extravagant and fallacious account of the Oregon was read and believed by some people not destitute of a general information of things, nor unused to reading; but there were circles of people, chiefly among young farmers and journeymen mechanics, who were so thoroughly imbued with these extravagant notions of making a fortune by only going over land to the other side of the globe, to the Pacific Ocean, that a person

<sup>54</sup> Referring to Kelley's *Geographical Sketch of that part of North America called Oregon* (Boston, 1830). Subsequent information has justified most of Kelley's statements, here derided by Wyeth.— ED.

<sup>55</sup> What is known as the Biddle version of the Lewis and Clark journals was issued at Philadelphia in 1814. For the history of this version consult Thwaites, *Original Journals of the Lewis and Clark Expedition* (New York, 1904-05), i, introduction.— ED.

who expressed a doubt of it was in danger of being either affronted, or, at least, accused of being moved by envious feelings. After a score of people had been enlisted in this Oregon expedition, they met together to feed and to magnify each other's hopes and visionary notions, which were wrought up to a high degree of extravagance, so that it was hardly safe to advise or give an opinion adverse to the scheme. When young people are so affected, it is in vain to reason with them; and when such sanguine persons are determined to fight, or to marry, it is dangerous to [59] attempt to part them; and when they have their own way and get their belly full of fight, and of matrimony, there comes a time of cool reflection. The first stage of our reflection began at St. Louis, when we parted with our amphibious wagons, in which we all more or less took a pride. Every one there praised the ingenuity of the contrivance and construction of them for roads and rivers such as at Cambridge, and other places near to Boston; but we were assured at St. Louis, that they were by no means calculated for our far distant journey. We were reminded that Lewis and Clarke carried canoes almost to the foot of the Rocky Mountains, by the route of Missouri river, but were obliged to leave them there, and ascend mountains so very steep, that sometimes their loaded horses slipped and rolled over and over, down into lower ground sixty or seventy feet. This may serve to show, among other things, how ill-informed Captain Wyeth and his company were of the true condition of the country through which they had to pass. We expected to support ourselves with game by our firearms, and therefore powder and shot were the articles we took the most care to be provided with. Nor were we followers undeceived before we were informed at St. Louis, that it would be necessary to take oxen and sheep to be slaughtered on the route for our support. We also found

it advisable to sell at that place the large number of axes, great and small, with which we had encumbered our wagons. All these occurrences, following close after one another, operated to damp our ardor; and it was this probably that operated so powerfully on W. Bell, Livermore, and Griswold, that they *cut* [60] and ran away before we entered upon the difficulties and hardships of our expedition.

Nothing of importance occurred for the first ten days after we left Pierre's Valley. Our huntsmen were abroad in pursuit of buffaloes, when they were alarmed at the sight of a large body of the Black-foot tribe who had been watching our movements. Captain Sublet was not a little alarmed, for he had with him his whole stock of furs, very large in quantity and valuable in quality, which we were told would be worth eighty thousand dollars in St. Louis. But all the world exaggerates; nor even were we of the Oregon expedition entirely free from it, although not to be compared with Hall Jackson Kelly, who never stops short of superlatives, if we may judge by his publications. But he says, by way of apology, that it is needful that the friends of the contemplated Oregon colony should possess a little of the active and vital principle of enthusiasm, that shields against disappointments, and against the presumptuous opinions and insults of others. Now the fact is, the sanguine and enthusiastic Mr. Kelly was never in that country, nor nearer to it than Boston; and his zeal in the colonization of that dreary territory led him to believe what he wished, and to disbelieve every thing adverse to his favorite enterprise. He had a right to enjoy his opinion; but when he took unwearied pains to make ignorant people believe as he did, he was the remote cause of much misery and lasting regret in more than half the adventurers from Cambridge. If the blind lead the blind, we know what will be the consequence. But our business is not to censure

from a disposition to find fault, [61] but to warn others from falling into the errors and difficulties which attended me and my companions, and chiefly through the misinformation of persons who never saw the country.

Each man, when he left St. Louis, was allowed to carry but ten pounds' weight of his own private baggage, and not every one to encumber his march with whatever he chose; and we adhered to that order on our return. We were ten days in passing over the Rocky Mountains in going, and nine in returning; and I repeat it as my fixed opinion, that we never should have reached the western foot of the mountains had we not been under the guard and guidance of Captain Sublet, and his experienced company. He was acquainted with the best way, and the best mode of travelling. He knew the Indian chiefs and they knew him, and each confided in the other. An anecdote will illustrate this. There was a hunters' fort or temporary place of defence occupied by about a dozen white beaver-trappers from St. Louis, where were deposited furs, and goods belonging to the troop of trappers, and that to a considerable amount. One day this small garrison was alarmed at the sight of about six hundred warriors approaching on horseback. Upon this they barred their gate, and closed every door and window against the Indians, but with faint hopes of repelling such a powerful host of well-armed savages; for they had no other idea but that they had come for their destruction. But when the Indians saw them shutting themselves up, they displayed the white flag, and made signs to the white men to open their fort, for they came to trade and not to fight. And the little garrison thought it better to trust to Indian honor [62] than risk savage slaughter or captivity; and accordingly they unbarred their doors and let the chiefs in with every expression of cordiality and confidence. After remaining nine days, they departed

in peace. And what ought to be recorded to their honor, the white people did not miss a single article, although axes, and utensils, and many other things were lying about, desirable to Indians. The savages did not consider, as white men too often do,—that “*might is right.*” When I expressed my surprise at it, one of the white trappers replied, “Why, the word of these trading Indians is *as good as the Bible.*”

We were surprised to find the Indians in the vicinity of the mountains, and all round Pierre's Valley, and the Black-foot tribe, and the Shoshonees, or Snake-tribe, so well provided with muskets, powder and ball, woollen cloth, and many other articles, until we were informed that Mr. Mackenzie, an established and wealthy Indian trader, had long supplied them with every article they desired. Had the Captain of our band been acquainted with this fact, and also been informed of the trading connexion between the Indians and the two brothers, William and Milton Sublet, before he started from home, we should have avoided a great deal of trouble, and he escaped a great deal of expense, and for aught I know, suffering; for the last we heard of him, he was to pass the winter at the Salmon river.

From all I could learn, St. Louis was the depot, or headquarters of the commerce with the Indians. Mackenzie, I was informed has a steam-boat called the *Yellow-stone*, by which he keeps up a trade with the natives inhabiting the region watered by [63] the river of that name. The *Yellow-stone* is a noble river, being eight hundred and thirty-seven miles from the point where Captain Clarke reached it to the Missouri, and is so far navigable for batteaux; and eight hundred and fifty feet wide at its confluence with the river just named. By all accounts, the superiority of the *Yellow-stone* river over the Columbia, or Oregon, for a settlement of New-England adventurers, in point of fer-

tility, climate, and pleasantness, is such as to impress one with regret that ever we extended our views beyond it; for the lamentable fact is, that the trade with the Indians all round the Rocky Mountains, and beyond it to the Oregon territory and Columbia river, is actually forestalled, or pre-occupied by wealthy, established, and experienced traders residing at, or near St. Louis, while we are more than twelve hundred miles in their rear, and very far behind them in time. Besides all these considerations, we may add another of great importance; I mean the fact, that Mackenzie's and Sublet's white trappers, or hunters, are a sort of half Indians in their manners and habits, and could assimilate with them, while we are strangers to the savages, and they to us, with all the dislikes natural to both sides. Captain Sublet, who appears to be a worthy character, and of sound judgment, perceived this, and must have seen, at once, that he had nothing to fear from us, and therefore he paid us great attention, conciliated and made use of us, and while he aided us, he benefited his own concern, and all without the least spice of jealousy, well knowing the impossibility, under existing circumstances, that we could supplant him in the affection of the red men of Missouri and Oregon.

[64] The white traders, and the Indians have, if we may so term it, an annual *Fair*, that has been found by experience profitable to both sides.<sup>56</sup> It is true the white trader barter a tawdry bauble of a few cents' value, for a skin worth fifty of it. And so have we in our India shawls, and, a few years since, in Leghorn hats, in which we were taxed

---

<sup>56</sup> This was the well-known mountain rendezvous instituted to take the place of established forts, by General Ashley of the Rocky Mountain Fur Company. Each year a caravan went up from St. Louis, carrying articles for trade, while parties of trappers and their Indian allies gathered at the appointed place. The first of these gatherings was in 1824; the institution flourished only for about a decade. — Ed.

as high as the white merchant taxes the equally silly Indian. Coffee was sold at two dollars a pound, and so was tobacco. Indeed some of us gave that price to Mr. Nathaniel J. Wyeth for the latter article, a luxury more coveted by men in our situation, anxious and fatigued as we were, than whisky or brandy. This was the case under Lewis and Clarke. When deprived of tobacco, they cut up the old handles of tomahawks, which had been used as pipes, and chewed the wood for the sake of its smell and smack. It is not a singular case. It has been experienced among sailors at sea. They have pined more for the lulling effects of that nauseous weed than for ardent spirits; and it has been known that men will mutiny sooner when deprived of their tobacco, than when deprived of their usual food and rum. There was no small grumbling on being obliged to buy tobacco out of what we thought common stock, at the rate above mentioned, being, as we thought, all members of a commonwealth.

The following may serve to show the knowledge or instinct of horses.

When marching on our return home in the troop of Captain Sublet, not far from the eastern declivity of the Rocky Mountains, we were met by a large body of Indians on horseback. Sublet generally kept seven videts about two miles ahead [65] of his main body. The horses of this advance guard suddenly refused to go on, and turned round, and appeared alarmed, but the riders knew not the cause of it. Captain Sublet rode up, and said, that he knew by the behaviour of the horses that there was an enemy ahead. He said there was a valley several miles off where he apprehended we might be attacked. He therefore ordered every man to examine his arms, and be ready for action. After riding a few miles we discovered a large moving body of a living something. Some of us thought it was a drove of

buffaloes; but the Captain said no, because they were of different colors, whereas bisons, or buffaloes appear all of one color. After viewing them through his glass, he said they were a body of the Black-foot tribe, who had on their war dresses, with their faces painted, bare heads, and other signs of hostility.

Their appearance was very singular, and, to some of us, terrible. There was a pretty fresh breeze of wind, so as to blow the long manes and tails of their horses out straight. Nor was this all: the wind had the same effect on the long black hair of the warriors, which gave them not only a grotesque but a terrific appearance. Added to all this, they kept up a most horrid yell or war-hoop. They rode up and completely surrounded us; and then all was silent. Captain Sublet rode up to the chief, and expressed his hope that all was peace. The savage replied that there should be peace on their part, on condition that Sublet should give them *twenty-five pounds of tobacco*, which was soon complied with, when the Indian army remounted their horses, and rode off at full speed as they came on: and we [66] pushed off with like speed, lest they should repent their bargain and return upon us to mend it.

Who will say that this gallant body of cavalry were not wiser than the common run of white soldiers, to make peace for a *quid*? and thereby save their horses and their own skins? Out of what book did this corps of savage dragoons learn that discretion was the better part of valor? — We answer, From out of that book of Nature which taught the videts' horses that an enemy was in the wind. The horse is the dumbest of all beasts. He is silent under torture. He never groans but once, and that is his *last*. Did they roar like bulls, or squeal like hogs, they would be useless in an army. That noble animal suffers from man a shameful weight of cruel usage in town and country.

The wild horses are a great curiosity. They traverse the country, and stroll about in droves from a dozen to twenty or thirty; and always appear to have a leader, like a gander to a flock of geese. When our own horses were feeding fettered around our encampments, the wild horses would come down to them, and seem to examine them, as if counting them; and would sometimes come quite up to them if we kept out of sight; but when they discovered us, they would one and all give a jump off and fly like the wind.

There is a method of catching a wild horse, that may appear to many "a traveller's story." It is called *creasing* a horse. The meaning of the term is unknown to me.<sup>57</sup> It consists in shooting a [67] horse in the neck with a single ball so as to graze his neck bone, and not to cut the pith of it. This stuns the horse and he falls to the ground, but he recovers again, and is as well as ever, all but a little soreness in the neck, which soon gets well. But in his short state of stupefaction, the hunter runs up, and twists a noose around the skin of his nose, and then secures him with a thong of buffalo-hide. I do not give it merely as a story related; but I believe it, however improbable it may appear, because I saw it done. I saw an admirable marksman, young Andrew Sublet,<sup>58</sup> fire at a fine horse, and after he fell, treat him in the way I have mentioned; and he brought the horse into camp, and it turned out to be a very fine one. The marvel of the story is, that the dextrous

---

<sup>57</sup> *Creasing* may be derived from *craze*, or the French *ecraser*, or the Teutonic *krossa*, or the English *crush*, to bruise, overwhelm, or subdue without killing. It may be Spanish; for it is said that the modern South Americans practice the same device. It would seem as if it jarred the vertebræ, or bony channel of the neck, without cutting any important vessel or nerve. But let the fact be established before we reason upon it.— WYETH.

<sup>58</sup> Andrew Sublette, younger brother of William and Milton, was born in Kentucky, but early removed to the frontier. After the discovery of gold he emigrated to California, settling finally near Los Angeles, where he died from wounds received in an encounter with grizzly bears.— ED.

marksman shall shoot so precisely as only to graze the vital part; and yet those who know these matters better than I do, say, that they conceive it possible.

After we had made peace with the large body of the Black-foot Indians, for, as we may say, a *quid* of tobacco, nothing occurred worth relating until we arrived at the town of Independence, being the first white settlement in our way homewards. I would, however, here remark, that the warlike body just mentioned, though of the fierce Black-foot tribe, hunted and fought independently of that troop with which we had a battle in the Rocky Mountains; and were most probably ignorant of that affair, in which a chief was treacherously shot by one Antoine, who was half Indian and half French, when bearing a white flag, and with which [68] nefarious deed I believe Captain Sublet had no concern. But of all this I cannot speak with certainty, as I myself was half a mile distant, when the Black-foot chief was shot, and his scarlet robe torn off of him by the mongrel Indian, as a trophy instead of his scalp; for the Indians returned their fire so promptly, and continued fighting so long, even after dark, that there was no time nor opportunity of his securing that evidence of his savage blood and mode of warfare.

When we arrived at the town of Independence, Dr. Jacob Wyeth, Palmer, Styles, and myself bought a canoe, being tired of travelling by land, and impatient to get on, and this was the last of my money except a single six-cent piece. A thick fog prevented our early departure, as it would be dangerous to proceed on account of the snags and sawyers in the river. To pass away the tedious time, I strolled out around the town, and lost my direct way back. At length the fog cleared off, and after my companions had waited for me an hour, they pushed off and left me behind! They, be sure, left word that they would wait for

me at the next town, Boonsville,<sup>59</sup> twenty miles' distance. I hurried, however, as fast I could five miles down the banks of the river; when, finding that I could not overtake them, and being fatigued by running, I gave over the chase in despair. I was sadly perplexed, and vexed, at what I conceived worse than savage usage. In this state of mind, I saw a small skiff, with a pair of oars, when an heroic idea came into my half-crazed brain, and feeling my absolute necessities, I acted like certain ancient and some modern heroes, and jumped into the boat, cast off her painter, and pulled away for dear life down the stream. [69] The owner of the boat discovered me when not much more than a quarter of a mile on my way. He and another man got into a canoe and rowed after me, and gained upon me; on perceiving which, I laid out all my strength, and although two to one, I distanced them, and they soon saw they could not overtake me. When I started it was twelve o'clock, and I got to the next town, Boonsville, the sun half an hour high,—the distance about twenty miles. When my skiff struck the shore my pursuers were about twenty rods behind me. I ran into the first barn of a tavern I could reach. They soon raised the neighbors, and placed a watch around the barn, one side of which opened into a cornfield. In searching for me they more than once trod over me, but the thickness of the hay prevented them from feeling me. I knew the severe effects of their laws, by which those who were too poor to pay the fine were to atone for their poverty by stripes, which were reckoned to be worth a dollar a stripe in that cheap country; and hence I lay snug in the hay

---

<sup>59</sup> Boonville was the successor of Franklin as the metropolis of central Missouri. The site was first settled by the Cole family in 1810, laid out as a town in 1817, and made the seat of Cooper County upon the latter's erection in 1818. Its period of greatest prosperity was before the building of the railroad (1830-40), when it was the shipping point for northern Arkansas and southwest Missouri. It had a population in 1900 of 4,377.—ED.

two nights and one day without any thing to eat. Hunger at length forced me from my hiding-place, when I went into the tavern, where I found Dr. Jacob Wyeth, Walter Palmer, and Styles. I told the landlord I was starving for want of food, and he gave me supper; and then I went back into the barn again, where I slept that night.

The next morning I went into the tavern again, and there I found my pursuers, and they found their prisoner, whom they soon put under the custody of two constables, who ordered me breakfast, which having eaten with a good relish, I watched my opportunity, while they were standing thick [70] around the bar, and crept unobserved out of the back-door into the extensive cornfield, and thence into the barn window out of which they threw manure, and regained my snug hiding-hole, where I remained one day and one night more. I now and then could see the constables and their *posse* prowling about the barn, through a crevice in the boards. In the midst of my fears, I was amused with the solemn, and concernful phizes of the two constables, and one or two others. In the morning very early, I ventured out again, and ran down to the river; and there spying a boat, and feeling heroic, I jumped into her and pushed across the river, and landed on the opposite bank, so as to elude the pursuit of the authorities, who I knew would be after me on the right bank of the river, while I marched on the left. When I came to the ferry near St. Louis, I had only a six-cent piece, which the ferryman took for his full fare which was twelve cents, and so I got safe to St. Louis, but with scarcely clothing enough for decency, not to mention comfort: and yet I kept up a good heart, and never once despaired. My companions arrived a day before me; they on Thursday, I on Friday, at four o'clock in the afternoon; they in the steam-boat, like gentlemen, while I, the youngest in the whole Oregon company, like

a runaway. But I do not regret the difference, seeing I have a story worth telling, and worth hearing.

Where to get a lodging that night I did not know, nor where to obtain a morsel of bread. I went up to a large tavern, and asked permission of the keeper to lodge in his barn that night, but he sternly refused. I then went to the other tavern, and made the like request, when the landlord [71] granted it, saying that he never refused a man sleeping in his barn who was too poor to pay for a lodging in his house. I wish I knew his name. I turned in and had a very good night's rest. Should any one enquire how I came to leave my old companions, and they me, I need only say that I had a very serious quarrel with one of them, even to blows; and with that one too who ought to have been the last to treat me with neglect; "and further the deponent saith not."

The next morning I went round in search of work, but no one seemed disposed to hire me; nor do I much wonder at it; for in truth I was so ragged and dirty, that I had nothing to recommend me; and I suffered more depression of spirits during the following six days of my sojourn at St. Louis, than in any part of my route. The steam-boats refused me and Dr. Wyeth started off for New Orleans before I could see him. Palmer let himself by the month on board a steam-boat running between St. Louis and Independence, while I was left alone at the former place six days without employ, victuals, or decent clothing. I could not bear to go to people's doors to beg; but I went on board steam-boats and begged for food. I was such a picture of wretchedness that I did not wonder they refused to hire me. My dress was buck-skin moccasins, and pantaloons; the remains of a shirt I put on in the Rocky Mountains, the remnants of a kersey waistcoat which I had worn ever since I left Cambridge, and a hat I had

worn all the time from Boston, but without any coat whatever, or socks, or stockings; and to add to the wretchedness of my appearance, I was very dirty, and I could not help it. My looks drew the attention of a great many spectators. I thought [72] very hard of it then, but I have since reflected, and must say that when people saw a strong young man of eighteen in high health, and yet so miserable in appearance, it was natural in them to conclude that he must be some criminal escaped from justice, or some vagabond suffering under the just effects of his own crimes.

At length, wearied out by my ill fortune, I plucked up courage, and went to the Constitution steam-boat, Captain Tufts, of Charlestown, near Boston, and told him my name and family; and detailed to him my sufferings, and said that he *must* give me a passage, and I would work for it. To my great joy he consented, and he gave me shirt, pantaloons, &c.; and I acted at a *fireman*, or one who feeds the fire with pine wood under the steam-boilers. I forbear narrating the particulars of my sufferings for want of food during the six days I tarried at St. Louis. Suffice it to say, that I was in a condition of starvation, and all owing to my wretched appearance. When I at times went on board the steam-boats, I was glad to scrape up any thing after the sailors and firemen had done eating. At length I obtained employ in the steam-boat Constitution, and a passage to New-Orleans, on the condition of acting as one of the firemen, there being twelve in all, with five men as sailors, and two hundred and forty passengers, party emigrants, but chiefly men belonging to the settlements on the Mississippi, going down to Natchez, and to New-Orleans to work. We tarried one night at the Natchez; but soon after we left it the *cholera* broke out among the passengers, eighty of whom died before we reached New-

Orleans, and two of our own firemen. A most shocking scene followed.

[73] I felt discouraged. My miseries seemed endless. After trying day after day in vain to get a passage in a steam-boat, I was made happy in procuring one, though I paid for it, by working as a fireman, the hardest and most disagreeable occupation on board; still I was contented, as I had victuals enough to eat; and yet, after all, I saw men perishing every minute about me, and thrown into the river like so many dead hogs. It is an unexaggerated fact that I witnessed more misery in the space of eight months than most old men experience in a long life.

On arriving at New-Orleans, Captain Tufts sent off every man of the passengers, leaving those only who belonged to the boat. He gave me shirts and other clothing, and offered me twenty dollars a month, if I would go back to St. Louis with him. I remained on board about a week; and so desirous was I to get home, that I preferred going ashore, although I knew that the yellow fever and black vomit, as well as cholera were committing great havoc in the city. The shops, stores, taverns, and even the *gambling-houses*, were shut up, and people were dying in-doors, and out of doors, much faster than they could be buried. More white people were seized with it than black; but when the latter were attacked, more died than the former. The negroes sunk under the disorder at once. When a negro gets very sick, he loses all his spirits, and refuses all remedies. He wishes to die, and it is no wonder, if he believes that he shall go into a pleasant country where there are no white men or women.

I soon got full employ as a grave-digger, at two dollars a day, and could have got twice that sum had I been informed of the true state of things. In [74] the first three days we dug a separate grave for each person; but we soon

found that we could not clear the hearses and carts. I counted eighty-seven dead bodies uninterred on the ground. Yet where I worked, was only one of the three grave-yards belonging to the city, and the other two were larger. We therefore began on a new plan. There were twenty-five of us grave-diggers. We dug a trench fifty-seven feet long, eight feet wide, and four feet deep, and laid them as compactly as we could, and filled up the vacant spaces with children. It was an awful piece of business. In this large trench we buried about, perhaps, three hundred; and this business we carried on about a month. During this time, you might traverse the streets of New-Orleans, without meeting a single person, except those belonging to the hearses, and carts, loaded with the dead. Men were picked up in the morning who died after dark before they could reach their own houses. If you ask me if they died with yellow fever, or cholera, I must answer that I cannot tell. Some said the one, and some the other. Every thing was confusion. If a negro was sent by his master to a carpenter, for what they called a coffin, which was only a rough board box, he was commonly robbed of it before he got home. I myself saw an assault of this kind, when the poor black slave was knocked down and the rude coffin taken from him. New-Orleans is a dreadful place in the eyes of a New-England man. They keep Sunday as we in Boston keep the 4th of July, or any other day of merriment and frolic. It is also a training day every other Sunday for their military companies.

I was in part witness to a shocking sight at the marine hospital, where had been many patients [75] with the yellow fever. When the doctors, and those who had the care of that establishment had deserted the house, between twenty-five and thirty dead bodies were left in it; and these were so offensive from putrefaction, that when the city

corporation heard of it, they ordered the house, together with the bodies to be burnt up; but this was not strictly complied with. A number of negro slaves were employed to remove the bodies, which being covered with wood and other combustibles, were all consumed together.

At length I was attacked myself with symptoms of the yellow fever,—violent pain in my head, back, and stomach. I lived at that time in the family of a Frenchman, who, among his various occupations, pretended to skill in physic. He fed me on castor oil. I took in one day four wine-glasses of it, which required as much resolution as I was master of: but my doctor assured me that he had repeatedly scared away the yellow fever at the beginning of it, by large and often repeated doses of that medicine. Its operation was not one way, but every way. I thought I should have no insides left to go home with. Yet it is a fact, and I record it with pleasure, that it carried off all my dreadful symptoms, and in a very few days, I had nothing to complain of but weakness, which a good appetite soon cured. I therefore recommend a man in the first stage of yellow fever to take down a gill of castor oil, made as hot as he can swallow it; and repeat the dose in eight hours.

I remained nine weeks in New-Orleans, a city so unlike Boston, in point of neatness, order, and good government, that I do not wonder at its character for unhealthiness. Stagnant water remains in the streets as [76] green as grass, with a steam rising out of it that may be smelt at the distance of half a mile. Besides this, their population is so mixed, that they appear running against each other in the streets, every one having a different object and a different complexion. In one thing they seem to be agreed, and to concur in the same object, namely, *gaming*. In that delirious pursuit, they all speak the same language, and appear to run down the same road to ruin.

I am glad that it is in my power to support what I have said respecting the Marine Hospital, by the following public testimony, published by authority, taken from one of their newspapers.

“NEW-ORLEANS.— The following report from a committee appointed to examine one of the hospitals, will account, in some degree, for the unprecedented mortality which has afflicted New-Orleans. The report is addressed to the mayor.

“The undersigned, standing committee named by the city council during the prevalence of the epidemic now desolating the city, have the honor to report, that, in consequence of information given by sundry respectable persons, relative to the condition of the hospital kept by Dr. M’Farlane, they repaired to-day, at half-past one o’clock, to said hospital; that in all the apartments they found the most disgusting filth; that all the night *vessels* were full, and that the patients have all declared that for a long time they had received no kind of succour; that in many of the apartments of the building they found corpses, several of which had been a number of days in putrefaction; that thence they repaired to a chamber adjoining the kitchen, where they found the body of a negro, which had been a long time dead, in a most offensive state. They finally went to another apartment opposite the kitchen, [77] which was equally filthy with the other rooms, and that they there found many corpses of persons a long time dead; that in a bed, between others, they found a man dying, stretched upon the body of a man many days dead.

“Finally, they declare that it is impossible for one to form an idea of what they have witnessed, without he had himself seen it; that it is indispensably necessary for the patients to evacuate this hospital, and above all, to watch lest the corpses in a state of putrefaction oc-

casation pestilence in that quarter, and perhaps in the whole city.

“*November 7.* The standing committee has the honor to present the following additional report.

“In one of the apartments where were many living and dead bodies, they found under a bed a dead body partly eaten, whose belly and entrails lay upon the floor. It exhaled a most pestiferous odor. In a little closet upon the gallery there were two dead bodies, one of which lay flat upon the floor, and the other had his feet upon the floor and his back upon the bed forming a curve; the belly prodigiously swelled and the thighs green. Under a shed in the yard was the dead body of a negro, off which a fowl was picking worms. The number of corpses amounted to twelve or fourteen.

“Signed,

E. A. CANNON, *Chairman.*

FELIX LABATUT,

*Alderman, Second Ward.*

CHARLES LEE,

*Alderman, First Ward.’*

I took passage in the ship Henry Thomson, Captain Williams, and arrived in Boston, January 2d, 1833, after an absence of ten months, having experienced in that time a variety of hardships.

## [78] CONCLUDING REFLECTIONS

The lesson to be collected from this short history is the great danger in *making haste to be rich*, instead of relying upon patient industry, which never fails to give a man his just deserts. Making haste to become rich is the most fruitful source of the calamities of life; for here cunning, contrivance, and circumvention, take the place of diligence.

After the schemer's plans have all failed, there seems only one tempting means left to obtain riches in a hurry, and that is by gaming, the most prosperous invention ever devised by the arch enemy of mankind; and when that fails, the next downward step to destruction, excepting drunkenness, is robbery, many instances of which we find recorded in the annals of Newgate and the records of the Old Bailey in London. Such atrocities have never, or very rarely, occurred in our own country, and never will so long as we are wisely contented with the fruits of patient industry, and so long as we believe that the diligent hand maketh rich. These reflections refer to extreme cases, and are not applicable, or meant to be personally applicable, to the unfortunate expedition in which we have been concerned. It is not meant to reprehend those enormous vices and crimes which are known in the old countries, but only to correct a spirit of discontent in men well situated and circumstanced. "*If you stand well, stand still,*" says the Italian proverb.

Some may say this doctrine, if put in practice, would check all enterprise. Not entirely so, provided the means and the end were cautiously adjusted. Christopher Columbus ran a great risk; [79] yet he knew, from the reasonings of his capacious mind, that there must be "another and a better world" than that he was born in; and under that strong and irresistible impression he tempted the trackless ocean and found it. But what shall we say of our Oregon adventurers, who set out to pass over the Rocky Mountains, and thence down the Columbia river to the Pacific ocean, in boats upon wheels? and that too with a heavy load of goods, and those chiefly of iron. What renders the project more surprising is, that they should take with them the most ponderous articles of a blacksmith's shop,—anvils, and a large vice. It is more than

probable that the old and long established wholesale Indian traders at St. Louis laughed in their sleeves, when they saw such a cargo fresh from the city of "notions," paraded with all the characteristic confidence of the unwavering Yankee spirit. After assuring them that their ingenious and well-constructed amphibious vehicles would not answer for travelling in such a rough country as they must go through, they purchased all three of them, and advised our leader to buy sheep and oxen to live on between the white settlements and the country of the savages, and not to trust to their guns for food. This turned out very wholesome advice, as they must have starved without that provision.

The party under Captains Lewis and Clarke, sent out by the government of the United States, consisted of nine young men from Kentucky, fourteen soldiers of the United States army who volunteered their services, two French watermen,—an interpreter and hunter,—and a black servant belonging to Captain Clarke. All these, except the last, were enlisted to serve as privates during the expedition, [80] and three sergeants were appointed from amongst them by the captains. In addition to these, were engaged a corporal and six soldiers, and nine watermen, to accompany the expedition as far as the Mandan nation, in order to assist in carrying the stores, or repelling an attack, which was most to be apprehended between Wood river and that tribe. This select party embarked on board three boats. One was a keel-boat fifty-five feet long, drawing three feet of water, with a large square sail, and twenty-two oars, with a fore-castle and cabin, while the middle was covered by lockers, which might be raised so as to form a breast-work. There were beside two *periogues*, or open boats of seven oars each. They had two horses, for any purpose, which they led along the banks; and fourteen

bales of goods, with a variety of clothing, working utensils, locks, flints, ammunition, and richly-laced coats, and other gay dresses, and a variety of ornaments suited to the taste of the Indians, together with knives, flags, tomahawks, and medals.<sup>60</sup> Yet all these articles were exhausted, without any accident or particular loss. The party was led by two experienced military officers, and the men were under military regulations; which was not the case with the Cambridge adventurers, who were upon shares, and all on a level.

We are unwilling that our readers should rely entirely on our opinion of the inadequacy of the outfits for such a formidable undertaking as that of going from the Atlantic shore of New-England to the shore of the Pacific by land. We shall therefore subjoin the opinion of a sensible gentleman, who had spent some time in the Missouri territory, and traversed its dreary prairies, where no tree [81] appears, and where there is, during the greater part of the year, no fuel for cooking, nor water fit to drink. He says: "Do the Oregon emigrants seek a fine country on the Oregon river? They will pass through lands [to get to it] of which they may buy two hundred acres for less than the farther expenses of their journey."<sup>61</sup> He tells us that a gentleman (Mr. Kelly) has been employing his leisure in advising schemes to better the condition of his fellow countrymen, and has issued advertisements, inviting the good people of New-England to leave their homes, their connexions, and the comforts of civilized society, and follow him across the

---

<sup>60</sup> These statements in regard to the Lewis and Clark expedition are taken verbatim from the published edition (Biddle's, 1814) of the journals. For recent light on the personnel of the party, consult O. D. Wheeler, *On the Trail of Lewis and Clark* (New York, 1904).—ED.

<sup>61</sup> See *New-England Magazine* for February and April, 1832, under the signature of W. J. S.—WYETH.

*Comment by Ed.* The *New England Magazine* was published monthly (1831-35) by J. T. and E. Buckingham, Boston.

continent to the shores of the Pacific. He tells those who may reach St. Louis, that they will find there many who have been to Oregon, and found no temptation to remain there; — that they may possibly charter a steamboat from St. Louis to the mouth of the river Platte, but no farther, as that stream is not navigable for steamboats unless during freshets. And after they reach the mouth of the Platte, they will have a *thousand* miles to go before they reach the Rocky Mountains; and the country through which the adventurers must pass is a level plain, where the eye seeks in vain for a tree or a shrub,— that in some places they must travel days and nights without finding wood or water, for that the streams only are scantily fringed with wood. Our Cambridge emigrants actually found this to be the case, as they had no other fuel for cooking their live stock than buffalo-dung. The writer says, (and he had been there), that the ground is covered with [82] herbage for a few weeks in the year only, and that this is owing to the Indians burning the Prairies regularly twice a year, which occasions them to be as bare of vegetation as the deserts of Arabia. The same experienced traveller assures them that they could not take provisions with them sufficient for their wants, and that a dependence on their guns for support was fallacious, and the same uncertainty as to the buffaloes; — that sometimes those animals were plenty enough, and sometimes more than enough, so as to be dangerous. When they trot smartly off, ten thousand and more in a drove, they are as irresistible as a mountain-torrent, and would tread into nothing a larger body than the Cambridge fortune-hunters. Their flesh is coarse beef, and the grisly bear's, coarse pork; but this kind of bear, called the *horrible* from his strength and ferocity, is a most terrific beast, and more disposed and able to feed on the hunter than the huntsman upon him. We can assure the

emigrants, says the writer already quoted, from our own experience, that not one horse in five can perform a journey of a thousand miles, without a constant supply of something better than prairie-grass.

The journal of Lewis and Clarke to the Pacific ocean, over the Rocky Mountains, was a popular book in the hands of every body; and the Expedition of Major Long and company was as much read; and both of these works detail events and facts enough, one would suppose, to deter men from such an arduous enterprise; not to mention the hostile tribes of Indians through which they must pass. It seems strange, but it is true, that a theoretical man need not despair of making the multitude believe any thing but truth. They believed the enthusiastic [83] Mr. Hall J. Kelley, who had never been in the Oregon territory, or seen the Rocky Mountains, or a prairie-dog, or a drove of buffaloes, and who in fact knew nothing of the country beyond some guess-work maps; yet they would not read, consider, or trust to the faithful records of those officers who had been sent by the government to explore the country and make report of it.

There is a passage in the essay written by W. J. S. which we shall insert here on his authority, as it cannot be supposed that we, at this distance, should be so well acquainted with the affairs in Missouri, as one who had resided on the spot. We assume not to keep pace with the professed eulogist of Oregon, of its river, and its territory, its mild climate, its exuberant soil, and its boisterous Pacific, so inviting to the distressed poor in the neighbourhood of Boston; who are exhorted by him to pluck up stakes and courage, and march over the Rocky Mountains to wealth, ease, and independence. The passage we allude to reads thus: — “About twelve years since, it was discovered by a public-spirited citizen of St. Louis, that the supply of furs

was not equal to the demand. To remedy this evil, he raised a corps of sharpshooters, equipped them with guns, ammunition, steel-traps, and horses, and sent them into the wilderness to teach the Indians that their right was only a right of occupancy. They did the savages irreparable injury. They frightened the buffaloes from their usual haunts,—destroyed the fur-clad animals, and did more mischief than we have room to relate.” He adds, sarcastically, that “the Indians were wont to hunt in a slovenly manner, leaving a few animals yearly for breeding. But that the white hunters were more thorough-spirited, [84] and made root-and-branch work of it. When they settled on a district, they destroyed the old and young alike; and when they left it, they left no living thing behind them. The first party proving successful, more were fitted out, and every successive year has seen several armed and mounted bands of hunters, from twenty to a hundred men and more in each, pouring into the Indian hunting grounds; and *all this has been done in open and direct violation of a law of the United States, which expressly forbids trapping and hunting on Indian lands.* The consequence has been that there are now few fur-clad animals this side the mountains.”

Lewis and Clarke, and some other travellers, speak of friendly Indians,—of their kindness and hospitality, and expatiate on their amiable disposition, and relate instances of it. Yet after all, this Indian friendship is very like the affection of the negroes in the Southern States for their masters and mistresses, and for their children,—the offspring merely of fear. There can be no friendship where there is such a disparity of condition. As to their presents, an Indian gift is proverbial. They never give without expecting double in return.

What right have we to fit out armed expeditions, and enter the long occupied country of the natives, to destroy

their game, not for subsistence, but for their skins? They are a contented people, and do not want our aid to make them happier. We prate of civilizing and Christianizing the savages. What have we done for their benefit? We have carried among them *rum*, *powder* and *ball*, small-pox, starvation, and misery. What is the reason that Congress, — the great council of the nation, — the collected wisdom of these United States, has turned a deaf [85] ear to all applications for establishing a colony on the Oregon river? Some of the members of that honorable house of legislation know that the district in question is a boisterous and inclement region, with less to eat, less to warm the traveller, and to cook with, than at the mouth of any other known river in the United States. We deem the mouth of the river St. Lawrence as eligible a spot for a settlement of peltry merchants as the mouth of the Columbia. When Lewis and Clarke were on that river, they had not a single fair day in two months. They were drenched with rain day and night; and what added to their comfortless condition was the incessant high winds, which drove the waves furiously into the Columbia river with the tide; and on its ebb, raised such commotion, and such a chopping sea, that the travellers dared not venture upon it in their boats; yet the Indians did, and managed their canoes with a dexterity which the explorers greatly admired, but could not imitate. The boisterous Pacific was among the new discoveries of our American adventurers. Had their expedition been to the warm climate of Africa, or to South America, they would have been sure of plenty to eat; but in the western region, between the Rocky Mountains and the great river of the West, the case is far otherwise.

It is devoutly to be wished that truth may prevail respecting those distant regions. Indeed the sacred cause of humanity calls loudly on its votaries to disabuse the people

dwelling on these Atlantic shores respecting the Oregon paradise, lest our farmers' sons and young mechanics should, in every sense of the phrase, stray from home, and go they know not whither,—to seek they know not what. [86] Or must Truth wait on the Rocky Mountains until some Indian historian,—some future *Clavigero*<sup>62</sup> shall publish his annals, and separate facts from fiction? We esteem the "*History of the Expedition under the command of Captains Lewis and Clarke to the Sources of the Missouri, thence across the Rocky Mountains, and down to the Pacific Ocean,*" substantially correct. Their conduct towards the Indians was marked throughout with justice and humanity; and the journal of that expedition will be a lasting monument of their judicious perseverance, and of the wisdom of the government of the United States.

Reader! The book you have in your hands is not written for your amusement merely, or to fill up an idle hour, but for your instruction,—particularly to warn young farmers and mechanics not to leave a certainty for an uncertainty, and straggle away over a sixth part of the globe in search of what they leave behind them at home. It is hoped that it may correct that too common opinion that the farther you go from home the surer you are of making your fortune. Agriculture gives to the industrious farmer the riches which he can call his own; while the indefatigable mechanic is sure to acquire a sufficiency, provided he "build not his house too high."

Industry conducted by Prudence is a virtue of so diffusive a nature that it mixes with all our concerns. No business can be managed and accomplished without it. Whatever be a man's calling or way of life, he must, to be happy, be

---

<sup>62</sup> The Abbé Clavigero, a native of Vera Cruz, who resided forty years in the Provinces of New Spain, spoke the language of the natives, and has written the History of Mexico.—WYETH.

actuated by [87] a spirit of industry, and that will keep him from want, from dishonesty, and from the vice of gambling and lottery-dealing, and its long train of miseries.

The first and most common deviation from sober industry is a desire to roam abroad, or in one word, a feeling of *discontent*,— a making haste to be rich, without the patient means of it. These are reflections general and not particular, as it regards all such high hopes and expectations, as lead to our Oregon expedition and to its disappointments. The most that we shall say of it is,— that it was an injudicious scheme arising from want of due information, and the whole conducted by means inadequate to the end in view.

Oh happy — if he knew his happy state,  
The man, who, free from turmoil and debate,  
Receives his wholesome food from Nature's hand,  
The just return of *cultivated* land.

Pennsylvania.

## ADVERTISEMENT

THE Columbia River Fishing and Trading Company was formed in 1834, by several individuals in New York and Boston. Capt. WYETH, having an interest in the enterprise, collected a party of men to cross the continent to the Pacific, with the purpose chiefly of establishing trading posts beyond the Rocky Mountains and on the coast.

The idea of making one of Capt. Wyeth's party was suggested to the author by the eminent botanist, Mr. NUTTALL, who had himself determined to join the expedition across the North American wilderness. Being fond of Natural History, particularly the science of Ornithology, the temptation to visit a country hitherto unexplored by naturalists was irresistible; and the following pages, originally penned for the family-circle, and without the slightest thought of publication, will furnish some account of his travels.

# CONTENTS

## CHAPTER I

Arrival at St. Louis — Preparations for the journey — Sâque Indians — Their appearance, dress, and manners — Squaws — Commencement of a pedestrian tour — Sandhill cranes — Prairie settlers — Their hospitality — Wild pigeons, golden plovers and prairie hens — Mr. P. and his daughters — An abundant repast — Simplicity of the prairie maidens — A deer and turkey hunt — Loutre Lick hotel — A colored charon — Comfortable quarters — Young men of the west — Reflections on leaving home — Loquacity of the inhabitants — Gray squirrels — Boonville — Parroquets — Embarkation in a steamboat — Large catfish — Accident on board the boat — Arrival at Independence — Description of the town — Encampment of the Rocky Mountain company — Character of the men — Preparation for departure — Requisites of a leader — Backwoods familiarity — Milton Sublette and his band — Rev. Jason Lee, the missionary — A letter from home — Mormonites — Military discipline and its consequences, . . . . . 121

## CHAPTER II

Departure of the caravan — A storm on the prairie — Arrangement of the camp — Kansas Indians — Kansas river — Indian lodges — Passage of the river — Buffalo canoes — Kansas chief — Upper Kaw village — their wigwams — Catfish and ravens — Return of Mr. Sublette — Pawnee trace — Desertion of three men — Difficulties occasioned by losing the trail — Intelligence of Mr. Sublette's party — Escape of the band of horses — Visit of three Otto Indians — Anecdote of Richardson, the chief hunter — his appearance and character — White wolves and antelopes — Buffalo bones — Sublette's deserted camps — Lurking wolves, . . . . . 141

## CHAPTER III

Arrival at the Platte river — Wolves and antelopes — Anxiety of the men to see buffalo — Visit of two spies from the Grand Pawnees — Forced march — A herd of buffalo — Elk — Singular conduct of the horses — Killing a buffalo — Indian mode of procuring buffalo — Great herd — Adventure with an Indian in the tent — Indian feat with bow and arrow — Notice of the Pawnee tribes — Disappearance of the buffalo from the plains of the Platte — A hunting adventure — Killing a buffalo — Butchering of a bull — Shameful destruction of the game — Hunters' mode of quenching thirst, . . . 157

## CHAPTER IV

Change in the face of the country — Unpleasant visitation — N. fork of the Platte — A day's journey over the hills — Poor pasture — Marmots — Rattlesnake and gopher — Naturalist's success and sacrifices — A sand storm — Wild horses — Killing of a doe antelope — Bluffs — The Chimney — "Zip Koon," the young antelope — Birds — Feelings and cogitations of a naturalist — Laramie's fork — Departure of two "free trappers" on a summer "hunt" — Black hills — Red butes — Sweet-water river, and Rock Independence — Avocets — Wind river mountains — Rocky Mountain sheep — Adventure with a grizzly bear — Rattlesnakes — Toilsome march, and arrival at Sandy river — Suffering of the horses — Anticipated delights of the rendezvous, . . . 173

## CHAPTER V

Arrival at the Colorado — The author in difficulty — Loss of a journal, and advice to travelling tyros — The rendezvous — Motley groups infesting it — Rum drinking, swearing, and other accomplishments in vogue — Description of the camp — Trout — Abundance of game — Cock of the plains — [vi] Leave the rendezvous — An accession to the band — A renegade Blackfoot chief — Captain Stewart and Mr. Ashworth — Muddy creek — More carousing — Abundance of trout — Bear river — A hard day's march — Volcanic country — White-clay pits and "Beer spring" — Rare birds and com-

mon birds — Mr. Thomas McKay — Captain Bonneville's party — Captains Stewart and Wyeth's visit to the lodge of the "bald chief"— Blackfoot river — Adventure with a grizzly bear — Death of "Zip Koon"— Young grizzly bears and buffalo calves — A Blackfoot Indian — Dangerous experiment of McKay — the three "Tetons"— Large trout — Shoshoné river — Site of "Fort Hall"— Preparations for a buffalo hunt, . . . . . 189

#### CHAPTER VI

Departure of the hunting camp — A false alarm — Blackfeet Indians — Requisites of a mountain-man — Good fare, and good appetites — An experiment — Grizzly bears — Nez Percé Indian — Adventure with a grizzly bear — Hunters' anecdotes — Homeward bound — Arrival at "Fort Hall"— A salute — Emaciation from low diet — Mr. McKay's company — Buffalo lodges — Effects of judicious training — Indian worship — A "Camp Meeting"— Mr. Jason Lee, a favorite — A fatal accident and a burial, . . . . . 212

#### CHAPTER VII

Departure of McKay's party, Captain Stewart, and the missionaries — Debauch at the fort — Departure of the company — Poor provision — Blackfeet hunting ground — Sufferings from thirst — Goddin's creek — Antoine Goddin, the trapper — Scarcity of game — A buffalo — Rugged mountains — More game — Unusual economy — Habits of the white wolf — "Thornburg's pass"— Difficult travelling — The captain in jeopardy among the snow — A countermarch — Deserted Banneck camp — Toilsome and dangerous passage of the mountain — Mallade river — Beaver dams, and beaver — A party of Snake Indians — Another Banneck camp — "Kamas prairie"— Indian mode of preparing the kamas — Racine blanc, or biscuit root — Loss of horses by fatigue — Boisé or Big-wood river — Salmon — Choke-cherries, &c. 230

#### CHAPTER VIII

A substitute for game, and a luxurious breakfast — Expectations of a repast, and a disappointment — Visit of a Snake chief

— his abhorrence of horse meat — A band of Snake Indians — their chief — Trade with Indians for salmon — Mr. Ashworth's adventure — An Indian horse-thief — Visit to the Snake camp — A Banneck camp — Supercilious conduct of the Indians — Snake river — Equipment of a trapping party — Indian mode of catching salmon — Loss of a favorite horse — Powder river — Cut rocks — Grand Ronde — Captain Bonneville — Kayouse and Nez Percé Indians — An Indian beauty — Blue mountains — A feline visit, . . . 250

## CHAPTER IX

Passage of the Blue mountains — Sufferings from thirst — Utalla river — A transformation — A novel meal — Columbia river and Fort Walla-walla — A dinner with the missionaries — Anecdote of Mr. Lee — Brief notice of the Fort — Departure of the missionaries — Notice of the Walla-walla Indians — Departure for Fort Vancouver — Wild ducks — Indian graves — Visits from Indians — Ophthalmia, a prevalent disease — A company of Chinook Indians — The Dalles — The party joined by Captain Wyeth — Embarkation in canoes — A heavy gale — Dangerous navigation — Pusillanimous conduct of an Indian helmsman — A zealous botanist — Departure of Captain Wyeth with five men — Cascades — A portage — Meeting with the missionaries — Loss of a canoe — A toilsome duty — Arrival at Fort Vancouver — Dr. John McLoughlin, the chief factor — Domiciliation of the travellers at Fort Vancouver, . . . 275

## CHAPTER X

Fort Vancouver — Agricultural and other improvements — Vancouver "camp" — Expedition to the Wallamet — The falls — A village of [vii] Klikatat Indians — Manner of flattening the head — A Flathead infant — Brig "May Dacre" — Preparations for a settlement — Success of the naturalists — Chinook Indians — their appearance and costume — Ague and fever — Desertion of the Sandwich Islanders — Embarkation for a trip to the Islands — George, the Indian pilot — Mount Coffin — A visit to the tombs — Superstition — Visit to an Indian house — Fort George — Site of Astoria

— A blind Indian boy — Cruel and unfeeling conduct of the savages — their moral character — Baker's Bay — Cape Disappointment — Dangerous bar at the entrance of the river — The sea beach — Visit of Mr. Ogden — Passage across the bar, . . . . . 297

## CHAPTER XII

. . . Arrival at the Columbia, . . . . . 317

## CHAPTER XIII

Passage up the Columbia — Birds — A trip to the Wallammet — Methodist missionaries — their prospects — Fort William — Band-tail pigeons — Wretched condition of the Indians at the falls — A Kallapooyah village — Indian cemetery — Superstitions — Treatment of diseases — Method of steaming — "Making medicine" — Indian sorcerers — Death of Thornburg — An inquest — Verdict of the jury — Inordinate appetite for ardent spirits — Eight men drowned — Murder of two trappers by the Banneck Indians — Arrival of Captain Thing — His meeting and skirmish with the Blackfeet Indians — Massacre — A narrow escape, . . . . . 318

## CHAPTER XIV

Indians of the Columbia — Departure of Mr. Nuttall and Dr. Gairdner — Arrival of the Rev. Samuel Parker — his object — Departure of the American brig — Swans — Indian mode of taking them — A large wolf — A night adventure — A discovery, and restoration of stolen property — Fraternal tenderness of an Indian — Indian vengeance — Death of Waskéma, the Indian girl — "Busy-body," the little chief — A village of Kowalitsk Indians — Ceremony of "making medicine" — Exposure of an impostor — Success of legitimate medicines — Departure from Fort Vancouver for a visit to the interior — Arrival of a stranger — "Cape Horn" — Tilki, the Indian chief — Indian villages [viii] — Arrival at Fort Walla-walla — Sharp-tailed grouse — Commencement of a journey to the Blue mountains, . . . . . 332

## CHAPTER XV

A village of Kayouse Indians — Appearance and dresses of the women — family worship — Visit to the Blue mountains — Dusky grouse — Return to Walla-walla — Arrival of Mr. McLeod, and the missionaries — Letters from home — Death of Antoine Goddin — A renegado white man — Assault by the Walla-walla Indians — Passage down the Columbia — Rapids — A dog for supper — Prairies on fire — Fishing Indians — Their romantic appearance — Salmon huts — The shoots — Dangerous navigation — Death of Tilki — Seals — Indian stoicism and contempt of pain — Skookoom, the strong chief — his death — Maiming, an evidence of grief — Arrival at Fort Vancouver — A visit to Fort George — Indian cemeteries — Lewis and Clarke's house — A medal — Visit to Chinook — Hospitality of the Indians — Chinamus' home — The idol — Canine inmates, . . . 349

## CHAPTER XVI

Northern excursion — Salmon — Indian mode of catching them — Flathead children — A storm on the bay — Pintail ducks — Simple mode of killing salmon — Return to Chinook — Indian garrulity — Return to Fort George — Preparations for a second trip to the Sandwich Islands — Detention within the cape, . . . . . 365

# NARRATIVE OF A JOURNEY ACROSS THE ROCKY MOUNTAINS, &c.

---

## CHAPTER I

Arrival at St. Louis — Preparations for the journey — Sâque Indians — Their appearance, dress, and manners — Squaws — Commencement of a pedestrian tour — Sandhill cranes — Prairie settlers — Their hospitality — Wild pigeons, golden plovers and prairie hens — Mr. P. and his daughters — An abundant repast — Simplicity of the prairie maidens — A deer and turkey hunt — Loutre Lick hotel — Unwelcome bed-fellows — A colored Charon — Comfortable quarters — Young men of the west — Reflections on leaving home — Loquacity of the inhabitants — Gray squirrels — Boonville — Parroquets — Embarkation in a steamboat — Large catfish — Accident on board the boat — Arrival at Independence — Description of the town — Procure a supply of horses — Encampment of the Rocky Mountain company — Character of the men — Preparation for departure — Requisites of a leader — Backwoods familiarity — Milton Sublette and his band — Rev. Jason Lee, the missionary — A letter from home — Mormonites — Military discipline and its consequences.

ON the evening of the 24th of March, 1834, Mr. NUTTALL<sup>1</sup> and myself arrived at St. Louis, in the steamboat Boston, from Pittsburg.

On landing, we had the satisfaction to learn that Captain WYETH was already there, and on the afternoon of the next day we called upon him, and consulted him in reference to the outfit which it would be necessary to purchase for the journey. He accompanied us to a store in the town, and selected a number of articles for us, among which were several pairs of leathern [10] pantaloons, enormous overcoats, made of green blankets, and white wool hats, with

---

<sup>1</sup> For sketch of Thomas Nuttall, see preface to Nuttall's *Journal*, our volume xiii.— ED.

round crowns, fitting tightly to the head, brims five inches wide, and almost hard enough to resist a rifle ball.

The day following we saw about one hundred Indians of the Sâque tribe, who had left their native forests for the purpose of treating for the sale of some land at the Jefferson barracks.<sup>2</sup> They were dressed and decorated in the true primitive style; their heads shaved closely, and painted with alternate stripes of fiery red and deep black, leaving only the long scalping tuft, in which was interwoven a quantity of elk hair and eagle's feathers. Each man was furnished with a good blanket, and some had an under dress of calico, but the greater number were entirely naked to the waist. The faces and bodies of the men were, almost without an exception, fantastically painted, the predominant color being deep red, with occasionally a few stripes of dull clay white around the eyes and mouth. I observed one whose body was smeared with light colored clay, interspersed with black streaks. They were unarmed, with the exception of tomahawks and knives. The chief of the band,

---

<sup>2</sup> For the early history of the Sauk Indians, see J. Long's *Voyages*, in our volume ii, p.185, note 85. By the treaty of 1804 they ceded a large portion of their lands (in the present Wisconsin, Iowa, and Illinois) to the United States. Upon removing to the west of the Mississippi, as per agreement with the federal government, they broke into several well-defined and often quarrelsome bands. This division was intensified by the War of 1812-15, when part of the tribe aided the British against the American border. The so-called Missouri band, dwelling north of that river in the present state of the name, in 1815 made with the United States a treaty of friendship, which was kept with fidelity. In 1830 a second land cession was made by the Sauk, and after the Black Hawk War (1832), in which the Missouri band took no part, they were desirous of moving to some permanent home south of the Missouri River. It was in pursuit of this intention, doubtless, that the visit recorded by Townsend was made. The final treaty therefor was not drawn until 1836.

Jefferson Barracks, just south of St. Louis on the Mississippi River, were built for the federal government (1826) on a site secured from the village of Carondelet (1824). General Henry Atkinson was in charge of the erection of the fort to which the garrison was (August, 1826) transferred from Bellefontaine on the Missouri. The post has been in continuous occupation since its erection.—ED.

(who is said to be Black Hawk's father-in-law,<sup>3</sup>) was a large dignified looking man, of perhaps fifty-five years of age, distinguished from the rest, by his richer habiliments, a more profuse display of trinkets in his ears, (which were cut and gashed in a frightful manner to receive them,) and above all, by a huge necklace made of the claws of the grizzly bear. The squaws, of whom there were about twenty, were dressed very much like the men, and at a little distance could scarcely be distinguished from them. Among them was an old, superannuated crone, who, soon after her arrival, had been presented with a broken umbrella. The only use that she made of it was to wrench the plated ends from the whalebones, string them on a piece of wire, take her knife from her belt, with which she deliberately cut a slit of an inch in length [11] along the upper rim of her ear, and insert them in it. I saw her soon after this operation had been performed; her cheeks were covered with blood, and she was standing with a vast deal of assumed dignity among her tawny sisters, who evidently envied her the possession of the worthless baubles.

28th.—Mr. N. and myself propose starting to-morrow on foot towards the upper settlements, a distance of about three hundred miles. We intend to pursue our journey

---

<sup>3</sup> Black Hawk whose Indian name was Makataineshekiakiah (black sparrowhawk) was born among the Sauk in 1767. A chief neither by heredity nor election, he became by superior ability leader of the so-called British band, with headquarters at Saukenak, near Rock Island, Illinois. He participated in Tecumseh's battle (1811), and those about Detroit in the War of 1812-15, and made many raids upon the American settlements, until 1816 when a treaty of amity was signed with the United States. The chief event of his career was the war of 1832, known by his name. Consult on this subject, Thwaites, "Black Hawk War," in *How George Rogers Clark won the Northwest* (Chicago, 1903). At its conclusion this picturesque savage leader was captured, sent a prisoner to Jefferson Barracks, and later confined at Fortress Monroe, Virginia. After an extended tour of the Eastern states, Black Hawk returned to Iowa, where he was placed under the guardianship of his rival Keokuk, and where in 1838 he died. His wife was Asshawequa (Singing Bird), who died in Kansas (1846).—ED.

leisurely, as we have plenty of time before us, and if we become tired, we can enter the stage which will probably overtake us.

29th.— This morning our Indians returned from the barracks, where I understand they transacted their business satisfactorily. I went on board the boat again to see them. I feel very much interested in them, as they are the first Indians I have ever seen who appear to be in a state of uncultivated nature, and who retain the savage garb and manners of their people. They had engaged the entire covered deck for their especial use, and were lolling about in groups, wrapped in their blankets. Some were occupied in conversation, others seemed more contemplative, and appeared to be thinking deeply, probably of the business which brought them amongst us. Here and there two might be seen playing a Spanish game with cards, and some were busily employed in rendering themselves more hideous with paint. To perform this operation, the dry paint is folded in a thin muslin or gauze cloth, tied tightly and beaten against the face, and a small looking-glass is held in the other hand to direct them where to apply it. Two middle-aged squaws were frying beef, which they distributed around to the company in wooden bowls, and several half loaves of bread were circulating rapidly amongst them, by being tossed from one to another, each taking a huge bite of it. There were among the company, several younger females, but they were all so *hard javored* that I could not feel much sympathy with them, and was therefore not anxious to cultivate [12] their acquaintance. There was another circumstance, too, that was not a very attractive one; I allude to the custom so universal amongst Indians, of seeking for vermin in each other's heads, and then *eating* them. The fair damsels were engaged in this way during most of the time that I remained on board, only suspending their de-

lectable occupation to take their bites of bread as it passed them in rotation. The effect upon my person was what an Irishman would call the attraction of repulsion, as I found myself almost unconsciously edging away until I halted at a most respectable distance from the scene of slaughter.

At noon, Mr. N. and myself started on our pedestrian tour, Captain Wyeth offering to accompany us a few miles on the way. I was glad to get clear of St. Louis, as I felt uncomfortable in many respects while there, and the bustle and restraint of a town was any thing but agreeable to me. We proceeded over a road generally good, a low dry prairie, mostly heavily timbered, the soil underlaid with horizontal strata of limestone, abounding in organic remains, shells, coralines, &c., and arrived in the evening at Florissant, where we spent the night.<sup>4</sup> The next day Captain Wyeth left us for St. Louis, and my companion and myself proceeded on our route. We observed great numbers of the brown, or sandhill crane, (*Grus canadensis*,) flying over us; some flocks were so high as to be entirely beyond the reach of vision, while their harsh, grating voices were very distinctly heard. We saw several flocks of the same cranes while ascending the Mississippi, several days since. At about noon, we crossed the river on a boat worked by horses, and stopped at a little town called St. Charles.<sup>5</sup>

We find it necessary, both for our comfort and convenience, to travel very slowly, as our feet are already becom-

<sup>4</sup> Florissant is an old Spanish town not far from St. Louis, founded soon after the latter. At first it was a trading post and Jesuit mission station, whence it acquired the name of San Fernando, which still applies to the township. Later it was made the country residence of the Spanish governors, and in 1793 was by their authority incorporated and granted five thousand arpents of land for a common. The titles were confirmed by the United States in 1812. In 1823 there was established at Florissant a Jesuit novitiate, among whose founders was Father Pierre de Smet, who was buried there in 1873. Florissant had (1900) a population of 732.—ED.

<sup>5</sup> For St. Charles, see Bradbury's *Travels*, in volume v of our series, p. 39, note 9.—ED.

ing tender, and that we may have an opportunity of observing the country, and collecting interesting specimens. Unfortunately for the pursuits of my companion, the plants (of which he finds a [13] number that are rare and curious) are not yet in flower, and therefore of little use to him. The birds are in considerable numbers, among the principal of which is the large pileated woodpecker, (*Picus pileatus*.)

Mr. N. and myself are both in high spirits. We travel slowly, and without much fatigue, and when we arrive at a house, stop and rest, take a drink of milk, and chat with those we see. We have been uniformly well treated; the living is good, and very cheap, and at any house at which we stop the inhabitants are sure to welcome us to their hospitality and good cheer. They live comfortably, and without much labor; possess a fruitful and easily tilled soil, for which they pay the trifling sum of one dollar and a quarter per acre; they raise an abundance of good Indian corn, potatoes, and other vegetables; have excellent beef and pork, and, in short, every thing necessary for good, wholesome living.

31st.—The road to-day was muddy and slippery, rendered so by a heavy rain which fell last night. This morning, we observed large flocks of wild pigeons passing over, and on the bare prairies were thousands of golden plovers; the ground was often literally covered with them for acres. I killed a considerable number. They were very fat, and we made an excellent meal of them in the evening. The prairie hen, or pinnated grouse, is also very numerous, but in these situations is shy, and difficult to be procured.

Towards evening we were overtaken by a bluff, jolly looking man, on horseback, who, as is usual, stopped, and entered into conversation with us. I saw immediately that he was superior to those we had been accustomed to meet. He did not ply us with questions so eagerly as most, and when he heard that we were naturalists, and were

travelling in that capacity, he seemed to take considerable interest in us. He invited us to stop at his house, which was only a mile beyond, and as night was almost [14] upon us, we accepted the invitation with cheerfulness. Upon arriving at his mansion, our good host threw wide his hospitable doors, and then with a formal, and rather ultra-dignified politeness, making us a low bow, said, "Gentlemen, my name is P., and I am very happy of your company." We seated ourselves in a large, and well-furnished parlor. Mr. P. excused himself for a few minutes, and soon returned, bringing in three fine looking girls, whom he introduced as his daughters. I took a particular fancy to one of them, from a strong resemblance which she bore to one of my female friends at home. These girls were certainly very superior to most that I had seen in Missouri, although somewhat touched with the awkward bashfulness and prudery which generally characterizes the prairie maidens. They had lost their mother when young, and having no companions out of the domestic circle, and consequently no opportunity of aping the manners of the world, were perfect children of nature. Their father, however, had given them a good, plain education, and they had made some proficiency in needle work, as was evinced by numerous neatly worked *samplers* hanging in wooden frames around the room. Anon, supper was brought in. It consisted of pork chops, ham, eggs, Indian bread and butter, tea, coffee, milk, potatoes, *preserved ginger*, and though last, certainly not least in value, an enormous tin dish of plovers, (the contents of my game-bag,) *fricaseed*. Here was certainly a most abundant repast, and we did ample justice to it.

I endeavored to do the agreeable to the fair ones in the evening, and Mr. N. was monopolized by the father, who took a great interest in plants, and was evidently much

gratified by the information my companion gave him on the subject.

The next morning when we rose, it was raining, and much had evidently fallen during the night, making the roads wet and muddy, and therefore unpleasant for pedestrians. I confess [15] I was not sorry for this, for I felt myself very comfortably situated, and had no wish to take to the road. Mr. P. urged the propriety of our stopping at least another day, and the motion being seconded by his fair daughter, (my favorite,) it was irresistible.

On the following morning the sun was shining brightly, the air was fresh and elastic, and the roads tolerably dry, so that there was no longer any excuse for tarrying, and we prepared for our departure. Our good host, grasping our hands, said that he had been much pleased with our visit, and hoped to see us again, and when I bid good bye to the pretty Miss P., I told her that if I ever visited Missouri again, I would go many miles out of my way to see her and her sisters. Her reply was unsophisticated enough. "Do come again, and come in May or June, for then there are plenty of prairie hens, and you can shoot as many as you want, and you must stay a long while with us, and we'll have nice times; good bye; I'm so sorry you're going."

*April 4th.*—I rose this morning at daybreak, and left Mr. N. dreaming of weeds, in a little house at which we stopped last night, and in company with a long, lanky boy, (a son of the poor widow, our hostess,) set to moulding bullets in an old iron spoon, and preparing for deer hunting. The boy shouldered a rusty rifle, that looked almost antediluvian, and off we plodded to a thicket, two miles from the house. We soon saw about a dozen fine deer, and the boy, clapping his old fire-lock to his shoulder, brought down a beautiful doe at the distance of a full hundred yards. Away sprang the rest of the herd, and I crept round the

thicket to meet them. They soon came up, and I fired my piece at a large buck, and wounded the poor creature in the leg; he went limping away, unable to overtake his companions; I felt very sorry, but consoled myself with the reflection that he would soon get well again.

[16] We then gave up the pursuit, and turned our attention to the turkies, which were rather numerous in the thicket. They were shy, as usual, and, when started from their lurking places, ran away like deer, and hid themselves in the underwood. Occasionally, however, they would perch on the high limbs of the trees, and then we had some shots at them. In the course of an hour we killed four, and returned to the house, where, as I expected, Mr. N. was in a fever at my absence, and after a late, and very good breakfast, proceeded on our journey.

We find in this part of the country less timber in the same space than we have yet seen, and when a small belt appears, it is a great relief, as the monotony of a bare prairie becomes tiresome.

Towards evening we arrived at Loutre Lick.<sup>6</sup> Here there is a place called a *Hotel*. A Hotel, forsooth! a pig-stye would be a more appropriate name. Every thing about it was most exceedingly filthy and disagreeable, but no better lodging was to be had, for it might not be proper to apply for accommodation at a private house in the immediate vicinity of a public one. They gave us a wretched supper, not half so good as we had been accustomed to, and we were fain to spend the evening in a comfortless, unfurnished, nasty bar-room, that smelt intolerably of rum and whiskey, to listen to the profane conversation of three or four uncouth individuals, (among whom were the host and his brother,) and

---

<sup>6</sup> Loutre Lick appears to be the hamlet now known as Big Spring, on Loutre Creek, in Loutre Township, Montgomery County. The settlement was made between 1808 and 1810, and was on the highway between St. Charles and Côte sans Dessein.—ED.

to hear long and disagreeably minute discussions upon horse-racing, gambling, and other vices equally unpleasant to us.

The host's brother had been to the Rocky Mountains, and soon learning *our* destination, gave us much unsought for advice regarding our method of journeying; painted in strong colors the many dangers and difficulties which we must encounter, and concluded by advising us to give up the expedition. My fast ebbing patience was completely exhausted. I told him that [17] nothing that he could say would discourage us,—that we went to that house in order to seek repose, and it was unfair to intrude conversation upon us unasked. The ruffian made some grumbling reply, and left us in quiet and undisturbed possession of our bench. We had a miserable time that night. The only spare bed in the house was so intolerably filthy that we dared not undress, and we had hardly closed our eyes before we were assailed by swarms of a vile insect, (the very name of which is offensive,) whose effluvia we had plainly perceived immediately as we entered the room. It is almost needless to say, that very early on the following morning, after paying our reckoning, and refusing the landlord's polite invitation to "*liquorize*," we marched from the house, shook the dust from our feet, and went elsewhere to seek a breakfast.

Soon after leaving, we came to a deep and wide creek, and strained our lungs for half an hour in vain endeavors to waken a negro boy who lived in a hut on the opposite bank, and who, we were told, would ferry us over. He came out of his den at last, half naked and rubbing his eyes to see who had disturbed his slumbers so early in the *morn-*  
*ing*. We told him to hurry over, or we'd endeavor to assist him, and he came at last, with a miserable leaky little skiff that wet our feet completely. We gave him a *pickayune* for

his trouble, and went on. We soon came to a neat little secluded cottage in the very heart of a thick forest, where we found a fine looking young man, with an interesting wife, and a very pretty child about six months old. Upon being told that we wanted some breakfast, the woman tucked up her sleeves, gave the child to her husband, and went to work in good earnest. In a very short time a capital meal was smoking on the board, and while we were partaking of the good cheer, we found our vexation rapidly evaporating. We complimented the handsome young hostess, [18] patted the chubby cheeks of the child, and were in a good humor with every body.

6th.— Soon after we started this morning, we were overtaken by a stage which was going to Fulton, seven miles distant, and as the roads were somewhat heavy, we concluded to make use of this convenience. The only passengers were three young men from the far west, who had been to the eastward purchasing goods, and were then travelling homeward. Two of them evidently possessed a large share of what is called *mother wit*, and so we had jokes without number. Some of them were not very refined, and perhaps did not suit the day very well, (it being the Sabbath,) yet none of them were really offensive, but seemed to proceed entirely from an exuberance of animal spirits.

In about an hour and a half we arrived at Fulton, a pretty little town, and saw the villagers in their holiday clothes parading along to church.<sup>7</sup> The bell at that moment sounded, and the peal gave rise to many reflections. It might be long ere I should hear the sound of the "church-going bell" again. I was on my way to a far, far country,

<sup>7</sup> Fulton is the seat of Callaway County, laid out in 1825, and originally christened Volney; but its appellation was soon changed in honor of Robert Fulton, inventor of the steamboat. The first settler and proprietor was George Nichols. In 1832 the population was about two hundred; by 1900 it had increased to nearly five thousand.— ED.

and I did not know that I should ever be permitted to revisit my own. I felt that I was leaving the scenes of my childhood; the spot which had witnessed all the happiness I ever knew, the home where all my affections were centered. I was entering a land of strangers, and would be compelled hereafter to mingle with those who might look upon me with indifference, or treat me with neglect.

These reflections were soon checked, however. We took a light lunch at the tavern where we stopped. I shouldered my gun, Mr. N. his stick and bundle, and off we trudged again, westward, ho! We soon lost sight of the prairie entirely, and our way lay through a country thickly covered with heavy timber, the roads very rough and stony, and we had frequently to ford [19] the creeks on our route, the late freshets having carried away the bridges.

Our accommodation at the farm houses has generally been good and comfortable, and the inhabitants obliging, and anxious to please. They are, however, exceedingly inquisitive, propounding question after question, in such quick succession as scarcely to allow you breathing time between them. This kind of catechising was at first very annoying to us, but we have now become accustomed to it, and have hit upon an expedient to avoid it in a measure. The first question generally asked, is, "where do you come from, gentlemen?" We frame our answer somewhat in the style of Dr. Franklin. "We come from Pennsylvania; our names, Nuttall and Townsend; we are travelling to Independence on foot, for the purpose of seeing the country to advantage, and we intend to proceed from thence across the mountains to the Pacific. Have you any mules to sell?" The last clause generally changes the conversation, and saves us trouble. To a stranger, and one not accustomed to the manners of the western people, this kind of interrogating seems to imply a lack of modesty and common de-

gency, but it is certainly not so intended, each one appearing to think himself entitled to gain as much intelligence regarding the private affairs of a stranger, as a very free use of his lingual organ can procure for him.

We found the common gray squirrel very abundant in some places, particularly in the low bottoms along water courses; in some situations we saw them skipping on almost every tree. On last Christmas day, at a squirrel hunt in this neighborhood, about thirty persons killed the astonishing number of *twelve hundred*, between the rising and setting of the sun.

This may seem like useless barbarity, but it is justified by the consideration that all the crops of corn in the country are frequently [20] destroyed by these animals. This extensive extermination is carried on every year, and yet it is said that their numbers do not appear to be much diminished.

About mid-day on the 7th, we passed through a small town called Columbia, and stopped in the evening at Rocheport, a little village on the Missouri river.<sup>8</sup> We were anxious to find a steam-boat bound for Independence, as we feared we might linger too long upon the road to make the necessary preparations for our contemplated journey.

On the following day, we crossed the Missouri, opposite Rocheport, in a small skiff. The road here, for several miles, winds along the bank of the river, amid fine groves of sycamore and Athenian poplars, then stretches off for about three miles, and does not again approach it until you arrive at Boonville. It is by far the most hilly road that we

---

<sup>8</sup> Columbia, seat of Boone County and of the Missouri State University, was organized first as Smithton. Later (1820), when made the county seat, the name was changed, and a period of prosperity began. The location of the university was secured in 1839. In 1900 the population was 5,651.

Rocheport, on the Missouri River, at the mouth of Moniteau Creek, was laid out in 1832 on land obtained on a New Madrid certificate. At one time the place rivaled Columbia. Its present population is about six hundred.—ED.

have seen, and I was frequently reminded, while travelling on it, of our Chester county. We entered the town of Boonville early in the afternoon, and took lodgings in a very clean, and respectably kept hotel. I was much pleased with Boonville. It is the prettiest town I have seen in Missouri; situated on the bank of the river, on an elevated and beautiful spot, and overlooks a large extent of lovely country. The town contains two good hotels, (but no *grog shops*, properly so called,) several well-furnished stores, and five hundred inhabitants. It was laid out thirty years ago by the celebrated western pioneer, whose name it bears.<sup>9</sup>

We saw here vast numbers of the beautiful parrot of this country, (the *Psittacus carolinensis*.) They flew around us in flocks, keeping a constant and loud screaming, as though they would chide us for invading their territory; and the splendid green and red of their plumage glancing in the sunshine, as they whirled and circled within a few feet of us, had a most magnificent appearance. They seem entirely unsuspecting of danger, and after being fired at, only huddle closer together, as if to obtain protection [21] from each other, and as their companions are falling around them, they curve down their necks, and look at them fluttering upon the ground, as though perfectly at a loss to account for so unusual an occurrence. It is a most inglorious sort of shooting; down right, cold-blooded murder.<sup>10</sup>

On the afternoon of the 9th, a steamboat arrived, on board of which we were surprised and pleased to find Captain Wyeth, and our "*plunder*." We embarked immediately, and soon after, were puffing along the Missouri, at the rate of seven miles an hour. When we stopped in the after-

---

<sup>9</sup> For Boonville, see note 59, p. 89, *ante*. Townsend is in error in attributing its founding to Daniel Boone, although named in his honor.—ED.

<sup>10</sup> For the appearance of paroquets in this latitude, see Cuming's *Tour* in our volume iv, p. 161, note 108.—ED.

noon to "wood," we were gratified by a sight of one of the enormous catfish of this river and the Mississippi, weighing full sixty pounds. It is said, however, that they are sometimes caught of at least double this weight. They are excellent eating, coarser, but quite as good as the common small catfish of our rivers. There is nothing in the scenery of the river banks to interest the traveller particularly. The country is generally level and sandy, relieved only by an occasional hill, and some small rocky acclivities.

A shocking accident happened on board during this trip. A fine looking black boy (a slave of one of the deck passengers) was standing on the platform near the fly-wheel. The steam had just been stopped off, and the wheel was moving slowly by the impetus it had acquired. The poor boy unwittingly thrust his head between the spokes; a portion of the steam was at that moment let on, and his head and shoulders were torn to fragments. We buried him on shore the same day; the poor woman, his mistress, weeping and lamenting over him as for her own child. She told me she had brought him up from an infant; he had been as an affectionate son to her, and for years her only support.

*March 20th.*—On the morning of the 14th, we arrived at Independence landing, and shortly afterwards, Mr. N. and [22] myself walked to the town, three miles distant. The country here is very hilly and rocky, thickly covered with timber, and no prairie within several miles.

The site of the town is beautiful, and very well selected, standing on a high point of land, and overlooking the surrounding country, but the town itself is very indifferent; <sup>11</sup> the houses, (about fifty,) are very much scattered, composed of logs and clay, and are low and inconvenient. There are six or eight stores here, two taverns, and a few tipling houses. As we did not fancy the town, nor the society

<sup>11</sup> For Independence, see our volume xix, p. 189, note 34 (Gregg).—ED.

that we saw there, we concluded to take up our residence at the house on the landing until the time of starting on our journey. We were very much disappointed in not being able to purchase any mules here, all the salable ones having been bought by the Santa Fee traders, several weeks since. Horses, also, are rather scarce, and are sold at higher prices than we had been taught to expect, the demand for them at this time being greater than usual. Mr. N. and myself have, however, been so fortunate as to find five excellent animals amongst the hundreds of wretched ones offered for sale, and have also engaged a man to attend to packing our loads, and perform the various duties of our camp.

The men of the party, to the number of about fifty, are encamped on the bank of the river, and their tents whiten the plain for the distance of half a mile. I have often enjoyed the view on a fine moonlight evening from the door of the house, or perched upon a high hill immediately over the spot. The beautiful white tents, with a light gleaming from each, the smouldering fires around them, the incessant hum of the men, and occasionally the lively notes of a bacchanalian song, softened and rendered sweeter by distance. I probably contemplate these and similar scenes with the more interest, as they exhibit the manner in which the next five months of my life are to be spent.

[23] We have amongst our men, a great variety of dispositions. Some who have not been accustomed to the kind of life they are to lead in future, look forward to it with eager delight, and talk of stirring incidents and hair-breadth 'scapes. Others who are more experienced seem to be as easy and unconcerned about it as a citizen would be in contemplating a drive of a few miles into the country. Some have evidently been reared in the shade, and not accustomed to hardships, but the majority are strong, able-bodied men, and many are almost as rough

as the grizzly bears, of their feats upon which they are fond of boasting.

During the day the captain keeps all his men employed in arranging and packing a vast variety of goods for carriage. In addition to the necessary clothing for the company, arms, ammunition, &c., there are thousands of trinkets of various kinds, beads, paint, bells, rings, and such trumpery, intended as presents for the Indians, as well as objects of trade with them. The bales are usually made to weigh about eighty pounds, of which a horse carries two.

I am very much pleased with the manner in which Captain W. manages his men. He appears admirably calculated to gain the good will, and ensure the obedience of such a company, and adopts the only possible mode of accomplishing his end. They are men who have been accustomed to act independently; they possess a strong and indomitable spirit which will never succumb to authority, and will only be conciliated by kindness and familiarity. I confess I admire this spirit. It is noble; it is free and characteristic, but for myself, I have not been accustomed to seeing it exercised, and when a rough fellow comes up without warning, and slaps me on the shoulder, with, "stranger what for a gun is that you carry?" I start, and am on the point of making an angry reply, but I remember where I am, check the feeling instantly, and submit the weapon to his inspection. Captain W. [24] may frequently be seen sitting on the ground, surrounded by a knot of his independents, consulting them as to his present arrangements and future movements, and paying the utmost deference to the opinion of the least among them.

We were joined here by Mr. Milton Sublette, a trader and trapper of some ten or twelve years' standing. It is his intention to travel with us to the mountains, and we

are very glad of his company, both on account of his intimate acquaintance with the country, and the accession to our band of about twenty trained hunters, "true as the steel of their tried blades," who have more than once followed their brave and sagacious leader over the very track which we intend to pursue. He appears to be a man of strong sense and courteous manners, and his men are enthusiastically attached to him.<sup>12</sup>

Five missionaries, who intend to travel under our escort, have also just arrived. The principal of these is a Mr. Jason Lee, (a tall and powerful man, who looks as though he were well calculated to buffet difficulties in a wild country,) his nephew, Mr. Daniel Lee, and three younger men of respectable standing in society, who have arrayed themselves under the missionary banner, chiefly for the gratification of seeing a new country, and participating in strange adventures.<sup>13</sup>

---

<sup>12</sup> For Milton Sublette, see note 44, p. 67, *ante*.—ED.

<sup>13</sup> The establishment of the Oregon mission was due to the appeal published in the East, of a deputation (1831) of Flathead chiefs to General William Clark at St. Louis for the purpose of gaining religious instruction. The leaders of the Methodist church, thus aroused, chose (1833) Jason Lee to found the mission to the Western Indians, and made an appropriation for the purpose. Jason Lee was born in Canada (1803), of American parents; he had already taught Indians in his native village, and attended Wesleyan Seminary at Wilbraham, Massachusetts. After several efforts to arrange the journey to Oregon, he heard of Wyeth's return, and requested permission to join his outgoing party. Arrived at Vancouver, he determined to establish his mission station in the Willamette valley, where he labored for ten years, building a colony as well as a mission. Once he returned to the United States (1838-40) for money and reinforcements. In 1844, while visiting Honolulu, he learned that he had been superseded in the charge of the mission, and returned to the United States to die the following year, near his birth-place in Lower Canada.

Daniel Lee, who accompanied his uncle, seconded the latter's efforts in the mission establishment. In 1835 he voyaged to Hawaii for his health, and in 1838 established the Dalles mission, where he labored until his return to the United States in 1843. The other missionaries were Cyrus Shepard, a lay helper and teacher — who died at the Willamette mission, January 1, 1840 — C. M. Walker, and A. L. Edwards, who joined the party in Missouri.—ED.

My favorites, the birds, are very numerous in this vicinity, and I am therefore in my element. Parroquets are plentiful in the bottom lands, the two species of squirrel are abundant, and rabbits, turkies, and deer are often killed by our people.

I was truly rejoiced to receive yesterday a letter from my family. I went to the office immediately on my arrival here, confidently expecting to find one lying there for me; I was told there was none, and I could not believe it, or would not; I took all the letters in my hand, and examined each of them myself, and I suppose that during the process my expressions of disappointment were "loud and deep," as I observed the eyes of a number [25] of persons in the store directed towards me with manifest curiosity and surprise. The obtuse creatures could not appreciate my feelings. I was most anxious to receive intelligence from home, as some of the members of the family were indisposed when I left, and in a few days more I should be traversing the uncultivated prairie and the dark forest, and perhaps never hear from my home again. The letter came at last, however, and was an inexpressible consolation to me.

The little town of Independence has within a few weeks been the scene of a brawl, which at one time threatened to be attended with serious consequences, but which was happily settled without bloodshed. It had been for a considerable time the stronghold of a sect of fanatics, called Mormons, or Mormonites, who, as their numbers increased, and they obtained power, showed an inclination to lord it over the less assuming inhabitants of the town. This was a source of irritation which they determined to rid themselves of in a summary manner, and accordingly the whole town rose, *en masse*, and the poor followers of the prophet were forcibly ejected from the community. They took refuge in the little town of Liberty, on the opposite

side of the river, and the villagers here are now in a constant state of feverish alarm. Reports have been circulated that the Mormons are preparing to attack the town, and put the inhabitants to the sword, and they have therefore stationed sentries along the river for several miles, to prevent the landing of the enemy.<sup>14</sup> The troops parade and study military tactics every day, and seem determined to repel, with spirit, the threatened invasion. The probability is, that the report respecting the attack, is, as John Bull says, "all humbug," and this training and marching has already been a source of no little annoyance to us, as the miserable little skeleton of a saddler who is engaged to work for our party, has neglected his business, and must go a soldiering in stead. A day or two ago, I tried to convince the little man that he was of no use to the army, [26] for if a Mormon were to say *pook* at him, it would blow him away beyond the reach of danger or of glory; but he thought not, and no doubt concluded that he was a "marvellous proper man," so we were put to great inconvenience waiting for our saddles.

---

<sup>14</sup> For these Mormon troubles, see Gregg's *Commerce of the Prairies*, in our volume xx, pp. 93-99.—ED.

## [27] CHAPTER II

Departure of the caravan — A storm on the prairie — Arrangement of the camp — The cook's desertion — Kansas Indians — Kansas river — Indian lodges — Passage of the river — Buffalo canoes — Kansas chief — Costume of the Indians — Upper Kaw village — Their wigwams — Catfish and ravens — Return of Mr. Sublette — Pawnee trace — Desertion of three men — Difficulties occasioned by losing the trail — Intelligence of Mr. Sublette's party — Escape of the band of horses — Visit of three Otto Indians — Anecdote of Richardson, the chief hunter — His appearance and character — White wolves and antelopes — Buffalo bones — Sublette's deserted camp — Lurking wolves.

ON the 28th of April, at 10 o'clock in the morning, our caravan, consisting of seventy men, and two hundred and fifty horses, began its march; Captain Wyeth and Milton Sublette took the lead, Mr. N. and myself rode beside them; then the men in double file, each leading, with a line, two horses heavily laden, and Captain Thing (Captain W.'s assistant) brought up the rear. The band of missionaries, with their horned cattle, rode along the flanks.

I frequently sallied out from my station to look at and admire the appearance of the cavalcade, and as we rode out from the encampment, our horses prancing, and neighing, and pawing the ground, it was altogether so exciting that I could scarcely contain myself. Every man in the company seemed to feel a portion of the same kind of enthusiasm; uproarious bursts of merriment, and gay and lively songs, were constantly echoing along the line. We were certainly a most merry and happy company. What cared we for the future? We had reason to expect that ere long difficulties and dangers, in various shapes, [28] would assail us, but no anticipation of reverses could check the happy exuberance of our spirits.

Our road lay over a vast rolling prairie, with occasional

small spots of timber at the distance of several miles apart, and this will no doubt be the complexion of the track for some weeks.

In the afternoon we crossed the *Big Blue* river at a shallow ford.<sup>15</sup> Here we saw a number of beautiful yellow-headed troopials, (*Icterus zanthrocephalus*,) feeding upon the prairie in company with large flocks of black birds, and like these, they often alight upon the backs of our horses.

29th.—A heavy rain fell all the morning, which had the effect of calming our transports in a great measure, and in the afternoon it was succeeded by a tremendous hail storm. During the rain, our party left the road, and proceeded about a hundred yards from it to a range of bushes, near a stream of water, for the purpose of encamping. We had just arrived here, and had not yet dismounted, when the hail storm commenced. It came on very suddenly, and the stones, as large as musket balls, dashing upon our horses, created such a panic among them, that they plunged, and kicked, and many of them threw their loads, and fled wildly over the plain. They were all overtaken, however, and as the storm was not of long duration, they were soon appeased, and *staked* for the night.

To stake or fasten a horse for the night, he is provided with a strong leathern halter, with an iron ring attached to the chin strap. To this ring, a rope of hemp or plaited leather, twenty-two feet in length, is attached, and the opposite end of the line made fast with several clove hitches around an oak or hickory pin, two and a half feet long. The top of this pin or stake is ringed with iron to prevent its being

---

<sup>15</sup> Townsend is here in error. It would be impossible to reach the Big Blue River the first day out from Independence, and before crossing the Kansas. The former stream is a northern tributary of the latter, over a hundred miles from its mouth. The Oregon Trail led along its banks for some distance, crossing at the entrance of the Little Blue.—ED.

bruised, and it is then driven to the head in the ground. For greater security, hopples made of stout leather are buckled around the fore legs; and then, [29] if the tackling is good, it is almost impossible for a horse to escape. Care is always taken to stake him in a spot where he may eat grass all night. The animals are placed sufficiently far apart to prevent them interfering with each other.

Camping out to-night is not so agreeable as it might be, in consequence of the ground being very wet and muddy, and our blankets (our only bedding) thoroughly soaked; but we expect to encounter greater difficulties than these ere long, and we do not murmur.

A description of the formation of our camp may, perhaps, not be amiss here. The party is divided into messes of eight men, and each mess is allowed a separate tent. The captain of a mess, (who is generally an "old hand," *i. e.* an experienced forester, hunter, or trapper,) receives each morning the rations of pork, flour, &c. for his people, and they choose one of their body as cook for the whole. Our camp now consists of nine messes, of which Captain W.'s forms one, although it only contains four persons besides the cook.

When we arrive in the evening at a suitable spot for an encampment, Captain W. rides round a space which he considers large enough to accommodate it, and directs where each mess shall pitch its tent. The men immediately unload their horses, and place their bales of goods in the direction indicated, and in such manner, as in case of need, to form a sort of fortification and defence. When all the messes are arranged in this way, the camp forms a hollow square, in the centre of which the horses are placed and staked firmly to the ground. The guard consists of from six to eight men, and is relieved three times each night, and so arranged that each gang may serve alternate nights. The captain of a

guard (who is generally also the captain of a mess) collects his people at the appointed hour, and posts them around outside the camp in such situations that they may command [30] a view of the environs, and be ready to give the alarm in case of danger.

The captain cries the hour regularly by a watch, and *all's well*, every fifteen minutes, and each man of the guard is required to repeat this call in rotation, which if any one should fail to do, it is fair to conclude that he is asleep, and he is then immediately visited and stirred up. In case of defection of this kind, our laws adjudge to the delinquent the hard sentence of walking three days. As yet none of our poor fellows have incurred this penalty, and the probability is, that it would not at this time be enforced, as we are yet in a country where little molestation is to be apprehended; but in the course of another week's travel, when thieving and ill-designing Indians will be outlying on our trail, it will be necessary that the strictest watch be kept, and, for the preservation of our persons and property, that our laws shall be rigidly enforced.

*May 1st.*— On rising this morning, and inquiring about our prospects of a breakfast, we discovered that the cook of our mess (a little, low-browed, ill-conditioned Yankee) had decamped in the night, and left our service to seek for a better. He probably thought the duties too hard for him, but as he was a miserable cook, we should not have much regretted his departure, had he not thought proper to take with him an excellent rifle, powder-horn, shot-pouch, and other matters that did not belong to him. It is only surprising that he did not select one of our best horses to carry him; but as he had the grace to take his departure on foot, and we have enough men without him, we can wish him God speed, and a fair run to the settlements.

We encamped this evening on a small branch of the Kansas

river. As we approached our stopping place, we were joined by a band of Kansas Indians, (commonly called *Kaw* Indians.)<sup>16</sup> They are encamped in a neighboring copse, where they have [31] six lodges. This party is a small division of a portion of this tribe, who are constantly wandering; but although their journeys are sometimes pretty extensive, they seldom approach nearer to the settlements than they are at present. They are very friendly, are not so tawdrily decorated as those we saw below, and use little or no paint. This may, however, be accounted for by their not having the customary ornaments, &c., as their ears are filled with trinkets of various kinds, and are horribly gashed in the usual manner. The dress of most that we have seen, has consisted of ordinary woollen pantaloons received from the whites, and their only covering, from the waist up, is a blanket or buffalo robe. The head is shaved somewhat in the manner of the *Sâques* and *Foxes*, leaving the well known scalping tuft; but unlike the Indians just mentioned, the hair is allowed to grow upon the middle of the head, and extends backwards in a longitudinal ridge to the occiput. It is here gathered into a kind of queue, plaited, and suffered to hang down the back. There were amongst them several squaws, with young children tied to their backs, and a number of larger urchins ran about our camp wholly naked.

The whole of the following day we remained in camp, trading buffalo robes, *apishemeaus*,<sup>17</sup> &c., of the Indians. These people became at length somewhat troublesome to us who were not traders, by a very free exercise of their begging

---

<sup>16</sup> For the first stretches of the Oregon Trail and the crossing of the Kansas, see note 30, p. 49, *ante*. The Kansa Indians are noticed in Bradbury's *Travels*, our volume v, p. 67, note 37.—ED.

<sup>17</sup> These are mats made of rushes, used for building wigwams, carpets, beds, and coverings of all sorts. The early Algonquian term was "apaquois;" see *Wisconsin Historical Collections*, xvi, index. "Apichement" is the usual form of the word.—ED.

propensities. They appear to be exceedingly poor and needy, and take the liberty of asking unhesitatingly, and without apparent fear of refusal, for any articles that happen to take their fancy.

I have observed, that among the Indians now with us, none but the chief uses the pipe. He smokes the article called *kanikanik*,—a mixture of tobacco and the dried leaves of the poke plant, (*Phytolacca decandra*.) I was amused last evening by the old chief asking me in his impressive manner, (first by pointing with his finger towards the sunset, and then raising his [32] hands high over his head,) if I was going to the mountains. On answering him in the affirmative, he depressed his hands, and passed them around his head in both directions, then turned quickly away from me, with a very solemn and significant *ugh!* He meant, doubtless, that my brain was turned; in plain language, that I was a fool. This may be attributed to his horror of the Black-foot Indians, with whom a portion of his tribe was formerly at war. The poor Kaws are said to have suffered dreadfully in these savage conflicts, and were finally forced to abandon the country to their hereditary foes.

We were on the move early the next morning, and at noon arrived at the Kansas river, a branch of the Missouri.<sup>18</sup> This is a broad and not very deep stream, with the water dark and turbid, like that of the former. As we approached it, we saw a number of Indian lodges, made of saplings driven into the ground, bent over and tied at top, and covered with bark and buffalo skins. These lodges, or wigwams, are numerous on both sides of the river. As we passed them, the inhabitants, men, women, and children, flocked out to see us, and almost prevented our progress by their eager greetings. Our party stopped on the bank of the river,

<sup>18</sup> For the Kansas River, see James's *Long's Expedition*, in our volume xiv, p. 174, note 140.—ED.

and the horses were unloaded and driven into the water. They swam beautifully, and with great regularity, and arrived safely on the opposite shore, where they were confined in a large lot, enclosed with a fence. After some difficulty, and considerable detention, we succeeded in procuring a large flat bottomed boat, embarked ourselves and goods in it, and landed on the opposite side near our horse pen, where we encamped. The lodges are numerous here, and there are also some good frame houses inhabited by a few white men and women, who subsist chiefly by raising cattle, which they drive to the settlements below. They, as well as the Indians, raise an abundance of good corn; potatoes and other vegetables are also plentiful, and they can therefore live sufficiently well.

[33] The canoes used by the Indians are mostly made of buffalo skins, stretched, while recent, over a light frame work of wood, the seams sewed with sinews, and so closely, as to be wholly impervious to water. These light vessels are remarkably buoyant, and capable of sustaining very heavy burthens.<sup>19</sup>

In the evening the principal Kansas chief paid us a visit in our tent. He is a young man about twenty-five years of age, straight as a poplar, and with a noble countenance and bearing, but he appeared to me to be marvellously deficient in most of the requisites which go to make the character of a *real* Indian chief, at least of such Indian chiefs as we read of in our popular books. I begin to suspect, in truth, that these lofty and dignified attributes are more apt to exist in the fertile brain of the novelist, than in reality. Be this as it may, *our* chief is a very lively, laughing, and rather playful personage; perhaps he may put on his dignity, like a glove, when it suits his convenience.

---

<sup>19</sup> For these skin canoes, see illustration in Maximilian's *Travels*, atlas, our volume xxv.—ED.

We remained in camp the whole of next day, and traded with the Indians for a considerable number of robes, *apishe-meaus*, and halter ropes of hide. Our fat bacon and tobacco were in great demand for these useful commodities.

The Kaws living here appear to be much more wealthy than those who joined our camp on the prairie below. They are in better condition, more richly dressed, cleaner, and more comfortable than their wandering brothers. The men have generally fine countenances, but all the women that I have seen are homely. I cannot admire them. Their dress consists, universally of deer skin leggings, belted around the loins, and over the upper part of the body a buffalo robe or blanket.

On the 20th in the morning, we packed our horses and rode out of the Kaw settlement, leaving the river immediately, and making a N. W. by W. course — and the next day came to another village of the same tribe, consisting of about thirty lodges, and situated in the midst of a beautiful level prairie.

[34] The Indians stopped our caravan almost by force, and evinced so much anxiety to trade with us, that we could not well avoid gratifying them. We remained with them about two hours, and bought corn, moccasins and leggings in abundance. The lodges here are constructed very differently from those of the lower village. They are made of large and strong timbers, a ridge pole runs along the top, and the different pieces are fastened together by leathern thongs. The roofs,—which are single, making but one angle,—are of stout poplar bark, and form an excellent defence, both against rain and the rays of the sun, which must be intense during midsummer in this region. These prairies are often visited by heavy gales of wind, which would probably demolish the huts, were they built of frail materials like those below. We encamped in the evening on a small

stream called Little Vermillion creek,<sup>20</sup> where we found an abundance of excellent catfish, exactly similar to those of the Schuylkill river. Our people caught them in great numbers. Here we first saw the large ravens, (*Corvus corax*.) They hopped about the ground all around our camp; and as we left it, they came in, pell-mell, croaking, fighting, and scrambling for the few fragments that remained.

8th.—This morning Mr. Sublette left us to return to the settlements. He has been suffering for a considerable time with a fungus in one of his legs, and it has become so much worse since we started, in consequence of irritation caused by riding, that he finds it impossible to proceed. His departure has thrown a gloom over the whole camp. We all admired him for his amiable qualities, and his kind and obliging disposition. For myself, I had become so much attached to him, that I feel quite melancholy about his leaving us.<sup>21</sup>

[35] The weather is now very warm, and there has been a dead calm all day, which renders travelling most uncomfortable. We have frequently been favored with fresh breezes, which make it very agreeable, but the moment these fail us we are almost suffocated with intense heat. Our rate of travelling is about twenty miles per day, which, in this warm weather, and with heavily packed horses, is as much as we can accomplish with comfort to ourselves and animals.

On the afternoon of the next day, we crossed a broad Indian trail, bearing northerly, supposed to be about five days old, and to have been made by a war party of Pawnees. We are now in the country traversed by these Indians, and are daily expecting to see them, but Captain W. seems very desirous to avoid them, on account of their well known

<sup>20</sup> Now usually known as the Red Vermilion, a northern tributary of Kansas River in Pottawatomie County, Kansas.—ED.

<sup>21</sup> I have since learned that his limb was twice amputated; but notwithstanding this, the disease lingered in the system, and about a year ago, terminated his life.

—TOWNSEND.

thieving propensities, and quarrelsome disposition. These Indians go every year to the plains of the Platte, where they spend some weeks in hunting the buffalo, jerking their meat, and preparing their skins for robes; they then push on to the Black Hills, and look out for the parties of Blackfeet, which are also bound to the Platte river plains. When the opposing parties come in collision, (which frequently happens,) the most cruel and sanguinary conflicts ensue. In the evening, three of our men deserted. Like our quondam cook, they all took rifles, &c., that did not belong to them, and one of these happened to be a favorite piece of Captain W.'s, which had done him good service in his journey across this country two years ago. He was very much attached to the gun, and in spite of his calm and cool philosophy in all vexatious matters, he cannot altogether conceal his chagrin.

The little streams of this part of the country are fringed with a thick growth of pretty trees and bushes, and the buds are now swelling, and the leaves expanding, to "welcome back the spring." The birds, too, sing joyously amongst them, grosbeaks, thrushes, and buntings, a merry and musical band. I am particularly [36] fond of sallying out early in the morning, and strolling around the camp. The light breeze just bends the tall tops of the grass on the boundless prairie, the birds are commencing their matin carollings, and all nature looks fresh and beautiful. The horses of the camp are lying comfortably on their sides, and seem, by the glances which they give me in passing, to know that their hour of toil is approaching, and the patient kine are ruminating in happy unconsciousness.

11th.—We encountered some rather serious difficulties to-day in fording several wide and deep creeks, having muddy and miry bottoms. Many of our horses, (and particularly those that were packed,) fell into the water, and it was with

the greatest difficulty and labor that they were extricated. Some of the scenes presented were rather ludicrous to those who were not actors in them. The floundering, kicking, and falling of horses in the heavy slough, man and beast rolling over together, and *squattering* amongst the black mud, and the wo-begone looks of horse, rider, and horse-furniture, often excited a smile, even while we pitied their begrimed and miserable plight. All these troubles are owing to our having lost the trail yesterday, and we have been travelling to-day as nearly in the proper course as our compass indicated, and hope soon to find it.

12th.—Our scouts came in this morning with the intelligence that they had found a large trail of white men, bearing N. W. We have no doubt that this is Wm. Sublette's party, and that it passed us last evening.<sup>22</sup> They must have travelled very rapidly to overtake us so soon, and no doubt had men ahead watching our motions. It seems rather unfriendly, perhaps, to run by us in this furtive way, without even stopping to say good morning, but Sublette is attached to a rival company, and all stratagems are deemed allowable when interest is concerned. It is a matter of some moment to be the first at the mountain rendezvous, [37] in order to obtain the furs brought every summer by the trappers.

Last night, while I was serving on guard, I observed an unusual commotion among our band of horses, a wild neighing, snorting, and plunging, for which I was unable to account. I directed several of my men to go in and appease them, and endeavor to ascertain the cause. They had scarcely started, however, when about half of the band broke their fastenings, snapped the hobbles on their legs, and

---

<sup>22</sup> For biographical sketch of William Sublette, see our volume xix, p. 221, note 55 (Gregg). His haste to reach the rendezvous in the mountains before the arrival of Wyeth's party, was connected with the arrangements for supplies; see preface to the present volume.—ED.

went dashing right through the midst of the camp. Down went several of the tents, the rampart of goods was cleared in gallant style, and away went the frightened animals at full speed over the plain. The whole camp was instantly aroused. The horses that remained, were bridled as quickly as possible; we mounted them without saddles, and set off in hard pursuit after the fugitives. The night was pitch dark, but we needed no light to point out the way, as the clattering of hoofs ahead on the hard ground of the prairie, sounded like thunder. After riding half an hour, we overtook about forty of them, and surrounding them with difficulty, succeeded in driving them back, and securing them as before. Twenty men were then immediately despatched to scour the country, and bring in the remainder. This party was headed by Mr. Lee, our missionary, (who, with his usual promptitude, volunteered his services,) and they returned early this morning, bringing nearly sixty more. We find, however, upon counting the horses in our possession, that there are yet three missing.

While we were at breakfast, three Indians of the Otto tribe, came to our camp to see, and smoke with us.<sup>23</sup> These were men of rather short stature, but strong and firmly built. Their countenances resemble in general expression those of the Kansas, and their dresses are very similar. We are all of opinion, that it is to these Indians we owe our difficulties of last night, and we have no doubt that the three missing horses are now in their [38] possession, but as we cannot prove it upon them, and cannot even converse with them, (having no interpreters,) we are compelled to submit to our loss in silence. Perhaps we should even be thankful that we have not lost more.

While these people were smoking the pipe of peace with us, after breakfast, I observed that Richardson, our chief hunter,

<sup>23</sup> For the Oto, see Bradbury's *Travels*, in our volume v, p. 74, note 42.—ED.

(an experienced man in this country, of a tall and iron frame, and almost child-like simplicity of character, in fact an exact counterpart of *Hawk-eye* in his younger days,) stood aloof, and refused to sit in the circle, in which it was always the custom of the *old hands* to join.

Feeling some curiosity to ascertain the cause of this unusual diffidence, I occasionally allowed my eyes to wander to the spot where our sturdy hunter stood looking moodily upon us, as the calumet passed from hand to hand around the circle, and I thought I perceived him now and then cast a furtive glance at one of the Indians who sat opposite to me, and sometimes his countenance would assume an expression almost demoniacal, as though the most fierce and deadly passions were raging in his bosom. I felt certain that hereby hung a tale, and I watched for a corresponding expression, or at least a look of consciousness, in the face of my opposite neighbor, but expression there was none. His large features were settled in a tranquillity which nothing could disturb, and as he puffed the smoke in huge volumes from his mouth, and the fragrant vapor wreathed and curled around his head, he seemed the embodied spirit of meekness and taciturnity.

The camp moved soon after, and I lost no time in overhauling Richardson, and asking an explanation of his singular conduct.

“Why,” said he, “that *Injen* that sat opposite to you, is my bitterest enemy. I was once going down alone from the rendezvous with letters for St. Louis, and when I arrived on the lower [39] part of the Platte river, (just a short distance beyond us here,) I fell in with about a dozen Ottos. They were known to be a friendly tribe, and I therefore felt no fear of them. I dismounted from my horse and sat with them upon the ground. It was in the depth of winter; the ground was covered with snow, and the river was frozen solid. While I was thinking of nothing but my dinner, which I was then

about preparing, four or five of the cowards jumped on me, mastered my rifle, and held my arms fast, while they took from me my knife and tomahawk, my flint and steel, and all my ammunition. They then loosed me, and told me to be off. I begged them, for the love of God, to give me my rifle and a few loads of ammunition, or I should starve before I could reach the settlements. No—I should have nothing, and if I did not start off immediately, they would throw me under the ice of the river. And,” continued the excited hunter,—while he ground his teeth with bitter, and uncontrollable rage,—“that man that sat opposite to you was the chief of them. He recognised me, and knew very well the reason why I would not smoke with him. I tell you, sir, if ever I meet that man in any other situation than that in which I saw him this morning, I’ll shoot him with as little hesitation as I would shoot a deer. Several years have passed since the perpetration of this outrage, but it is still as fresh in my memory as ever, and I again declare, that if ever an opportunity offers, I will kill that man.” “But, Richardson, did they take your horse also?” “To be sure they did, and my blankets, and every thing I had, except my clothes.” “But how did you subsist until you reached the settlements? You had a long journey before you.” “Why, set to *trappin’* prairie squirrels with little nooses made out of the hairs of my head.” I should remark that his hair was so long, that it fell in heavy masses on his shoulders. “But squirrels in winter, Richardson, I never heard of squirrels in winter.” “Well but there was plenty of them, though; little white ones, that lived among the [40] snow.” “Well, really, this was an unpleasant sort of adventure enough, but let me suggest that you do very wrong to remember it with such blood-thirsty feelings.” He shook his head with a dogged and determined air, and rode off as if anxious to escape a lecture.

A little sketch of our hunter may perhaps not be uninteresting, as he will figure somewhat in the following pages, being one of the principal persons of the party, the chief hunter, and a man upon whose sagacity and knowledge of the country we all in a great measure depended.

In height he is several inches over six feet, of a spare but remarkably strong and vigorous frame, and a countenance of almost infantile simplicity and openness. In disposition he is mild and affable, but when roused to indignation, his keen eyes glitter and flash, the muscles of his large mouth work convulsively, and he looks the very impersonation of the spirit of evil. He is implacable in anger, and bitter in revenge; never forgetting a kindness, but remembering an injury with equal tenacity. Such is the character of our hunter, and none who have known him as I have, will accuse me of delineating from fancy. His native place is Connecticut, which he left about twelve years ago, and has ever since been engaged in roaming through the boundless plains and rugged mountains of the west, often enduring the extremity of famine and fatigue, exposed to dangers and vicissitudes of every kind, all for the paltry, and often uncertain pittance of a Rocky Mountain hunter. He says he is now tired of this wandering and precarious life, and when he shall be enabled to save enough from his earnings to buy a farm in Connecticut, he intends to settle down a quiet tiller of the soil, and enjoy the sweets of domestic felicity. But this day will probably never arrive. Even should he succeed in realizing a little fortune, and the farm should be taken, the monotony and tameness of the scene will weary his free spirit; he will often sigh for a habitation [41] on the broad prairie, or a ramble over the dreary mountains where his lot has so long been cast.

15th.— We saw to-day several large white wolves, and two herds of antelopes. The latter is one of the most beautiful

animals I ever saw. When full grown, it is nearly as large as a deer. The horns are rather short, with a single prong near the top, and an abrupt backward curve at the summit like a hook. The ears are very delicate, almost as thin as paper, and hooked at the tip like the horns. The legs are remarkably light and beautifully formed, and as it bounds over the plain, it seems scarcely to touch the ground, so exceedingly light and agile are its motions. This animal is the *Antelope furcifer* of zoologists, and inhabits the western prairies of North America exclusively. The ground here is strewn with great quantities of buffalo bones; the skulls of many of them in great perfection. I often thought of my friend Doctor M. and his *golgotha*, while we were kicking these fine specimens about the ground. We are now travelling along the banks of the Blue river,—a small fork of the Kansas. The grass is very luxuriant and good, and we have excellent and beautiful camps every night.

This morning a man was sent ahead to see W. Sublette's camp, and bear a message to him, who returned in the evening with the information that the company is only one day's journey beyond, and consists of about thirty-five men. We see his deserted camps every day, and, in some cases, the fires are not yet extinguished. It is sometimes amusing to see the wolves lurking like guilty things around these camps seeking for the fragments that may be left; as our party approaches, they sneak away with a mean, hang-dog air which often coaxes a whistling bullet out of the rifle of the wayfarer.

## [42] CHAPTER III

Arrival at the Platte river — Wolves and antelopes — Saline efflorescences — Anxiety of the men to see buffalo — Visit of two spies from the Grand Pawnees — Forced march — A herd of buffalo — Elk — Singular conduct of the horses — Killing a buffalo — Indian mode of procuring buffalo — Great herd — Intention of the men to desert — Adventure with an Indian in the tent — Circumspection necessary — Indian feat with bow and arrow — Notice of the Pawnee tribes — Disappearance of the buffalo from the plains of the Platte — A hunting adventure — Killing a buffalo — Butchering of a bull — Shameful destruction of the game — Hunters' mode of quenching thirst.

ON the 18th of May we arrived at the Platte river. It is from one and a half to two miles in width, very shoal; large sand flats, and small, verdant islands appearing in every part. Wolves and antelopes were in great abundance here, and the latter were frequently killed by our men. We saw, also, the sandhill crane, great heron, (*Ardea heroidas*,) and the long-billed curlew, stalking about through the shallow water, and searching for their aquatic food.

The prairie is here as level as a race course, not the slightest undulation appearing throughout the whole extent of vision, in a north and westerly direction; but to the eastward of the river, and about eight miles from it, is seen a range of high bluffs or sand banks, stretching away to the south-east until they are lost in the far distance.

The ground here is in many places encrusted with an impure salt, which by the taste appears to be a combination of the sulphate and muriate of soda; there are also a number of little pools, of only a few inches in depth, scattered over the plain, the water of which is so bitter and pungent, that it seems to penetrate [43] into the tongue, and almost to produce decortication of the mouth.

We are now within about three days' journey of the usual

haunts of the buffalo, and our men (particularly the uninitiated) look forward to our arrival amongst them with considerable anxiety. They have listened to the garrulous hunter's details of "*approaching*," and "*running*," and "*quartering*," until they fancy themselves the very actors in the scenes related, and are fretting and fuming with impatience to draw their maiden triggers upon the unoffending rangers of the plain.

The next morning, we perceived two men on horseback, at a great distance; and upon looking at them with our telescope, discovered them to be Indians, and that they were approaching us. When they arrived within three or four hundred yards, they halted, and appeared to wish to communicate with us, but feared to approach too nearly. Captain W. rode out alone and joined them, while the party proceeded slowly on its way. In about fifteen minutes he returned with the information that they were of the tribe called Grand Pawnees.<sup>24</sup> They told him that a war party of their people, consisting of fifteen hundred warriors, was encamped about thirty miles below; and the captain inferred that these men had been sent to watch our motions, and ascertain our place of encampment; he was therefore careful to impress upon them that we intended to go but a few miles further, and pitch our tents upon a little stream near the main river. When we were satisfied that the messengers were out of sight of us, on their return to their camp, our whole caravan was urged into a brisk trot, and we determined to steal a march upon our neighbors. The little stream was soon passed, and we went on, and on, without slackening our pace, until 12 o'clock at night. We then called a halt on the bank of the river, made a hasty meal, threw ourselves down in our blankets, without pitching the tents, and slept soundly for

---

<sup>24</sup> On the different branches of Pawnee, see James's *Long's Expedition*, in our volume xiv, p. 233, note 179.—ED.

three hours. We were [44] then aroused, and off we went again, travelling steadily the whole day, making about thirty-five miles, and so got quite clear of the Grand Pawnees.

The antelopes are very numerous here. There is not half an hour during the day in which they are not seen, and they frequently permit the party to approach very near them. This afternoon, two beautiful does came bounding after us, bleating precisely like sheep. The men imitated the call, and they came up to within fifty yards of us, and stood still; two of the hunters fired, and both the poor creatures fell dead. We can now procure as many of these animals as we wish, but their flesh is not equal to common venison, and is frequently rejected by our people. A number are, however, slaughtered every day, from mere wantonness and love of killing, the greenhorns glorying in the sport, like our strip-lings of the city, in their annual murdering of robins and sparrows.

20th.—This afternoon, we came in sight of a large *gang* of the long-coveted buffalo. They were grazing on the opposite side of the Platte, quietly as domestic cattle, but as we neared them, the foremost *winded* us, and started back, and the whole herd followed in the wildest confusion, and were soon out of sight. There must have been many thousands of them. Towards evening, a large band of elk came towards us at full gallop, and passed very near the party. The appearance of these animals produced a singular effect upon our horses, all of which became restive, and about half the loose ones broke away, and scoured over the plain in full chase after the elk. Captain W. and several of his men went immediately in pursuit of them, and returned late at night, bringing the greater number. Two have, however, been lost irrecoverably. Our observed latitude, yesterday, was  $40^{\circ} 31'$ , and our computed distance from the Missouri settlements, about 360 miles.

[45] The day following, we saw several small herds of buffalo on our side of the river. Two of our hunters started out after a huge bull that had separated himself from his companions, and gave him chase on fleet horses.

Away went the buffalo, and away went the men, hard as they could dash; now the hunters gained upon him, and pressed him hard; again the enormous creature had the advantage, plunging with all his might, his terrific horns often ploughing up the earth as he spurned it under him. Sometimes he would double, and rush so near the horses as almost to gore them with his horns, and in an instant would be off in a tangent, and throw his pursuers from the track. At length the poor animal came to bay, and made some unequivocal demonstrations of combat; raising and tossing his head furiously, and tearing up the ground with his feet. At this moment a shot was fired. The victim trembled like an aspen, and fell to his knees, but recovering himself in an instant, started again as fast as before. Again the determined hunters dashed after him, but the poor bull was nearly exhausted, he proceeded but a short distance and stopped again. The hunters approached, rode slowly by him, and shot two balls through his body with the most perfect coolness and precision. During the race,— the whole of which occurred in full view of the party,— the men seemed wild with the excitement which it occasioned; and when the animal fell, a shout rent the air, which startled the antelopes by dozens from the bluffs, and sent the wolves howling like demons from their lairs.

This is the most common mode of killing the buffalo, and is practised very generally by the travelling hunters; many are also destroyed by approaching them on foot, when, if the bushes are sufficiently dense, or the grass high enough to afford concealment, the hunter,— by keeping carefully to leeward of his game,— may sometimes approach so near as

almost to touch [46] the animal. If on a plain, without grass or bushes, it is necessary to be very circumspect; to approach so slowly as not to excite alarm, and, when observed by the animal, to imitate dexterously, the clumsy motions of a young bear, or assume the sneaking, prowling attitude of a wolf, in order to lull suspicion.

The Indians resort to another stratagem, which is, perhaps, even more successful. The skin of a calf is properly dressed, with the head and legs left attached to it. The Indian envelopes himself in this, and with his short bow and a brace of arrows, ambles off into the very midst of a herd. When he has selected such an animal as suits his fancy, he comes close alongside of it, and without noise, passes an arrow through its heart. One arrow is always sufficient, and it is generally delivered with such force, that at least half the shaft appears through the opposite side. The creature totters, and is about to fall, when the Indian glides around, and draws the arrow from the wound lest it should be broken. A single Indian is said to kill a great number of buffaloes in this way, before any alarm is communicated to the herd.

Towards evening, on rising a hill, we were suddenly greeted by a sight which seemed to astonish even the oldest amongst us. The whole plain, as far as the eye could discern, was covered by one enormous mass of buffalo. Our vision, at the very least computation, would certainly extend ten miles, and in the whole of this great space, including about eight miles in width from the bluffs to the river bank, there was apparently no vista in the incalculable multitude. It was truly a sight that would have excited even the dullest mind to enthusiasm. Our party rode up to within a few hundred yards of the edge of the herd, before any alarm was communicated; then the bulls,—which are always stationed around as sentinels,—began pawing the ground, and [47] throwing the earth over their heads; in a few moments they

started in a slow, clumsy canter; but as we neared them, they quickened their pace to an astonishingly rapid gallop, and in a few minutes were entirely beyond the reach of our guns, but were still so near that their enormous horns, and long shaggy beards, were very distinctly seen. Shortly after we encamped, our hunters brought in the choice parts of five that they had killed.

For the space of several days past, we have observed an inclination in five or six of our men to leave our service. Immediately as we encamp, we see them draw together in some secluded spot, and engage in close and earnest conversation. This has occurred several times, and as we are determined, if possible, to keep our horses, &c., for our own use, we have stationed a sentry near their tent, whose orders are peremptory to stop them at any hazard in case of an attempt on their part, to appropriate our horses. The men we are willing to lose, as they are of very little service, and we can do without them; but horses here are valuable, and we cannot afford to part with them without a sufficient compensation.

22*d.*—On walking into our tent last night at eleven o'clock, after the expiration of the first watch, (in which I had served as supernumerary, to prevent the desertion of the men,) and stooping to lay my gun in its usual situation near the head of my pallet, I was startled by seeing a pair of eyes, wild and bright as those of a tiger, gleaming from a dark corner of the lodge, and evidently directed upon me. My first impression, was that a wolf had been lurking around the camp, and had entered the tent in the prospect of finding meat. My gun was at my shoulder instinctively, my aim was directed between the eyes, and my finger pressed the trigger. At that moment a tall Indian sprang before me with a loud *wah!* seized the gun, and elevated the muzzle above my head; in another instant,

a second Indian was by my side, and I saw his keen knife glitter as it left the [48] scabbard. I had not time for thought, and was struggling with all my might with the first savage for the recovery of my weapon, when Captain W., and the other inmates of the tent were aroused, and the whole matter was explained, and set at rest in a moment. The Indians were chiefs of the tribe of Pawnee Loups,<sup>25</sup> who had come with their young men to shoot buffalo: they had paid an evening visit to the captain, and as an act of courtesy had been invited to sleep in the tent. I had not known of their arrival, nor did I even suspect that Indians were in our neighborhood, so could not control the alarm which their sudden appearance occasioned me.

As I laid myself down, and drew my blanket around me, Captain W. touched me lightly with his finger, and pointed significantly to his own person, which I perceived,— by the fire light at the mouth of the tent,— to be garnished with his knife and pistols; I observed also that the muzzle of his rifle laid across his breast, and that the breech was firmly grasped by one of his legs. I took the hint; tightened my belt, drew my gun closely to my side, and composed myself to sleep. But the excitement of the scene through which I had just passed, effectually banished repose. I frequently directed my eyes towards the dark corner, and in the midst of the shapeless mass which occupied it, I could occasionally see the glittering orbs of our guest shining amidst the surrounding obscurity. At length fatigue conquered watchfulness, and I sank to sleep, dreaming of Indians, guns, daggers, and buffalo.

Upon rising the next morning, all had left the tent: the men were busied in cooking their morning meal; kettles were hanging upon the rude cranes, great ribs of meat were roast-

---

<sup>25</sup> For the Pawnee Loup (Wolf) Indians, consult Bradbury's *Travels*, in our volume v, p. 78, note 44.— ED.

ing before the fires, and loading the air with fragrance, and my dreams and midnight reveries, and apprehensions of evil, fled upon the wings of the bright morning, and nought remained but a feeling of surprise that the untoward events of the night should have disturbed my equanimity.

[49] While these thoughts were passing in my mind, my eye suddenly encountered the two Indians. They were squatting upon the ground near one of the fires, and appeared to be surveying, with the keenness of morning appetite, the fine "*hump ribs*" which were roasting before them. The moment they perceived me, I received from them a quick glance of recognition: the taller one,—my opponent of the previous night,—rose to his feet, walked towards me, and gave me his hand with great cordiality; then pointed into the tent, made the motions of raising a gun to his shoulder, taking aim, and in short repeated the entire pantomime with great fidelity, and no little humor, laughing the whole time as though he thought it a capital joke. Poor fellow! it was near proving a dear joke for him, and I almost trembled as I recollected the eager haste with which I sought to take the life of a fellow creature. The Indian evidently felt no ill will towards me, and as a proof of it, proposed an exchange of knives, to which I willingly acceded. He deposited mine,—which had my name engraved upon the handle,—in the sheath at his side, and walked away to his *hump ribs* with the air of a man who is conscious of having done a good action. As he left me, one of our old trappers took occasion to say, that in consequence of this little act of savage courtesy, the Indian became my firm friend; and that if I ever met him again, I should be entitled to share his hospitality, or claim his protection.

While the men were packing the horses, after breakfast, I was again engaged with my Indian friend. I took his bow and arrows in my hand, and remarked that the latter were

smear'd with blood throughout: upon my expressing surprise at this he told me, by signs, that they had passed through the body of the buffalo. I assumed a look of incredulity; the countenance of the savage brightened, and his peculiar and strange eyes actually flashed with eagerness, as he pointed to a dead antelope lying upon the ground about forty feet from us, and which one of [50] the guard had shot near the camp in the morning. The animal lay upon its side with the breast towards us: the bow was drawn slightly, without any apparent effort, and the arrow flew through the body of the antelope, and skimmed to a great distance over the plain.

These Indians were the finest looking of any I have seen. Their persons were tall, straight, and finely formed; their noses slightly aquiline, and the whole countenance expressive of high and daring intrepidity. The face of the taller one was particularly admirable; and Gall or Spurzheim, at a single glance at his magnificent head, would have invested him with all the noblest qualities of the species.<sup>26</sup> I know not what a physiognomist would have said of his eyes, but they were certainly the most wonderful eyes I ever looked into; glittering and scintillating constantly, like the mirror-glasses in a lamp frame, and rolling and dancing in their orbits as though possessed of abstract volition.

The tribe to which these Indians belong, is a division of the great Pawnee nation. There are four of these divisions or tribes, known by the names of Grand Pawnees, Pawnee Loups, Pawnee Republicans, and Pawnee Picts. They are all independent of each other, governed exclusively by chiefs chosen from among their own people, and although they have always been on terms of intimacy and friendship, never

<sup>26</sup> Noted German phrenologists. Franz Joseph Gall (1758-1828) was founder of the school of phrenology; his chief work was *Anatomie et Physiologie du système nerveux* (1810-20). Kasper Spurzheim (1776-1832) was a disciple of Gall's, publishing *Physiognomical System of Drs. Gall and Spurzheim* (1815). He died in Boston.—ED.

intermarry, nor have other intercourse than that of trade, or a conjunction of their forces to attack the common enemy. In their dealings with the whites, they are arbitrary and overbearing, chaffering about the price of a horse, or a beaver skin, with true huckster-like eagerness and mendacity, and seizing with avidity every unfair advantage, which circumstances or their own craft may put in their power.

The buffalo still continue immensely numerous in every direction around, and our men kill great numbers, so that we are in truth living upon the fat of the land, and better feeding need [51] no man wish. The savory buffalo hump has suffered no depreciation since the "man without a cross" vaunted of its good qualities to "the stranger;" and in this, as in many other particulars, we have realized the truth and fidelity of Cooper's admirable descriptions.

23d.—When we rose this morning, not a single buffalo, of the many thousands that yesterday strewed the plain, was to be seen. It seemed like magic. Where could they have gone? I asked myself this question again and again, but in vain. At length I applied to Richardson, who stated that they had gone to the bluffs, but for what reason he could not tell; he, however, had observed their tracks bearing towards the bluffs, and was certain that they would be found there. He and Sandsbury (another hunter) were then about starting on a hunt to supply the camp, and I concluded to accompany them; Mr. Lee, the missionary, also joined us, and we all rode off together. The party got under way about the same time, and proceeded along the bank of the river, while we struck off south to look for the buffalo. About one hour's brisk trotting carried us to the bluffs, and we entered amongst large conical hills of yellow clay, intermixed with strata of limestone, but without the slightest vegetation of any kind. On the plains which we had left, the grass was in great luxuriance, but here not a blade of it was to be seen, and yet,

as Richardson had predicted, here were the buffalo. We had not ridden a mile before we entered upon a plain of sand of great extent, and observed ahead vast clouds of dust rising and circling in the air as though a tornado or a whirlwind were sweeping over the earth. "Ha!" said Richardson, "there they are; now let us take the wind of them, and you shall see some sport." We accordingly went around to leeward, and, upon approaching nearer, saw the huge animals rolling over and over in the sand with astonishing agility enveloping themselves by the exercise in a perfect atmosphere of dust; occasionally two of the bulls would [52] spring from the ground and attack each other with amazing address and fury, retreating for ten or twelve feet, and then rushing suddenly forward, and dashing their enormous fronts together with a shock that seemed annihilating. In these rencontres, one of the combatants was often thrown back upon his haunches, and tumbled sprawling upon the ground; in which case, the victor, with true prize-fighting generosity, refrained from persecuting his fallen adversary, contenting himself with a hearty resumption of his rolling fit, and kicking up the dust with more than his former vigor, as if to celebrate his victory.

This appeared to be a good situation to approach and kill the buffalo, as, by reason of the plentiful distribution of the little clay hills, an opportunity would be afforded of successful concealment; we separated, therefore, each taking his own course. In a very few minutes I heard the crack of a rifle in the direction in which Richardson had gone, and immediately after saw the frightened animals flying from the spot. The sound reverberated among the hills, and as it died away the herd halted to watch and listen for its repetition. For myself, I strolled on for nearly an hour, leading my horse, and peering over every hill, in the hope of finding a buffalo within range, but not one could I see that was

sufficiently near; and when I attempted the stealthy approach which I had seen Richardson practise with so much success, I felt compelled to acknowledge my utter insufficiency. I had determined to kill a buffalo, and as I had seen it several times done with so much apparent ease, I considered it a mere moonshine matter, and thought I could compass it without difficulty; but now I had attempted it, and was grievously mistaken in my estimate of the required skill. I had several times heard the guns of the hunters, and felt satisfied that we should not go to camp without meat, and was on the point of altering my course to join them, when, as I wound around the base of a little hill, I saw about twenty buffalo lying quietly on the ground within [53] thirty yards of me. Now was my time. I took my picket from my saddle, and fastened my horse to the ground as quietly as possible, but with hands that almost failed to do their office, from my excessive eagerness and trembling anxiety. When this was completed, I crawled around the hill again, almost suspending my breath from fear of alarming my intended victims, until I came again in full view of the unsuspecting herd. There were so many fine animals that I was at a loss which to select; those nearest me appeared small and poor, and I therefore settled my aim upon a huge bull on the outside. Just then I was attacked with the "*bull fever*" so dreadfully, that for several minutes I could not shoot. At length, however, I became firm and steady, and pulled my trigger at exactly the right instant. Up sprang the herd like lightning, and away they scoured, and my bull with them. I was vexed, angry, and discontented; I concluded that I could never kill a buffalo, and was about to mount my horse and ride off in despair, when I observed that one of the animals had stopped in the midst of his career. I rode towards him, and sure enough, there was my great bull trembling and swaying from side to side, and the clotted

gore hanging like icicles from his nostrils. In a few minutes after, he fell heavily upon his side, and I dismounted and surveyed the unwieldy brute, as he panted and struggled in the death agony.

When the first ebullition of my triumph had subsided, I perceived that my prize was so excessively lean as to be worth nothing, and while I was exerting my whole strength in a vain endeavor to raise the head from the ground for the purpose of removing the tongue, the two hunters joined me, and laughed heartily at my achievement. Like all inexperienced hunters, I had been particular to select the largest bull in the gang, supposing it to be the best, (and it proved, as usual, the poorest,) while more than a dozen fat cows were nearer me, either of which I might have killed with as little trouble.

[54] As I had supposed, my companions had killed several animals, but they had taken the meat of only one, and we had, therefore, to be diligent, or the camp might suffer for provisions. It was now past mid-day; the weather was very warm, and the atmosphere was charged with minute particles of sand, which produced a dryness and stiffness of the mouth and tongue, that was exceedingly painful and distressing. Water was now the desideratum, but where was it to be found? The arid country in which we then were, produced none, and the Platte was twelve or fourteen miles from us, and no buffalo in that direction, so that we could not afford time for so trifling a matter. I found that Mr. Lee was suffering as much as myself, although he had not spoken of it, and I perceived that Richardson was masticating a leaden bullet, to excite the salivary glands. Soon afterwards, a bull was killed, and we all assembled around the carcass to assist in the manipulations. The animal was first raised from his side where he had lain, and supported upon his knees, with his hoofs turned under him; a longitudinal incision

ion was then made from the nape, or anterior base of the hump, and continued backward to the loins, and a large portion of the skin from each side removed; these pieces of skin were placed upon the ground, with the under surface uppermost, and the *fleeces*, or masses of meat, taken from along the back, were laid upon them. These fleeces, from a large animal, will weigh, perhaps, a hundred pounds each, and comprise the whole of the hump on each side of the vertical processes, (commonly called the *hump ribs*,) which are attached to the vertebra. The fleeces are considered the choice parts of the buffalo, and here, where the game is so abundant, nothing else is taken, if we except the tongue, and an occasional marrow bone.

This, it must be confessed, appears like a useless and unwarrantable waste of the goods of Providence; but when are men economical, unless compelled to be so by necessity? Here are [55] more than a thousand pounds of delicious and savory flesh, which would delight the eyes and gladden the heart of any epicure in Christendom, left neglected where it fell, to feed the ravenous maw of the wild prairie wolf, and minister to the excesses of the unclean birds of the wilderness. But I have seen worse waste and havoc than this, and I feel my indignation rise at the recollection. I have seen dozens of buffalo slaughtered merely for the tongues, or for practice with the rifle; and I have also lived to see the very perpetrators of these deeds, lean and lank with famine, when the meanest and most worthless parts of the poor animals they had so inhumanly slaughtered, would have been received and eaten with humble thankfulness.

But to return to ourselves. We were all suffering from excessive thirst, and so intolerable had it at length become, that Mr. Lee and myself proposed a gallop over to the Platte river, in order to appease it; but Richardson advised us not to go, as he had just thought of a means of relieving us, which

he immediately proceeded to put in practice. He tumbled our mangled buffalo over upon his side, and with his knife opened the body, so as to expose to view the great stomach, and still crawling and twisting entrails. The good missionary and myself stood gaping with astonishment, and no little loathing, as we saw our hunter plunge his knife into the distended paunch, from which gushed the green and gelatinous juices, and then insinuate his tin pan into the opening, and by depressing its edge, strain off the water which was mingled with its contents.

Richardson always valued himself upon his politeness, and the cup was therefore first offered to Mr. Lee and myself, but it is almost needless to say that we declined the proffer, and our features probably expressed the strong disgust which we felt, for our companion laughed heartily before he applied the cup to his own mouth. He then drank it to the dregs, smacking his lips, and drawing a long breath after it, with the satisfaction of a man [56] taking his wine after dinner. Sansbury, the other hunter, was not slow in following the example set before him, and we, the audience, turned our backs upon the actors.

Before we left the spot, however, Richardson induced me to taste the blood which was still fluid in the heart, and immediately as it touched my lips, my burning thirst, aggravated by hunger, (for I had eaten nothing that day,) got the better of my abhorrence; I plunged my head into the reeking ventricles, and drank until forced to stop for breath. I felt somewhat ashamed of assimilating myself so nearly to the brutes, and turned my ensanguined countenance towards the missionary who stood by, but I saw no approval there: the good man was evidently attempting to control his risibility, and so I smiled to put him in countenance; the roar could no longer be restrained, and the missionary laughed until the tears rolled down his cheeks. I did not think, until

afterwards, of the horrible ghastliness which must have characterized my smile at that particular moment.

When we arrived at the camp in the evening, and I enjoyed the luxury of a hearty draft of water, the effect upon my stomach was that of a powerful emetic: the blood was violently ejected without nausea, and I felt heartily glad to be rid of the disgusting encumbrance. I never drank blood from that day.

## [57] CHAPTER IV

Change in the face of the country — Unpleasant visitation — its effects — North fork of the Platte — A day's journey over the hills — Wormwood bushes, and poor pasture — Marmots — Rattlesnake and gopher — Naturalist's success and sacrifices — A sand storm — Wild horses — Killing of a doe antelope — Bluffs of the Platte — The chimney — "Zip Koon," the young antelope — Birds — Feelings and cogitations of a naturalist — Arrival at Laramie's fork — Departure of two "free trappers" on a summer "hunt" — Black Hills — Rough travelling — Red butes — Sweet-water river, and Rock Independence — Avocets — Wind river mountains — Rocky Mountain sheep — Adventure of one of the men with a grizzly bear — Rattlesnakes — Toilsome march, and arrival at Sandy river — Suffering of the horses — Anticipated delights of the rendezvous.

ON the morning of the 24th of May we forded the Platte river, or rather its south fork, along which we had been travelling during the previous week.<sup>27</sup> On the northern side, we found the country totally different in its aspect. Instead of the extensive and apparently interminable green plains, the monotony of which had become so wearisome to the eye, here was a great sandy waste, without a single green thing to vary and enliven the dreary scene. It was a change, however, and we were therefore enjoying it, and remarking to each other how particularly agreeable it was, when we were suddenly assailed by vast swarms of most ferocious little black gnats; the whole atmosphere seemed crowded with them, and they dashed into our faces, assaulted our eyes, ears, nostrils, and mouths, as though they were determined to bar our passage through their territory. These little creatures were so exceedingly minute that, singly, they were scarcely visible; and yet their sting caused such excessive pain, that for [58] the rest of the day our men and horses were

<sup>27</sup> There were two fords to the South Platte, both of which led toward the North Platte at Ash Creek. Wyeth's party took the lower ford, eight miles above the forks.— Ed.

rendered almost frantic, the former bitterly imprecating, and the latter stamping, and kicking, and rolling in the sand, in tremendous, yet vain, efforts to rid themselves of their pertinacious little foes. It was rather amusing to see the whole company with their handkerchiefs, shirts, and coats, thrown over their heads, stemming the animated torrent, and to hear the greenhorns cursing their tormenters, the country, and themselves, for their foolhardiness in venturing on the journey. When we encamped in the evening, we built fires at the mouths of the tents, the smoke from which kept our enemies at a distance, and we passed a night of tolerable comfort, after a day of most peculiar misery.

The next morning I observed that the faces of all the men were more or less swollen, some of them very severely, and poor Captain W. was totally blind for two days afterwards.

25th.—We made a noon camp to-day on the north branch or fork of the river, and in the afternoon travelled along the bank of the stream.<sup>28</sup> In about an hour's march, we came to rocks, precipices, and cedar trees, and although we anticipated some difficulty and toil in the passage of the heights, we felt glad to exchange them for the vast and wearisome prairies we had left behind. Soon after we commenced the ascent, we struck into an Indian path very much worn, occasionally mounting over rugged masses of rock, and leaping wide fissures in the soil, and sometimes picking our way over the jutting crags, directly above the river. On the top of one of the stunted and broad spreading cedars, a bald eagle had built its enormous nest; and as we descended the mountain, we saw the callow young lying within it, while the anxious parents hovered over our heads, screaming their alarm.

In the evening we arrived upon the plain again; it was thickly covered with ragged and gnarled bushes of a species of wormwood, (*Artemesia*,) which perfumed the air, and at

<sup>28</sup> See note 32 (Wyeth), *ante*, p. 52.—ED.

first was [59] rather agreeable. The soil was poor and sandy, and the straggling blades of grass which found their way to the surface were brown and withered. Here was a poor prospect for our horses; a sad contrast indeed to the rich and luxuriant prairies we had left. On the edges of the little streams, however, we found some tolerable pasture, and we frequently stopped during the day to bait our poor animals in these pleasant places.

We observed here several species of small marmots, (*Arctomys*,) which burrowed in the sand, and were constantly skipping about the ground in front of our party. The short rattlesnake of the prairies was also abundant, and no doubt derived its chief subsistence from foraging among its playful little neighbors. Shortly before we halted this evening, being a considerable distance in advance of the caravan, I observed a dead gopher, (*Diplostoma*,) — a small animal about the size of a rat, with large external cheek pouches, — lying upon the ground; and near it a full grown rattlesnake, also dead. The gopher was yet warm and pliant, and had evidently been killed but a few minutes previously; the snake also gave evidence of very recent death, by a muscular twitching of the tail, which occurs in most serpents, soon after life is extinct. It was a matter of interest to me to ascertain the mode by which these animals were deprived of life. I therefore dismounted from my horse, and examined them carefully, but could perceive nothing to furnish even a clue. Neither of them had any external or perceptible wound. The snake had doubtless killed the quadruped, but what had killed the snake? There being no wound upon its body was sufficient proof that the gopher had not used his teeth, and in no other way could he cause death.

I was unable to solve the problem to my satisfaction, so I pocketed the animal to prepare its skin, and rode on to the camp.

The birds thus far have been very abundant. There is a considerable [60] variety, and many of them have not before been seen by naturalists. As to the plants, there seems to be no end to them, and Mr. N. is finding dozens of new species daily. In the other branches of science, our success has not been so great, partly on account of the rapidity and steadiness with which we travel, but chiefly from the difficulty, and almost impossibility, of carrying the subjects. Already we have cast away all our useless and superfluous clothing, and have been content to mortify our natural pride, to make room for our specimens. Such things as spare waistcoats, shaving boxes, soap, and stockings, have been ejected from our trunks, and we are content to dress, as we live, in a style of primitive simplicity. In fact, the whole appearance of our party is sufficiently primitive; many of the men are dressed entirely in deerskins, without a single article of civilized manufacture about them; the old trappers and hunters wear their hair flowing on their shoulders, and their large grizzled beards would scarcely disgrace a Bedouin of the desert.

The next morning the whole camp was suddenly aroused by the falling of all the tents. A tremendous blast swept as from a funnel over the sandy plain, and in an instant precipitated our frail habitations like webs of gossamer. The men crawled out from under the ruins, rubbing their eyes, and, as usual, muttering imprecations against the country and all that therein was; it was unusually early for a start, but we did not choose to pitch the tents again, and to sleep without them here was next to impossible; so we took our breakfast in the open air, devouring our well sanded provisions as quickly as possible, and immediately took to the road.

During the whole day a most terrific gale was blowing directly in our faces, clouds of sand were driving and hurtling

by us, often with such violence as nearly to stop our progress; and when we halted in the evening, we could scarcely recognise each other's faces beneath their odious mask of dust and dirt.

[61] There have been no buffalo upon the plain to-day, all the game that we have seen, being a few elk and antelopes; but these of course we did not attempt to kill, as our whole and undivided attention was required to assist our progress.

28th.—We fell in with a new species of game to-day;—a large band of wild horses. They were very shy, scarcely permitting us to approach within rifle distance, and yet they kept within sight of us for some hours. Several of us gave them chase, in the hope of at least being able to approach sufficiently near to examine them closely, but we might as well have pursued the wind; they scoured away from us with astonishing velocity, their long manes and tails standing out almost horizontally, as they sprang along before us. Occasionally they would pause in their career, turn and look at us as we approached them, and then, with a neigh that rang loud and high above the clattering of the hoofs, dart their light heels into the air, and fly from us as before. We soon abandoned this wild chase, and contented ourselves with admiring their sleek beauty at a distance.

In the afternoon, I committed an act of cruelty and wantonness, which distressed and troubled me beyond measure, and which I have ever since recollected with sorrow and compunction. A beautiful doe antelope came running and bleating after us, as though she wished to overtake the party; she continued following us for nearly an hour, at times approaching within thirty of forty yards. and standing to gaze at us as we moved slowly on our way. I several times raised my gun to fire at her, but my better nature as often gained the ascendancy, and I at last rode into the midst of the party to escape the temptation. Still the doe followed us, and I

finally fell into the rear, but without intending it, and again looked at her as she trotted behind us. At that moment, my evil genius and love of sport triumphed; I slid down from my horse, aimed at the poor antelope, and shot a ball through her side. Under other circumstances, [62] there would have been no cruelty in this; but here, where better meat was so abundant, and the camp was so plentifully supplied, it was unfeeling, heartless murder. It was under the influence of this too late impression, that I approached my poor victim. She was writhing in agony upon the ground, and exerting herself in vain efforts to draw her mangled body farther from her destroyer; and as I stood over her, and saw her cast her large, soft, black eyes upon me with an expression of the most touching sadness, while the great tears rolled over her face, I felt myself the meanest and most abhorrent thing in creation. But now a finishing blow would be mercy to her, and I threw my arm around her neck, averted my face, and drove my long knife through her bosom to the heart. I did not trust myself to look upon her afterwards, but mounted my horse, and galloped off to the party, with feelings such as I hope never to experience again. For several days the poor antelope haunted me, and I shall never forget its last look of pain and upbraiding.

The bluffs on the southern shore of the Platte, are, at this point, exceedingly rugged, and often quite picturesque; the formation appears to be simple clay, intermixed, occasionally, with a stratum of limestone, and one part of the bluff bears a striking and almost startling resemblance to a dilapidated feudal castle. There is also a kind of obelisk, standing at a considerable distance from the bluffs, on a wide plain, towering to the height of about two hundred feet, and tapering to a small point at the top. This pillar is known to the hunters and trappers who traverse these regions, by the name of the "*chimney*." Here we diverged from the usual

course, leaving the bank of the river, and entered a large and deep ravine between the enormous bluffs.<sup>29</sup>

[63] The road was very uneven and difficult, winding from amongst innumerable mounds six to eight feet in height, the space between them frequently so narrow as scarcely to admit our horses, and some of the men rode for upwards of a mile kneeling upon their saddles. These mounds were of hard yellow clay, without a particle of rock of any kind, and along their bases, and in the narrow passages, flowers of every hue were growing. It was a most enchanting sight; even the men noticed it, and more than one of our matter-of-fact people exclaimed, *beautiful, beautiful!* Mr. N. was here in his glory. He rode on ahead of the company, and cleared the passages with a trembling and eager hand, looking anxiously back at the approaching party, as though he feared it would come ere he had finished, and tread his lovely prizes under foot.

The distance through the ravine is about three miles. We then crossed several beautiful grassy knolls, and descending to the plain, struck the Platte again, and travelled along its bank. Here one of our men caught a young antelope, which he brought to the camp upon his saddle. It was a beautiful and most delicate little creature, and in a few days became so tame as to remain with the camp without being tied, and to drink, from a tin cup, the milk which our good missionaries spared from their own scanty meals. The men christened it "*Zip Coon*," and it soon became familiar with its name, running to them when called, and exhibiting many evidences of affection and attachment. It became a

---

<sup>29</sup> These are called "Scott's Bluffs;" so named from an unfortunate trader, who perished here from disease and hunger, many years ago. He was deserted by his companions; and the year following, his crumbling bones were found in this spot.—TOWNSEND.

*Comment by Ed.* See this story in detail in Irving, *Rocky Mountains*, i, pp. 45, 46.

great favorite with every one. A little pannier of willows was made for it, which was packed on the back of a mule, and when the camp moved in the mornings, little *Zip* ran to his station beside his long-eared hack, bleating with impatience until some one came to assist him in mounting.

On the afternoon of the 31st, we came to green trees and bushes again, and the sight of them was more cheering than can [64] be conceived, except by persons who have travelled for weeks without beholding a green thing, save the grass under their feet. We encamped in the evening in a beautiful grove of cottonwood trees, along the edge of which ran the Platte, dotted as usual with numerous islands.

In the morning, Mr. N. and myself were up before the dawn, strolling through the umbrageous forest, inhaling the fresh, bracing air, and making the echoes ring with the report of our gun, as the lovely tenants of the grove flew by dozens before us. I think I never before saw so great a variety of birds within the same space. All were beautiful, and many of them quite new to me; and after we had spent an hour amongst them, and my game bag was teeming with its precious freight, I was still loath to leave the place, lest I should not have procured specimens of the whole.

None but a naturalist can appreciate a naturalist's feelings — his delight amounting to ecstasy — when a specimen such as he has never before seen, meets his eye, and the sorrow and grief which he feels when he is compelled to tear himself from a spot abounding with all that he has anxiously and unremittingly sought for.

This was peculiarly my case upon this occasion. We had been long travelling over a sterile and barren tract, where the lovely denizens of the forest could not exist, and I had been daily scanning the great extent of the desert, for some little *oasis* such as I had now found; here was my wish at length gratified, and yet the caravan would not halt for me; I must

turn my back upon the *El Dorado* of my fond anticipations, and hurry forward over the dreary wilderness which lay beyond.

What valuable and highly interesting accessions to science might not be made by a party, composed exclusively of naturalists, on a journey through this rich and unexplored region! The botanist, the geologist, the mammalogist, the ornithologist, and [65] the entomologist, would find a rich and almost inexhaustible field for the prosecution of their inquiries, and the result of such an expedition would be to add most materially to our knowledge of the wealth and resources of our country, to furnish us with new and important facts relative to its structure, organization, and natural productions, and to complete the fine native collections in our already extensive museums.

On the 1st of June, we arrived at Laramie's fork of the Platte, and crossed it without much difficulty.<sup>30</sup>

Here two of our "free trappers" left us for a summer "hunt" in the rugged Black Hills. These men joined our party at Independence, and have been travelling to this point with us for the benefit of our escort. Trading companies usually encourage these free trappers to join them, both for the strength which they add to the band, and that they may have the benefit of their generally good hunting qualities. Thus are both parties accommodated, and no obligation is felt on either side.

I confess I felt somewhat sad when I reflected upon the possible fate of the two adventurous men who had left us in the midst of a savage wilderness, to depend entirely upon their unassisted strength and hardihood, to procure the

---

<sup>30</sup> Wyeth relates in his journal that he found thirteen of Sublette's men building a fort at this place. Such was the origin of the famous Fort Laramie, first known as Fort William, then Fort John, and in 1846, removed a mile farther up the stream, and re-christened Fort Laramie. It became a government post in 1849.—ED.

means of subsistence and repel the aggression of the Indian.

Their expedition will be fraught with stirring scenes, with peril and with strange adventure; but they think not of this, and they care not for it. They are only two of the many scores who annually subject themselves to the same difficulties and dangers; they see their friends return unscathed, and laden with rich and valuable furs, and if one or two should have perished by Indian rapacity, or fallen victims to their own daring and fool-hardy spirit, they mourn the loss of their brethren who have not returned, and are only the more anxious to pursue the same track in order to avenge them.

On the 2d, we struck a range of high and stony mountains, [66] called the Black Hills. The general aspect here, was dreary and forbidding; the soil was intersected by deep and craggy fissures; rock juttet over rock, and precipice frowned over precipice in frightful, and apparently endless, succession. Soon after we commenced the ascent, we experienced a change in the temperature of the air; and towards mid-day, when we had arrived near the summit, our large blanket *capeaus*, — which in the morning had been discarded as uncomfortable, — were drawn tightly around us, and every man was shivering in his saddle as though he had an ague fit. The soil here is of a deep reddish or ferruginous hue, intermixed with green sand; and on the heights, pebbles of chalcedony and agate are abundant.

We crossed, in the afternoon, the last and steepest spur of this chain, winding around rough and stony precipices, and along the extreme verges of tremendous ravines, so dangerous looking that we were compelled to dismount and lead our horses.

On descending to the plain, we saw again the north fork of the Platte, and were glad of an opportunity of encamping.

Our march to-day has been an unusually wearisome one, and many of our loose horses are bruised and lame.

7th. — The country has now become more level, but the prairie is barren and inhospitable looking to the last degree. The twisted, aromatic wormwood covers and extracts the strength from the burnt and arid soil. The grass is dry and brown, and our horses are suffering extremely for want of food. Occasionally, however, a spot of lovely green appears, and here we allow our poor jaded friends to halt, and roam without their riders, and their satisfaction and pleasure is expressed by many a joyous neigh, and many a heart-felt roll upon the verdant sward.

In the afternoon, we arrived at the "Red Butes," two or three brown-red cliffs, about two thousand feet in height.<sup>31</sup> This is a remarkable point in the mountain route. One of these cliffs terminates a long, lofty, wooded ridge, which has bounded our [67] southern view for the past two days. The summits of the cliffs are covered with patches of snow, and the contrast of the dazzling white and brick-red produces a very pretty effect.

The next day, we left the Platte river, and crossed a wide, sandy desert, dry and desolate; and on the 9th, encamped at noon on the banks of the Sweet-water. Here we found a large rounded mass of granite, about fifty feet high, called Rock Independence.<sup>32</sup> Like the Red Butes, this rock is also a rather remarkable point in the route. On its smooth, perpendicular sides, we see carved the names of most of the mountain *bourgeois*,<sup>33</sup> with the dates of their arrival. We

<sup>31</sup> The trail continued along the North Platte until it reached Red Buttes, described by Townsend. They form the western end of what is known as Caspar range, in Natrona County, Wyoming.— ED.

<sup>32</sup> For Sweetwater River and Independence Rock, see notes 33, 34 (Wyeth), *ante*, p. 53.— ED.

<sup>33</sup> In fur-trade parlance the *bourgeois* was the leader or commander of an expedition or a trading post. See J. Long's *Voyages* in our volume ii, p. 75, note 35.— ED.

observed those of the two Sublette's, Captains Bonneville, Serre, Fontinelle, &c.,<sup>34</sup> and after leaving our own, and taking a hearty, but hasty lunch in the shade of a rock, and a draught from the pure and limpid stream at its base, we pursued our journey.

The river is here very narrow, often only twelve or fifteen feet wide, shallow, and winding so much, that during our march, to-day, we crossed it several times, in order to pursue a straight course. The banks of the stream are clothed with the most luxuriant pasture, and our invaluable dumb friends appear perfectly happy.

We saw here great numbers of a beautiful brown and white avocet, (the *Recurvirostra americana* of ornithologists.) These fine birds were so tame as to allow a very near approach, running slowly before our party, and scarcely taking wing at the report of a gun. They frequent the marshy plains in the neighborhood of the river, and breed here.

On the 10th, about ninety miles to the west, we had a striking view of the Wind-river mountains. They are almost wholly of a dazzling whiteness, being covered thickly with snow, and the lofty peaks seem to blend themselves with the dark clouds which hang over them.<sup>35</sup> This chain gives rise to the sources of the Missouri, the Colorado of the west,

---

<sup>34</sup> For Captain Bonneville, see Gregg's *Commerce of the Prairies*, in our volume xx, p. 267, note 167.

Michael Lamie Cerré belonged to a French family of note in the annals of the West. His grandfather, Gabriel, was an early merchant at Kaskaskia, and acquired a fortune in the fur-trade. Later he removed to St. Louis, where one of his daughters married Auguste Chouteau. Pascal Cerré, father of Michael, was also a fur-trader of note. The son had been employed in the Santa Fé trade, and was persuaded to act as Bonneville's business agent in his expeditions of 1832-35.

For Lucien Fontenelle, see our volume xiv, p. 275, note 196.—ED.

<sup>35</sup> The Wind River Mountains, in Fremont County, Wyoming, trend nearly north from South Pass to the Yellowstone. They are covered with snow during all the year, and were credited by the early explorers with being the highest chain of the Rockies. In 1843 Frémont ascended the peak named for him, which has an altitude of 13,790 feet.—ED.

and Lewis' river of the [68] Columbia, and is the highest land on the continent of North America.

We saw, to-day, a small flock of the hairy sheep of the Rocky Mountains, the big horn of the hunters, (*Ovis montana*.) We exerted ourselves in vain to shoot them. They darted from us, and hid themselves amongst the inaccessible cliffs, so that none but a chamois hunter might pretend to reach them. Richardson says that he has frequently killed them, but he admits that it is dangerous and wearisome sport; and when good beef is to be found upon the plains, men are not anxious to risk their necks for a meal of mutton.

In the afternoon, one of our men had a somewhat perilous adventure with a grizzly bear. He saw the animal crouching his huge frame in some willows which skirted the river, and approaching on horseback to within twenty yards, fired upon him. The bear was only slightly wounded by the shot, and with a fierce growl of angry malignity, rushed from his cover, and gave chase. The horse happened to be a slow one, and for the distance of half a mile, the race was hard contested; the bear frequently approaching so near the terrified animal as to snap at his heels, while the equally terrified rider, — who had lost his hat at the start, — used whip and spur with the most frantic diligence, frequently looking behind, from an influence which he could not resist, at his rugged and determined foe, and shrieking in an agony of fear, “shoot him, shoot him?” The man, who was one of the greenhorns, happened to be about a mile behind the main body, either from the indolence of his horse, or his own carelessness; but as he approached the party in his desperate flight, and his lugubrious cries reached the ears of the men in front, about a dozen of them rode to his assistance, and soon succeeded in diverting the attention of his pertinacious foe. After he had received the contents of all the guns, he fell, and was soon dispatched. The man rode in among his fellows, pale and

[69] haggard from overwrought feelings, and was probably effectually cured of a propensity for meddling with grizzly bears.

A small striped rattlesnake is abundant on these plains:— it is a different species from our common one at home, but is equally malignant and venomous. The horses are often startled by them, and dart aside with intuitive fear when their note of warning is sounded in the path.

12th. — The plains of the Sweet-water at this point,— latitude  $43^{\circ} 6'$ , longitude  $110^{\circ} 30'$ , — are covered with little salt pools, the edges of which are encrusted with alkaline efflorescences, looking like borders of snow. The rocks in the vicinity are a loose, fine-grained sandstone, the strata nearly horizontal, and no organic remains have been discovered. We have still a view of the lofty Wind-river mountains on our right hand, and they have for some days served as a guide to determine our course. On the plain, we passed several huge rhomboidal masses of rock, standing alone, and looking, at a little distance, like houses with chimneys. The freaks of nature, as they are called, have often astonished us since we have been journeying in the wilderness. We have seen, modeled without art, representations of almost all the most stupendous works of man; and how do the loftiest and most perfect creations of his wisdom and ingenuity sink into insignificance by the comparison. Noble castles, with turrets, embrasures, and loop holes, with the drawbridge in front, and the moat surrounding it: behind, the humble cottages of the subservient peasantry, and all the varied concomitants of such a scene, are so strikingly evident to the view, that it requires but little stretch of fancy to imagine that a race of antediluvian giants may here have swayed their iron sceptre, and left behind the crumbling palace and the tower, to tell of their departed glory.

On the 14th, we left the Sweet-water, and proceeded in a

south-westerly direction to Sandy river, a branch of the Colorado of the west.<sup>36</sup> We arrived here at about 9 o'clock in the evening. [70] after a hard and most toilsome march for both man and beast. We found no water on the route, and not a single blade of grass for our horses. Many of the poor animals stopped before night, and resolutely refused to proceed; and others with the remarkable sagacity, peculiar to them, left the track in defiance of those who drove and guided them, sought and found water, and spent the night in its vicinity. The band of missionaries, with their horses and horned cattle, halted by the way, and only about half the men of the party accompanied us to our encampment on Sandy. We were thus scattered along the route for several miles; and if a predatory band of Indians had then found us, we should have fallen an easy prey.

The next morning by about 10 o'clock all our men and horses had joined us, and, in spite of the fatigues of the previous day, we were all tolerably refreshed, and in good spirits. Towards noon we got under way, and proceeded seven or eight miles down the river to a spot where we found a little poor pasture for our horses. Here we remained until the next morning, to recruit. I found here a beautiful new species of mocking bird,<sup>37</sup> which I shot and prepared. Birds are, however, generally scarce, and there is here very little of interest in any department of natural history. We are also beginning to suffer somewhat for food: buffalo are rarely seen, the antelopes are unusually shy, and the life of our little favorite, "Zip," has been several times menaced. I be-

---

<sup>36</sup> Sandy River is a northern affluent of the Green, rising just beyond South Pass and flowing southwest into the main stream, through Fremont and Sweet-water counties, Wyoming. The Little Sandy was the first stream beyond the divide, but eight miles from the pass. The trail followed the Big Sandy almost its entire length.—ED.

<sup>37</sup> This is the mountain mocking bird, (*Orpheus montanus*), described in the Appendix [not included in our reprint].—TOWNSEND.

lieve, however, that his keeper, from sheer fondness, would witness much greater suffering in the camp, ere he would consent to the sacrifice of his playful little friend.

16th. — We observed a hoar frost and some thin ice, this morning at sunrise; but at mid-day, the thermometer stood at 82°. We halted at noon, after making about fifteen miles, and dined. Saw large herds of buffalo on the plains of Sandy river, [71] grazing in every direction on the short and dry grass. Domestic cattle would certainly starve here, and yet the bison exists, and even becomes fat; a striking instance of the wonderful adaptation of Providence.

17th. — We had yesterday a cold rain, the first which has fallen in our track for several weeks. Our vicinity to the high mountains of Wind river will perhaps account for it. To-day at noon, the mercury stood at 92° in the shade, but there being a strong breeze, we did not suffer from heat.

Our course was still down the Sandy river, and we are now looking forward with no little pleasure to a rest of two or more weeks at the mountain rendezvous on the Colorado. Here we expect to meet all the mountain companies who left the States last spring, and also the trappers who come in from various parts, with the furs collected by them during the previous year. All will be mirth and jollity, no doubt, but the grand desideratum with some of us, is to allow our horses to rest their tired limbs and exhausted strength on the rich and verdant plains of the Siskadee. At our camp this evening, our poor horses were compelled to fast as heretofore, there being absolutely nothing for them to eat. Some of the famished animals attempted to allay their insatiable cravings, by cropping the dry and bitter tops of the wormwood with which the plain is strewed.

We look forward to brighter days for them ere long; soon shall they sport in the green pastures, and rest and plenty shall compensate for their toils and privations.

## [72] CHAPTER V

Arrival at the Colorado — The author in difficulty — Loss of a journal, and advice to travelling tyros — The rendezvous — Motley groups infesting it — Rum drinking, swearing, and other accomplishments in vogue — Description of the camp — Trout and grayling — Abundance of game — Cock of the plains — Departure from the rendezvous — An accession to the band — A renegado Blackfoot chief — Captain Stewart and Mr. Ashworth — Muddy creek — More carousing — Abundance of trout — Bear river — A hard day's march — Volcanic country — White clay pits and "Beer spring" — Rare birds and common birds — Mr. Thomas McKay — Rough and arid country — Meeting with Captain Bonneville's party — Captains Stewart and Wyeth's visit to the lodge of the "bald chief" — Blackfoot river — Adventure with a grizzly bear — Death of "Zip Koon" — Young grizzly bears and buffalo calves — A Blackfoot Indian — Dangerous experiment of McKay — the three "Tetons" — Large trout — Departure of our Indian companions — Shoshoné river — Site of "Fort Hall" — Preparations for a buffalo hunt.

*June 19th.* — We arrived to-day on the Green river, Siskadee<sup>38</sup> or Colorado of the west,— a beautiful, clear, deep, and rapid stream, which receives the waters of Sandy, — and encamped upon its eastern bank. After making a hasty meal, as it was yet early in the day, I sallied forth with my gun, and roamed about the neighborhood for several hours in quest of birds. On returning, towards evening, I found that the whole company had left the spot, the place being occupied only by a few hungry wolves, ravens, and magpies, the invariable gleaners of a forsaken camp.

I could not at first understand the meaning of all I saw. I thought the desertion strange, and was preparing to make the best of it, when a quick and joyful neigh sounded in the bushes near me, and I recognized the voice of my favorite horse. I found him carefully tied, with the saddle, &c., lying near him. I had not the least idea where the com-

<sup>38</sup> For this river see note 38 (Wyeth), *ante*, p. 60. The term "Siskadee" signified Prairie Hen River.— ED.

pany had gone, but I knew that on the rich, alluvial banks of the river, the trail of the horses would be distinct enough, and I determined to place my dependence, in a great measure, upon the sagacity of my excellent dumb friend, satisfied that he would take me the right course. I accordingly mounted, and off we went at a speed which I found some difficulty in restraining. About half an hour's hard riding brought us to the edge of a large branch of the stream, and I observed that the horses had here entered. I noticed other tracks lower down, but supposed them to have been made by the wanderings of the loose animals. Here then seemed the proper fording place, and with some little hesitation, I allowed my nag to enter the water; we had proceeded but a few yards, however, when down he went off a steep bank, far beyond his depth. This was somewhat disconcerting; but there was but one thing to be done, so I turned my horse's head against the swift current, and we went snorting and blowing for the opposite shore. We arrived at length, though in a sadly wet and damaged state, and in a few minutes after, came in view of the new camp.

Captain W. explained to me that he had heard of good pasture here, and had concluded to move immediately, on account of the horses; he informed me, also, that he had crossed the stream about fifty yards below the point where I had entered, and had found an excellent ford. I did not regret my adventure, however, and was congratulating myself upon my good fortune in arriving so seasonably, when, upon looking to my saddle, I discovered that my coat was missing. I had felt uncomfortably warm when I mounted, and had removed the coat and attached it carelessly to the saddle: the rapidity of the current had disengaged it, and it was lost forever. The coat itself was not of much consequence after the hard service it had seen, but it contained the [74] second volume of my journal, a pocket compass,

and other articles of essential value to me. I would gladly have relinquished every thing the garment held, if I could have recovered the book: and although I returned to the river, and searched assiduously until night, and offered large rewards to the men, it could not be found.

The journal commenced with our arrival at the Black Hills, and contained some observations upon the natural productions of the country, which to me, at least, were of some importance: as well as descriptions of several new species of birds, and notes regarding their habits, &c., which cannot be replaced.

I would advise all tourists, who journey by land, never to carry their itineraries upon their persons; or if they do, let them be attached by a cord to the neck, and worn under the clothing. A convenient and safe plan would probably be, to have the book deposited in a close pocket of leather, made on the inner side of the saddle-wing: it would thus be always at hand, and if a deep stream were to be passed the trouble of drying the leaves would not be a very serious matter.

In consequence of remaining several hours in wet clothes, after being heated by exercise, I rose the next morning with so much pain, and stiffness of the joints, that I could scarcely move. But notwithstanding this, I was compelled to mount my horse with the others, and to ride steadily and rapidly for eight hours. I suffered intensely during this ride; every step of my horse seemed to increase it, and induced constant sickness and retching.

When we halted, I was so completely exhausted, as to require assistance in dismounting, and shortly after, sank into a state of insensibility from which I did not recover for several hours. Then a violent fever commenced, alternating for two whole days, with sickness and pain. I think I never was more unwell in my [75] life: and if I

had been at home, lying on a feather bed instead of the cold ground, I should probably have fancied myself an invalid for weeks.<sup>39</sup>

22d. — We are now lying at the rendezvous. W. Sublette, Captains Serre, Fitzpatrick, and other leaders, with their companies, are encamped about a mile from us, on the same plain, and our own camp is crowded with a heterogeneous assemblage of visitors.<sup>40</sup> The principal of these are Indians, of the Nez Percé, Banneck and Shoshoné tribes, who come with the furs and peltries which they have been collecting at the risk of their lives during the past winter and spring, to trade for ammunition, trinkets, and "fire water."<sup>41</sup> There is, in addition to these, a great

<sup>39</sup> I am indebted to the kindness of my companion and friend, Professor Nuttall, for supplying, in a great measure, the deficiency occasioned by the loss of my journal.— TOWNSEND.

<sup>40</sup> The rendezvous for 1834 changed sites several times; see Wyeth's *Oregon Expeditions*, p. 225. The Rocky Mountain men were first met on Green River; the twentieth, they moved over to Ham's Fork, which was on the twenty-seventh again ascended a short distance for forage.

Thomas Fitzpatrick was one of the partners in the Rocky Mountain Fur Company, whose daring exploits and explorations of the mountains filled the thoughts of the men of his day. He was known to the Indians as "Broken Hand," from having shattered one of those members. He joined Ashley on his early expeditions, and was in the Arikara campaign of 1823; but his chief operations were between 1830 and 1836. In 1831, he went out on the Santa Fé trail, barely escaping when Jedidiah S. Smith was killed. From 1832 to 1835, he conducted the trade at the mountain rendezvous, once (1832) being lost some days in the mountains. In 1833 he was robbed by the Crows, probably at the instigation of a rival fur company. Upon the decline of the fur-trade, he continued to dwell on the frontier, acting as guide for government exploring expeditions, being commissioned captain, and later major. In 1850 he was agent for all the upper region of the Platte, and of great use in Indian negotiations.— ED

<sup>41</sup> For the Shoshoni, see Bradbury's *Travels*, in our volume v, p. 227, note 123; for the Nez Percés, Franchère's *Narrative*, vi, p. 340, note 145.

The Bannock are a Shoshonean tribe, whose habitat was midway between that of the Shoshoni proper and the Comanche, about the upper Lewis River and Great Salt Lake. They had the reputation of being fierce and treacherous, and next to the Blackfeet, were dreaded by white travelers. Lying athwart both the California and Oregon trails, they occasionally were formidable, although usually on trading terms with the trappers. They are now concentrated on the Fort Hall and Lemhi reservations in Idaho, intermingled with Shoshoni.— ED.

variety of personages amongst us; most of them calling themselves white men, French-Canadians, half-breeds, &c., their color nearly as dark, and their manners wholly as wild, as the Indians with whom they constantly associate. These people, with their obstreperous mirth, their whooping, and howling, and quarrelling, added to the mounted Indians, who are constantly dashing into and through our camp, yelling like fiends, the barking and baying of savage wolf-dogs, and the incessant cracking of rifles and carbines, render our camp a perfect bedlam. A more unpleasant situation for an invalid could scarcely be conceived. I am confined closely to the tent with illness, and am compelled all day to listen to the hiccoughing jargon of drunken traders, the *sacré* and *joutre* of Frenchmen run wild, and the swearing and screaming of our own men, who are scarcely less savage than the rest, being heated by the detestable liquor which circulates freely among them.

It is very much to be regretted that at times like the present, there should be a positive necessity to allow the men as much rum as they can drink, but this course has been sanctioned and [76] practised by all leaders of parties who have hitherto visited these regions, and reform cannot be thought of now. The principal liquor in use here is alcohol diluted with water. It is sold to the men at *three dollars* the pint! Tobacco, of very inferior quality, such as could be purchased in Philadelphia at about ten cents per pound, here brings two dollars! and everything else in proportion. There is no coin in circulation, and these articles are therefore paid for by the independent mountain-men, in beaver skins, buffalo robes, &c.; and those who are hired to the companies, have them charged against their wages.

I was somewhat amused to-day by observing one of

our newly hired men enter the tent, and order, with the air of a man who knew he would not be refused, *twenty dollars' worth of rum, and ten dollars worth of sugar*, to treat two of his companions who were about leaving the rendezvous!

30th.—Our camp here is a most lovely one in every respect, and as several days have elapsed since we came, and I am convalescent, I can roam about the country a little and enjoy it. The pasture is rich and very abundant, and it does our hearts good to witness the satisfaction and comfort of our poor jaded horses. Our tents are pitched in a pretty little valley or indentation in the plain, surrounded on all sides by low bluffs of yellow clay. Near us flows the clear deep water of the Siskadee, and beyond, on every side, is a wide and level prairie, interrupted only by some gigantic peaks of mountains and conical *butes* in the distance. The river, here, contains a great number of large trout, some grayling, and a small narrow-mouthed white fish, resembling a herring. They are all frequently taken with the hook, and, the trout particularly, afford excellent sport to the lovers of angling. Old Izaak Walton would be in his glory here, and the precautionary measures which he so strongly recommends in approaching a trout stream, he would not need to practise, as the fish is not [77] shy, and bites quickly and eagerly at a grasshopper or minnow.

Buffalo, antelopes, and elk are abundant in the vicinity, and we are therefore living well. We have seen also another kind of game, a beautiful bird, the size of a half grown turkey, called the cock of the plains, (*Tetrao urophasianus*.) We first met with this noble bird on the plains, about two days' journey east of Green river, in flocks, or *packs*, of fifteen or twenty, and so exceedingly tame as to allow an approach to within a few feet, run-

ning before our horses like domestic fowls, and not unfrequently hopping under their bellies, while the men amused themselves by striking out their feathers with their riding whips. When we first saw them, the temptation to shoot was irresistible; the guns were cracking all around us, and the poor grouse falling in every direction; but what was our disappointment, when, upon roasting them nicely before the fire, we found them so strong and bitter as not to be eatable. From this time the cock of the plains was allowed to roam free and unmolested, and as he has failed to please our palates, we are content to admire the beauty of his plumage, and the grace and spirit of his attitudes.

*July 2d.*—We bade adieu to the rendezvous this morning; packed up our moveables, and journied along the bank of the river. Our horses are very much recruited by the long rest and good pasture which they have enjoyed, and, like their masters, are in excellent spirits.

During our stay at the rendezvous, many of us looked anxiously for letters from our families, which we expected by the later caravans, but we were all disappointed. For myself, I have received but one since I left my home, but this has been my solace through many a long and dreary journey. Many a time, while pacing my solitary round as night-guard in the wilderness, have I [78] sat myself down, and stirring up the dying embers of the camp fire, taken the precious little memento from my bosom, undrawn the string of the leathern sack which contained it, and poured over the dear characters, till my eyes would swim with sweet, but sad recollections, then kissing the inanimate paper, return it to its sanctuary, tighten up my pistol belt, shoulder my gun, and with a quivering voice, swelling the "*all's well*" upon the night breeze, resume my slow and noiseless tramp around my sleeping companions.

Many of our men have left us, and joined the returning

companies, but we have had an accession to our party of about thirty Indians; Flat-heads, Nez Percés, &c., with their wives, children, and dogs. Without these our camp would be small; they will probably travel with us until we arrive on Snake river, and pass over the country where the most danger is to be apprehended from their enemies, the Black-feet.

Some of the women in this party, particularly those of the Nez Percé nation, are rather handsome, and their persons are decked off in truly savage taste. Their dresses of deer skin are profusely ornamented with beads and porcupine quills; huge strings of beads are hung around their necks, and their saddles are garnished with dozens of little hawk's bells, which jingle and make music for them as they travel along. Several of these women have little children tied to their backs, sewed up papoose fashion, only the head being seen; as they jolt along the road, we not unfrequently hear their voices ringing loud and shrill above the music of the bells. Other little fellows who have ceased to require the maternal contributions, are tied securely on other horses, and all their care seems to be to sleep, which they do most pertinaciously in spite of jolting, noise, and clamor. There is among this party, a Blackfoot chief, a renegado from his tribe, who sometime since killed the principal chief of his nation, and was [79] in consequence under the necessity of absconding. He has now joined the party of his hereditary foes, and is prepared to fight against his own people and kindred. He is a fine, warlike looking fellow, and although he takes part in all the war-songs, and sham-battles of his adopted brothers, and whoops, and howls as loud as the best of them, yet it is plain to perceive that he is distrusted and disliked. All men, whether, civilized or savage, honorable, or otherwise, detest and scorn a traitor!

We were joined at the rendezvous by a Captain Stewart, an English gentleman of noble family, who is travelling for amusement, and in search of adventure. He has already been a year in the mountains, and is now desirous of visiting the lower country, from which he may probably take passage to England by sea. Another Englishman, a young man, named Ashworth, also attached himself to our party, for the same purpose.<sup>42</sup>

Our course lay along the bank of Ham's fork, through a hilly and stony, but not a rocky country; the willow flourished on the margin of the stream, and occasionally the eye was relieved, on scanning the plain, by a pretty clump of cottonwood or poplar trees. The cock of the plains is very abundant here, and our pretty little summer yellow bird, (*Sylvia æstiva*), one of our most common birds at home, is our constant companion. How natural sounds his little monotonous stave, and how it seems to carry us back to the dear scenes which we have exchanged for the wild and pathless wilderness!

4th.—We left Ham's fork this morning,—now diminished to a little purling brook,—and passed across the hills in a north-westerly direction for about twenty miles, when we struck Muddy creek.<sup>43</sup> This is a branch of Bear river,

<sup>42</sup> Sir William Drummond Stuart, Bart., of Perthshire, Scotland, who was rumored to have served under Wellington, came to the United States (1833) to hunt big game in the Rockies. He sustained his share of the caravan's work, mounting guard and serving in the skirmishes against the Indians, and was highly respected by the mountain men. He went as far as the Columbia, on this expedition. See also Elliott Coues, *Forty Years a Fur-Trader on the Upper Missouri* (New York, 1898), index. Townsend is, so far as we are aware, the only contemporary traveller who mentions Ashworth in a published work.—ED.

<sup>43</sup> Ham's Fork is a western affluent of Black Fork of Green River, in southwestern Wyoming. It was an important stream on the Oregon Trail, which later bent southward from this point to Fort Bridger, going by Muddy Creek, another affluent of the Green. The Muddy Creek of Townsend, however, is a different stream, flowing into Bear River; it is not now known by this name. The Oregon Short Line railway, which follows Ham's Fork and crosses to the Bear, approximating Townsend's route, follows the valley of Rock Creek to the latter river.—ED.

which empties into the Salt lake, or "lake Bonneville," as it has been lately named, for what reason I know not. Our camp here, is a beautiful and most delightful one. A large plain, like a meadow, of rich, waving [80] grass, with a lovely little stream running through the midst, high hills, capped with shapely cedars on two sides, and on the others an immense plain, with snow clad mountains in the distance. This being a memorable day, the liquor kegs were opened, and the men allowed an abundance. We, therefore, soon had a renewal of the coarse and brutal scenes of the rendezvous. Some of the bacchanals called for a volley in honor of the day, and in obedience to the order, some twenty or thirty "happy" ones reeled into line with their muzzles directed to every point of the compass, and when the word "fire" was given, we who were not "happy" had to lie flat upon the ground to avoid the bullets which were careering through the camp.

In this little stream, the trout are more abundant than we have yet seen them. One of our *sober* men took, this afternoon, upwards of thirty pounds. These fish would probably average fifteen or sixteen inches in length, and weigh three-quarters of a pound; occasionally, however, a much larger one is seen.

5th. — We travelled about twenty miles this day, over a country abounding in lofty hills, and early in the afternoon arrived on Bear river, and encamped. This is a fine stream of about one hundred and fifty feet in width, with a moveable sandy bottom. The grass is dry and poor, the willow abounds along the banks, and at a distance marks the course of the stream, which meanders through an alluvial plain of four to six miles in width. At the distance of about one hundred miles from this point, the Bear river enters the Salt lake, a large body of salt water, without outlet, in which there is so large

an island as to afford streams of fresh water for goats and other animals living upon it.<sup>44</sup>

On the next day we crossed the river, which we immediately left, to avoid a great bend, and passed over some lofty ranges of hills and through rugged and stony valleys between them; the wind was blowing a gale right ahead, and clouds of dust were flying in our faces, so that at the end of the day, our countenances [81] were disguised as they were on the plains of the Platte. The march to-day has been a most laborious and fatiguing one both for man and beast; we have travelled steadily from morning till night, not stopping at noon; our poor horses' feet are becoming very much worn and sore, and when at length we struck Bear river again and encamped, the wearied animals refused to eat, stretching themselves upon the ground and falling asleep from very exhaustion.

Trout, grayling, and a kind of char are very abundant here — the first very large. The next day we travelled but twelve miles, it being impossible to urge our worn-out horses farther. Near our camp this evening we found some large gooseberries and currants, and made a hearty meal upon them. They were to us peculiarly delicious. We have lately been living entirely upon dried buffalo, without vegetables or bread; even this is now failing us,

---

<sup>44</sup> Bear River rises in the Uintah Mountains of northeastern Utah, and flows north and slightly northwest along the borders of Utah, Wyoming, and Idaho; until in Idaho, it takes a sudden bend southwest and south, and after a course of more than a hundred miles, enters Great Salt Lake. The trail struck this river near the southeastern corner of Idaho, following its course northwest to its bend — almost the identical route of the present Oregon Short Line railway.

Great Salt Lake had probably been seen by white men before the explorations of Ashley's party; but no authentic account of its discovery has been found before that of James Bridger, who in the winter of 1824-25 followed Bear River to its outlet. Finding the water salt he concluded it to be an arm of the ocean; but the following spring some of the party explored its coast line in skin-boats, finding no outlet. Captain Bonneville gave it his own name, but this is applied only to the geological area occupied by the lake in the quaternary era.— ED.

and we are upon short allowance. Game is very scarce, our hunters cannot find any, and our Indians have killed but two buffalo for several days. Of this small stock they would not spare us a mouthful, so it is probable we shall soon be hungry.

The alluvial plain here presents many unequivocal evidences of volcanic action, being thickly covered with masses of lava, and high walls and regular columns of basalt appear in many places. The surrounding country is composed, as usual, of high hills and narrow, stony valleys between them; the hills are thickly covered with a growth of small cedars, but on the plain, nothing flourishes but the everlasting wormwood, or *sage* as it is here called.

Our encampment on the 8th, was near what are called the "White-clay pits," still on Bear river. The soil is soft chalk, white and tenacious; and in the vicinity are several springs of strong supercarbonated water, which bubble up with all the activity of artificial fountains. The taste was very agreeable [82] and refreshing, resembling Saratoga water, but not so saline.<sup>45</sup> The whole plain to the hills, is covered with little mounds formed of calcareous sinter, having depressions on their summits, from which once issued streams of water. The extent of these eruptions, at some former period, must have been very great. At about half a mile distant, is an eruptive thermal spring of the temperature of 90°, and near this is an opening in the earth from which a stream of gas issues without water.

In a thicket of common red cedars, near our camp, I

---

<sup>45</sup> This is what is now known as Soda Springs, at the upper bend of Bear River. Irving describes it (*Rocky Mountains*, ii, p. 31) as an area of half a mile, with a dazzling surface of white clay, on which the springs have built up their mounds. It is, in miniature, what is found on a large scale in Yellowstone Park. One geyser exists in the form that Townsend describes. See Palmer's account, in our volume xxx.—ED.

found, and procured several specimens of two beautiful and rare birds which I had never before seen — the Lewis' woodpecker and Clark's crow, (*Picus torquatus* and *Corvus columbianus*.)

We remained the whole of the following day in camp to recruit our horses, and a good opportunity was thus afforded me of inspecting all the curiosities of this wonderful region, and of procuring some rare and valuable specimens of birds. Three of our hunters sallied forth in pursuit of several buffalo whose tracks had been observed by some of the men, and we were overjoyed to see them return in the evening loaded with the meat and marrow bones of two animals which they had killed.

We saw here the whooping crane, and white pelican, numerous; and in the small streams near the bases of the hills, the common canvass-back duck, shoveller, and black duck, (*Anas obscura*,) were feeding their young.

We were this evening visited by Mr. Thomas McKay,<sup>46</sup> an Indian trader of some note in the mountains. He is a step-son of Dr. McLaughlin, the chief factor at Fort Vancouver, on the [83] Columbia, and the leader of a

---

<sup>46</sup> This is the son of Mr. Alexander McKay, who was massacred by the Indians of the N. W. Coast on board the ship "Tonquin," an account of which is given in Irving's "Astoria." I have often heard McKay speak of the tragical fate of his parent, and with the bitter animosity and love of revenge inherited from his Indian mother, I have heard him declare that he will yet be known on the coast as the avenger of blood.— TOWNSEND.

*Comment by Ed.* For Alexander McKay, consult Franchère's *Narrative* in our volume vi, p. 186, note 9..

Thomas McKay was born at Sault Ste. Marie, and when a lad (1811) came with his father to Oregon. After the failure of the Astoria enterprise, he entered the North West Company, and fought under their banner in the battle on Red River in 1816. Returning to Oregon, he became an important agent of the Hudson's Bay Company, under his step-father's management, usually in charge of the Snake River brigade. He was brave, dashing, a sure shot, and the idol of the half-breeds. He had a farm in Multnomah valley, and became a United States citizen, raising a company of militia which did active service in the Cayuse War of 1848.

party of Canadians and Indians, now on a hunt in the vicinity. This party is at present in our rear, and Mr. McKay has come ahead in order to join us, and keep us company until we reach Portneuf river, where we intend building a fort.

10th.—We were moving early this morning: our horses were very much recruited, and seemed as eager as their masters to travel on. It is astonishing how soon a horse revives, and overcomes the lassitude consequent upon fatigue, when he is allowed a day's rest upon tolerable pasture. Towards noon, however, after encountering the rough lava-strewn plain for a few hours, they became sufficiently sobered to desist from all unnecessary curvetting and prancing, and settled down into a very matter-of-fact trudge, better suited to the country and to the work which they have yet to do.

Soon after we left, we crossed one of the high and stony hills by which our late camp is surrounded; then making a gentle descent, we came to a beautiful and very fertile plain. This is, however, very different from the general face of the country; in a short time, after passing over the rich prairie, the same dry aridity and depauperation prevailed, which is almost universal west of the mountains. On the wide plain, we observed large sunken spots, some of them of great extent, surrounded by walls of lava, indicating the existence, at some very ancient date, of active craters. These eruptions have probably been antediluvian, or have existed at a period long anterior to the present order of creation. On the side of the hills are high walls of lava and basaltic dykes, and many large and dark caves are formed by the juxtaposition of the enormous masses.

Early in the afternoon we passed a large party of white men, encamped on the lava plain near one of the small streams. Horses were tethered all around, and men were

lolling about playing games of cards, and loitering through the camp, as [84] though at a loss for employment. We soon ascertained it to be Captain Bonneville's company resting after the fatigues of a long march.<sup>47</sup> Mr. Wyeth and Captain Stewart visited the lodge of the "bald chief," and our party proceeded on its march. The difficulties of the route seemed to increase as we progressed, until at length we found ourselves wedged in among huge blocks of lava and columns of basalt, and were forced, most reluctantly, to retrace our steps for several miles, over the impediments which we had hoped we were leaving forever behind us. We had nearly reached Bonneville's camp again, when Captains Wyeth and Stewart joined us, and we struck into another path which proved more tolerable. Wyeth gave us a rather amusing account of his visit to the worthy captain. He and Captain Stewart were received very kindly by the veteran, and every delicacy that the lodge afforded was brought forth to do them honor. Among the rest, was some *metheglen* or diluted alcohol sweetened with honey, which the good host had concocted; this dainty beverage was set before them, and the thirsty guests were not slow in taking advantage of the invitation so obligingly given. Draught after draught of the precious liquor disappeared down the throats of the visitors, until the anxious, but still complaisant captain, began to grow uneasy.

"I beg you will help yourselves, gentlemen," said the host, with a smile which he intended to express the utmost urbanity, but which, in spite of himself, had a certain ghastliness about it.

"Thank you, sir, we will do so freely," replied the two worthies, and away went the metheglen as before.

---

<sup>47</sup> Compare Irving's account of this meeting, in *Rocky Mountains*, ii, pp. 175-182.—ED.

Cup after cup was drained, until the hollow sound of the keg indicated that its contents were nearly exhausted, when the company rose, and thanking the kind host for his noble entertainment, were bowed out of the tent with all the polite formality which the accomplished captain knows so well how to assume.

Towards evening, we struck Blackfoot river, a small, sluggish, [85] stagnant stream, heading with the waters of a rapid rivulet passed yesterday, which empties into the Bear river.<sup>48</sup> This stream passes in a north-westerly direction through a valley of about six miles in width, covered with quagmires, through which we had great difficulty in making our way. As we approached our encampment, near a small grove of willows, on the margin of the river, a tremendous grizzly bear rushed out upon us. Our horses ran wildly in every direction, snorting with terror, and became nearly unmanageable. Several balls were instantly fired into him, but they only seemed to increase his fury. After spending a moment in rendering each wound, (their invariable practice,) he selected the person who happened to be nearest, and darted after him, but before he proceeded far, he was sure to be stopped again by a ball from another quarter. In this way he was driven about amongst us for perhaps fifteen minutes, at times so near some of the horses, that he received several severe kicks from them. One of the pack horses was fairly fastened upon by the terrific claws of the brute, and in the terrified animal's efforts to escape the dreaded gripe, the pack and saddle were broken to pieces and disengaged. One of our mules also lent him a kick in the head while pursuing it up an adjacent hill, which sent him rolling to the bottom. Here he was finally brought to a stand.

---

<sup>48</sup> Blackfoot River is an eastern affluent of Lewis (or Snake) River, next above Portneuf. Its general course is northwest, entering the main river at Blackfoot, Idaho. Wyeth passed only along its upper reaches.—ED.

The poor animal was so completely surrounded by enemies that he became bewildered. He raised himself upon his hind feet, standing almost erect, his mouth partly open, and from his protruding tongue the blood fell fast in drops. While in this position, he received about six more balls, each of which made him reel. At last, as in complete desperation, he dashed into the water, and swam several yards with astonishing strength and agility, the guns cracking at him constantly; but he was not to proceed far. Just then, Richardson, who had been absent, rode up, and fixing his deadly aim upon him, fired a ball into the back [86] of his head, which killed him instantly. The strength of four men was required to drag the ferocious brute from the water, and upon examining his body, he was found completely riddled; there did not appear to be four inches of his shaggy person, from the hips upward, that had not received a ball. There must have been at least thirty shots made at him, and probably few missed him; yet such was his tenacity of life, that I have no doubt he would have succeeded in crossing the river, but for the last shot in the brain. He would probably weigh, at the least, six hundred pounds, and was about the height of an ordinary steer. The spread of the foot, laterally, was ten inches, and the claws measured seven inches in length. This animal was remarkably lean; when in good condition, he would, doubtless, much exceed in weight the estimate I have given. Richardson, and two other hunters, in company, killed two in the course of the afternoon, and saw several others.

This evening, our pet antelope, poor little "Zip Koon," met with a serious accident. The mule on which he rode, got her feet fastened in some lava blocks, and, in the struggle to extricate herself, fell violently on the pointed fragments. One of the delicate legs of our favorite was

broken, and he was otherwise so bruised and hurt, that, from sheer mercy, we ordered him killed. We had hoped to be able to take him to the fort which we intend building on the Portneuf river, where he could have been comfortably cared for. This is the only pet we have had in the camp, which continued with us for more than a few days. We have sometimes taken young grizzly bears, but these little fellows, even when not larger than puppies, are so cross and snappish, that it is dangerous to handle them, and we could never become attached to any animal so ungentle, and therefore young "*Ephraim*," (to give him his mountain cognomen,) generally meets with but little mercy from us when his evil genius throws him in our way. The young buffalo calf is also very [87] often taken, and if removed from the mother, and out of sight of the herd, he will follow the camp as steadily as a dog; but his propensity for keeping close to the horse's heels often gets him into trouble, as he meets with more kicks than caresses from them. He is considered an interloper, and treated accordingly. The bull calf of a month or two old, is sometimes rather difficult to manage; he shows no inclination to follow the camp like the younger ones, and requires to be dragged along by main force. At such times, he watches for a good opportunity, and before his captor is aware of what is going on, he receives a *butt* from the clumsy head of the intractable little brute, which, in most cases, lays him sprawling upon the ground.

I had an adventure of this sort a few days before we arrived at the rendezvous. I captured a large bull calf, and with considerable difficulty, managed to drag him into the camp, by means of a rope noosed around his neck, and made fast to the high pommel of my saddle. Here I attached him firmly by a cord to a stake driven into the

ground, and considered him secure. In a few minutes, however, he succeeded in breaking his fastenings, and away he scoured out of the camp. I lost no time in giving chase, and although I fell flat into a ditch, and afforded no little amusement to our people thereby, I soon overtook him, and was about seizing the stranded rope, which was still around his neck, when, to my surprise, the little animal showed fight; he came at me with all his force, and dashing his head into my breast, bore me to the ground in a twinkling. I, however, finally succeeded in recapturing him, and led and pushed him back into the camp; but I could make nothing of him; his stubbornness would neither yield to severity or kindness, and the next morning I loosed him and let him go.

11th.—On ascending a hill this morning, Captain Wyeth, who was at the head of the company, suddenly espied an Indian stealing cautiously along the summit, and evidently endeavoring [88] to conceal himself. Captain W. directed the attention of McKay to the crouching figure, who, the moment he caught a glimpse of him, exclaimed, in tones of joyful astonishment, “a Blackfoot, by — !” and clapping spurs to his horse, tore up the hill with the most frantic eagerness, with his rifle poised in his hand ready for a shot. The Indian disappeared over the hill like a lightning flash, and in another second, McKay was also out of sight, and we could hear the rapid clatter of his horse's hoofs, in hot pursuit after the fugitive. Several of the men, with myself, followed after at a rapid gait, with, however, a very different object. Mine was simply curiosity, mingled with some anxiety, lest the wily Indian should lead our impetuous friend into an ambushment, and his life thus fall a sacrifice to his temerity. When we arrived at the hill-top, McKay was gone, but we saw the track of his horse passing down the side of

it, and we traced him into a dense thicket about a quarter of a mile distant. Several of our hardy fellows entered this thicket, and beat about for some time in various directions, but nothing could they see either of McKay or the Indian. In the mean time, the party passed on, and my apprehensions were fast settling into a certainty that our bold companion had found the death he had so rashly courted, when I was inexpressibly relieved by hearing the crackling of the bushes near, which was immediately followed by the appearance of the missing man himself.

He was in an excessively bad humor, and grumbled audibly about the "Blackfoot rascal getting off in that cowardly fashion," without at all heeding the congratulations which I was showering upon him for his almost miraculous escape. He was evidently not aware of having been peculiarly exposed, and was regretting, like the hunter who loses his game by a sudden shift of wind, that his human prey had escaped him.

The appearance of this Indian is a proof that others are lurking near; and if the party happens to be large, they may give us [89] some trouble. We are now in a part of the country which is almost constantly infested by the Blackfeet; we have seen for several mornings past, the tracks of moccasins around our camp, and not unfrequently the prints of unshod horses, so that we know we are narrowly watched; and the slumbering of one of the guard, or the slightest appearance of carelessness in the conduct of the camp, may bring the savages whooping upon us like demons.

Our encampment this evening is on one of the head branches of the Blackfoot river, from which we can see the three remarkable conic summits known by the name of the "*Three Butes*" or "*Tetons*." Near these flows the

Portneuf, or south branch of Snake or Lewis' river.<sup>49</sup> Here is to be another place of rest, and we look forward to it with pleasure both on our own account and on that of our wearied horses.

12th.—In the afternoon we made a camp on Ross's creek, a small branch of Snake river.<sup>50</sup> The pasture is better than we have had for two weeks, and the stream contains an abundance of excellent trout. Some of these are enormous, and very fine eating. They bite eagerly at a grasshopper or minnow, but the largest fish are shy, and the sportsman requires to be carefully concealed in order to take them. We have here none of the fine tackle, jointed rods, reels, and silkworm gut of the accomplished city sportsman; we have only a piece of common cord, and a hook seized on with half-hitches, with a willow rod cut on the banks of the stream; but with this rough equipment we take as many trout as we wish, and who could do more, even with all the curious contrivances of old Izaak Walton or Christopher North?

The band of Indians which kept company with us from the rendezvous, left us yesterday, and fell back to join Captain Bonneville's party, which is travelling on behind. We do not regret their absence; for although they added strength to our band, and [90] would have been useful in case of an attack from Blackfeet, yet they added very materially to our cares, and gave us some trouble by their noise, confusion, and singing at night.

---

<sup>49</sup> Townsend probably refers to the Three Buttes of the Lewis River plain, about forty miles west of their camp. The Three Tetons — a magnificent group of snow-clad mountains — were sixty miles northeast, in the present Teton Forest Reservation, Wyoming.

Portneuf is an eastern affluent of Lewis River, and a well-known halting place on the Oregon Trail.—ED.

<sup>50</sup> Ross's Creek is in reality an affluent of Portneuf. The usual route from Soda Springs, on Bear River, was by way of the Portneuf; the route by Blackfoot and Ross's Creek was somewhat shorter, although rougher.—ED.

On the 14th, we travelled but about six miles, when a halt was called, and we pitched our tents upon the banks of the noble Shoshoné or Snake river. It seems now, as though we were really nearing the western extremity of our vast continent. We are now on a stream which pours its waters directly into the Columbia, and we can form some idea of the great Oregon river by the beauty and magnitude of its tributary. Soon after we stopped, Captain W., Richardson, and two others left us to seek for a suitable spot for building a fort, and in the evening they returned with the information that an excellent and convenient place had been pitched upon, about five miles from our present encampment. On their route, they killed a buffalo, which they left at the site of the fort, suitably protected from wolves, &c. This is very pleasing intelligence to us, as our stock of dried meat is almost exhausted, and for several days past we have been depending almost exclusively upon fish.

The next morning we moved early, and soon arrived at our destined camp. This is a fine large plain on the south side of the Portneuf, with an abundance of excellent grass and rich soil. The opposite side of the river is thickly covered with large timber of the cottonwood and willow, with a dense undergrowth of the same, intermixed with service-berry and currant bushes.<sup>51</sup>

Most of the men were immediately put to work, felling trees, making horse-pens, and preparing the various requisite

---

<sup>51</sup> This statement concerning the site of Fort Hall does not agree with that of later writers; possibly the fort was removed later, for Frémont in 1844 describes it as being nine miles above the mouth of Portneuf, on the narrow plain between that and Lewis River. The fort was named for Henry Hall, senior member of the firm furnishing Wyeth's financial backing. Wyeth sold this fort to the Hudson's Bay Company in 1836. The present Fort Hall, a government post, is forty miles northeast of the old fort, on Lincoln Creek, an affluent of Blackfoot River. It was built in May, 1870, and there, since that time, a garrison has been maintained.—ED.

materials for the building, while others were ordered to get themselves in readiness for a start on the back track, in order to make a hunt, and procure meat for the camp. To this party I have attached myself, and all my leisure time to-day is employed in preparing for it.

Our number will be twelve, and each man will lead a mule with [91] a pack-saddle, in order to bring in the meat that we may kill. Richardson is the principal of this party, and Mr. Ashworth has also consented to join us, so that I hope we shall have an agreeable trip. There will be but little hard work to perform; our men are mostly of the best, and no rum or cards are allowed.

## [92] CHAPTER VI

Departure of the hunting camp — A false alarm — Blackfeet Indians — their ferocity — Requisites of a mountain-man — Good fare, and good appetites — An experiment — Grizzly bears — Visit of a Nez Percé Indian — Adventure with a grizzly bear — Hunter's anecdotes — Homeward bound — Accident from gunpowder — Arrival at "Fort Hall" — A salute — Emaciation of some of the party from low diet — Mr. McKay's company — Buffalo lodges — Progress of the building — Effects of judicious training — Indian worship — A "Camp Meeting" — Mr. Jason Lee, a favorite — A fatal accident and a burial.

*July 16th.*— Our little hunting party of twelve men, rode out of the encampment this morning, at a brisk trot, which gait was continued until we arrived at our late encampment on Ross' creek, having gone about thirty miles. Here we came to a halt, and made a hearty meal on a buffalo which we had just killed. While we were eating, a little Welshman, whom we had stationed outside our camp to watch the horses, came running to us out of breath, crying in a terrified falsetto, "*Indians, Indians!*" In a moment every man was on his feet, and his gun in his hand; the horses were instantly surrounded, by Richardson's direction, and driven into the bushes, and we were preparing ourselves for the coming struggle, when our hunter, peering out of the thick copse to mark the approach of the enemy, burst at once into a loud laugh, and muttering something about a Welsh coward, stepped boldly from his place of concealment, and told us to follow him. When we had done so, we perceived the band approaching steadily, and it seemed warily, along the path directly in our front. Richardson said something to them in an unknown tongue, which immediately brought several of the strangers towards [93] us at full gallop. One of these was a Canadian, as his

peculiar physiognomy, scarlet sash, and hat ribbons of gaudy colors, clearly proved, and the two who accompanied him, were Indians. These people greeted us with great cordiality, the more so, perhaps, as they had supposed, on seeing the smoke from our fire, that we were a band of Blackfeet, and that, therefore, there was no alternative for them but to fight. While we were conversing, the whole party, of about thirty, came up, and it needed but a glance at the motley group of tawdrily dressed hybrid boys, and blanketed Indians, to convince us that this was McKay's company travelling on to join him at Fort Hall.

They inquired anxiously about their leader, and seemed pleased on being informed that he was so near; the prospect of a few days' rest at the fort, and the *regale* by which their arrival was sure to be commemorated, acted upon the spirits of the mercurial young half-breeds, like the potent liquor which they expected soon to quaff in company with the kindred souls who were waiting to receive them.

They all seemed hungry, and none required a second invitation to join us at our half finished meal. The huge masses of savoury fleece meat, hump-ribs, and side-ribs disappeared, and were polished with wonderful dispatch; the Canadians ate like half famished wolves, and the sombre Indians, although slower and more sedate in their movements, were very little behind their companions in the agreeable process of mastication.

The next day we rode thirty-four miles, and encamped on a pretty little stream, fringed with willows, running through the midst of a large plain. Within a few miles, we saw a small herd of buffalo, and six of our company left the camp for a hunt. In an hour two of them returned, bringing the meat of one animal. We all commenced work immediately, cutting it in thin slices, and hanging it on

the bushes to dry. By sundown, our work was finished, and soon after dark, the remaining hunters [94] came in, bringing the best parts of three more. This will give us abundance of work for to-morrow, when the hunters will go out again.

Richardson and Sansbury mention having seen several Blackfeet Indians to-day, who, on observing them, ran rapidly away, and, as usual, concealed themselves in the bushes. We are now certain that our worst enemies are around us, and that they are only waiting for a favorable time and opportunity to make an attack. They are not here for nothing, and have probably been dogging us, and reconnoitering our outposts, so that the greatest caution and watchfulness will be required to prevent a surprise. We are but a small company, and there may be at this very moment hundreds within hearing of our voices.

The Blackfoot is a sworn and determined foe to all white men, and he has often been heard to declare that he would rather hang the scalp of a "pale face" to his girdle, than kill a buffalo to prevent his starving.

The hostility of this dreaded tribe is, and has for years been, proverbial. They are, perhaps, the only Indians who do not fear the power, and who refuse to acknowledge the superiority of the white man; and though so often beaten in conflicts with them, even by their own mode of warfare, and generally with numbers vastly inferior, their indomitable courage and perseverance still urges them on to renewed attempts; and if a single scalp is taken, it is considered equal to a great victory, and is hailed as a presage of future and more extensive triumphs.

It must be acknowledged, however, that this determined hostility does not originate solely in savage malignity, or an abstract thirst for the blood of white men; it is fomented and kept alive from year to year by incessant provocatives

on the part of white hunters, trappers, and traders, who are at best but intruders on the rightful domains of the red man of the wilderness. [95] Many a night have I sat at the camp-fire, and listened to the recital of bloody and ferocious scenes, in which the narrators were the actors, and the poor Indians the victims, and I have felt my blood tingle with shame, and boil with indignation, to hear the diabolical acts applauded by those for whose amusement they were related. Many a precious villain, and merciless marauder, was made by these midnight tales of rapine, murder, and robbery: many a stripling, in whose tender mind the seeds of virtue and honesty had never germinated, burned for an opportunity of loading his pack-horse with the beaver skins of some solitary Blackfoot trapper, who was to be murdered and despoiled of the property he had acquired by weeks, and perhaps months, of toil and danger.

Acts of this kind are by no means unfrequent, and the subjects of this sort of atrocity are not always the poor and despised Indians: white men themselves often fall by the hands of their companions, when by good fortune and industry they have succeeded in loading their horses with fur. The fortunate trapper is treacherously murdered by one who has eaten from the same dish and drank from the same cup, and the homicide returns triumphantly to his camp with his ill gotten property. If his companion be inquired for, the answer is that some days ago they parted company, and he will probably soon join them.

The poor man never returns — no one goes to search for him — he is soon forgotten, or is only remembered by one more steadfast than the rest, who seizes with avidity the first opportunity which is afforded, of murdering an unoffending Indian in revenge for the death of his friend.

On the 20th, we moved our camp to a spot about twelve miles distant, where Richardson, with two other hunters, stopped yesterday and spent the night. They had killed several buffalo here, and were busily engaged in preparing the meat when we joined them. They gave us a meal of excellent cow's flesh, and [96] I thought I never had eaten anything so delicious. Hitherto we have had only the bulls which are at this season poor and rather unsavory, but now we are feasting upon the *best food in the world*.

It is true we have nothing but meat and good cold water, but this is all we desire: we have excellent appetites, no dyspepsia, clear heads, sharp ears, and high spirits, and what more does a man require to make him happy?

We rise in the morning with the sun, stir up our fires, and *roast* our breakfast, eating usually from one to two pounds of meat at a morning meal. At ten o'clock we lunch, dine at two, sup at five, and lunch at eight, and during the night-watch commonly provide ourselves with two or three "hump-ribs" and a marrow bone, to furnish employment and keep the drowsy god at a distance.

Our present camp is a beautiful one. A rich and open plain of luxuriant grass, dotted with buffalo in all directions, a high picturesque hill in front, and a lovely stream of cold mountain water flowing at our feet. On the borders of this stream, as usual, is a dense belt of willows, and under the shade of these we sit and work by day, and sleep soundly at night. Our meat is now dried upon scaffolds constructed of old timber which we find in great abundance upon the neighboring hill. We keep a fire going constantly, and when the meat is sufficiently dried, it is piled on the ground, preparatory to being baled.

21st.—The buffalo appear even more numerous than when we came, and much less suspicious than common. The bulls frequently pass slowly along within a hundred

yards of us, and toss their shaggy and frightful looking heads as though to warn us against attacking or approaching them.

Towards evening, to-day, I walked out with my gun, in the direction of one of these prowling monsters, and the ground in his vicinity being covered densely with bushes, I determined to [97] approach as near him as possible, in order to try the efficacy of a ball planted directly in the centre of the forehead. I had heard of this experiment having been tried without success and I wished to ascertain the truth for myself.

“Taking the wind” of the animal, as it is called, (that is, keeping to leeward, so that my approach could not be perceived by communicating a taint to the air,) I crawled on my hands and knees with the utmost caution towards my victim. The unwieldy brute was quietly and unsuspectingly cropping the herbage, and I had arrived to within feet of him, when a sudden flashing of the eye, and an impatient motion, told me that I was observed. He raised his enormous head, and looked around him, and so truly terrible and grand did he appear, that I must confess, (in your ear,) I felt awed, almost frightened, at the task I had undertaken. But I had gone too far to retreat; so, raising my gun, I took deliberate aim at the bushy centre of the forehead, and fired. The monster shook his head, pawed up the earth with his hoofs, and making a sudden spring, accompanied by a terrific roar, turned to make his escape. At that instant, the ball from the second barrel penetrated his vitals, and he measured his huge length upon the ground. In a few seconds he was dead. Upon examining the head, and cutting away the enormous mass of matted hair and skin which enveloped the skull, my large bullet of twenty to the pound, was found completely flattened against the bone, having carried with

it, through the interposing integument, a considerable portion of the coarse hair, but without producing the smallest fracture. I was satisfied; and taking the tongue, (the hunter's perquisite,) I returned to my companions.

This evening the roaring of the bulls in the *gang* near us is terrific, and these sounds are mingled with the howling of large packs of wolves, which regularly attend upon them, and the hoarse screaming of hundreds of ravens flying over head. The dreaded [98] grizzly bear is also quite common in this neighborhood; two have just been seen in some bushes near, and they visit our camp almost every night, attracted by the piles of meat which are heaped all around us. The first intimation we have of his approach is a great *grunt* or *snort*, unlike any sound I ever heard, but much more querulous than fierce; then we hear the scraping and tramping of his huge feet, and the snuffing of his nostrils, as the savory scent of the meat is wafted to them. He approaches nearer and nearer, with a stealthy and fearful pace, but just as he is about to accomplish the object of his visit, he suddenly stops short; the snuffing is repeated at long and trembling intervals, and if the slightest motion is then made by one of the party, away goes "*Ephraim*," like a cowardly burglar as he is, and we hear no more of him that night.

On the 23d a Nez Percé Indian, belonging to Mr. McKay's company visited us. He is one of several hundred who have been sent from the fort on the same errand as ourselves. This was a middle aged man, with a countenance in which shrewdness or cunning, and complaisance, appeared singularly blended. But his person was a perfect wonder, and would have served admirably for the study of a sculptor. The form was perfection itself. The lower limbs were entirely naked, and the upper part of the person was only covered by a short checked shirt. His blanket

lay by his side as he sat with us, and was used only while moving. I could not but admire the ease with which the man squatted on his haunches immediately as he alighted, and the position both of body and limbs was one that, probably, no white man unaccustomed to it, could have endured for many minutes together. The attitude, and indeed the whole figure was graceful and easy in the extreme; and on criticising his person, one was forcibly reminded of the Apollo Belvidere of Canova. His only weapons were a short bow and half a dozen arrows, a scalping knife and tomahawk; with these, however, weak and inefficient [99] as they seemed, he had done good service, every arrow being smeared with blood to the feathers. He told Richardson that he and his three or four companions had killed about sixty buffalo, and that now, having meat enough, they intended to return to their camp to-morrow.

This afternoon I observed a large flock of wild geese passing over; and upon watching them, perceived that they alighted about a mile and a half from us, where I knew there was a lake. Concluding that a little change of diet might be agreeable, I sallied forth with my gun across the plain in quest of the birds. I soon arrived at a thick copse of willow and currant bushes, which skirted the water, and was about entering, when I heard a sort of angry growl or grunt directly before me — and instantly after, saw a grizzly bear of the largest kind erect himself upon his hind feet within a dozen yards of me, his savage eyes glaring with horrible malignity, his mouth wide open, and his tremendous paws raised as though ready to descend upon me. For a moment, I thought my hour had come, and that I was fated to die an inglorious death away from my friends and my kindred; but after waiting a moment in agonizing suspense, and the bear showing no inclination to advance, my lagging courage returned, and cocking

both barrels of my gun, and presenting it as steadily as my nerves would allow, full at the shaggy breast of the creature, I retreated slowly backwards. Bruin evidently had no notion of braving gunpowder, but I did not know whether, like a dog, if the enemy retreated he would not yet give me a chase; so when I had placed about a hundred yards between us, I wheeled about and flew, rather than ran, across the plain towards the camp. Several times during this run for life, (as I considered it,) did I fancy that I heard the bear at my heels; and not daring to look over my shoulder to ascertain the fact, I only increased my speed, until the camp was nearly gained, when, from sheer exhaustion I relaxed my efforts, fell flat upon the ground, and [100] looked behind me. The whole space between me and the copse was untenanted, and I was forced to acknowledge, with a feeling strongly allied to shame, that my fears alone had represented the bear in chase of me.

When I arrived in camp, and told my break-neck adventure to the men, our young companion, Mr. Ashworth, expressed a wish to go and kill the bear, and requested the loan of my double-barrelled gun for this purpose. This I at first peremptorily refused, and the men, several of whom were experienced hunters, joined me in urging him not to attempt the rash adventure. At length, however, finding him determined on going, and that rather than remain, he would trust to his own single gun, I was finally induced to offer him mine, with a request, (which I had hoped would check his daring spirit,) that he would leave the weapon in a situation where I could readily find it; for after he had made one shot, he would never use a gun again.

He seemed to heed our caution and advice but little, and, with a dogged and determined air, took the way across

the plain to the bushes, which we could see in the distance. I watched him for some time, until I saw him enter them, and then, with a sigh that one so young and talented should be lost from amongst us, and a regret that we did not forcibly prevent his going, I sat myself down, distressed and melancholy. We all listened anxiously to hear the report of the gun; but no sound reaching our ears, we began to hope that he had failed in finding the animal, and in about fifteen minutes, to my inexpressible relief, we saw him emerge from the copse, and bend his steps slowly towards us. When he came in, he seemed disappointed, and somewhat angry. He said he had searched the bushes in every direction, and although he had found numerous footprints, no bear was to be seen. It is probable that when I commenced my retreat in one direction, bruin made off in the other, and that although he was willing to dispute the ground with me, and prevent my [101] passing his lair, he was equally willing to back out of an engagement in which his fears suggested that he might come off the loser.

This evening, as we sat around the camp fire, cozily wrapped in our blankets, some of our old hunters became garrulous, and we had several good "yarns," as a sailor would say. One told of his having been shot by a Black-foot Indian, who was disguised in the skin of an elk, and exhibited, with some little pride, a great cicatrix which disfigured his neck. Another gave us an interesting account of an attack made by the Comanche Indians upon a party of Santa-Fee traders, to which he had been attached. The white men, as is usual in general engagements with Indians, gained a signal victory, not, however, without the loss of several of their best hunters; and the old man who told the story, — "uncle John," as he was usually called, — shed tears at the recollection of the death of

his friends; and during that part of his narrative, was several times so much affected as to be unable to speak.<sup>52</sup>

The best story, however, was one told by Richardson, of a meeting he once had with three Blackfeet Indians. He had been out alone hunting buffalo, and towards the end of the day was returning to the camp with his meat, when he heard the clattering of hoofs in the rear, and, upon looking back, observed three Indians in hot pursuit of him.

He immediately *discharged his cargo* of meat to lighten his horse, and then urged the animal to his utmost speed, in an attempt to distance his pursuers. He soon discovered, however, that the enemy was rapidly gaining upon him, and that in a few [102] minutes more, he would be completely at their mercy, when he hit upon an expedient, as singular as it was bold and courageous. Drawing his long scalping knife from the sheath at his side, he plunged the keen weapon through his horse's neck, and severed the spine. The animal dropped instantly dead, and the determined hunter, throwing himself behind the fallen carcass, waited calmly the approach of his sanguinary pursuers. In a few moments, one Indian was within range of the fatal rifle, and at its report, his horse galloped riderless over the plain. The remaining two then thought to take him at advantage by approaching simultaneously on both sides of his rampart; but one of them, happening to venture too near in order to be sure of his aim, was shot to the heart by the long pistol of the white man, at the very instant that the ball from the Indian's gun whistled harmlessly by. The third savage, being wearied of the

---

<sup>52</sup> I have repeatedly observed these exhibitions of feeling in some of our people upon particular occasions, and I have been pleased with them, as they seemed to furnish an evidence, that amid all the mental sterility, and absence of moral rectitude, which is so deplorably prevalent, there yet lingers some kindness of heart, some sentiments which are not wholly depraved.—TOWNSEND.

dangerous game, applied the whip vigorously to the flanks of his horse, and was soon out of sight, while Richardson set about collecting the trophies of his singular victory.

He caught the two Indians' horses; mounted one, and loaded the other with the meat which he had discarded, and returned to his camp with two spare rifles, and a good stock of ammunition.

On the morning of the 25th, we commenced baling up our meat in buffalo skins dried for the purpose. Each bale contains about a hundred pounds, of which a mule carries two; and when we had finished, our twelve long-eared friends were loaded. Our limited term of absence is now nearly expired, and we are anxious to return to the fort in order to prepare for the journey to the lower country.

At about 10 o'clock, we left our pleasant encampment, and bade adieu to the cold spring, the fat buffalo, and grizzly bears, and urging our mules into their fastest walk, we jolted along with our *provant* towards the fort.

[103] In about an hour after, an unpleasant accident happened to one of our men, named McCarey. He had been running a buffalo, and was about reloading the gun, which he had just discharged, when the powder in his horn was ignited by a burning wad remaining in the barrel; the horn was burst to fragments, the poor man dashed from his horse, and his face, neck, and hands, burnt in a shocking manner. We applied, immediately, the simple remedies which our situation and the place afforded, and in the course of an hour he was somewhat relieved, and travelled on with us, though in considerable suffering. His eyes were entirely closed, the lids very much swollen, and his long, flowing hair, patriarchal beard and eye-brows, had all vanished in smoke. It will be long ere he gets another such crop.

The weather here is generally uncomfortably warm,

so much so, that we discard, while travelling, all such encumbrances as coats, neckcloths, &c., but the nights are excessively cold, ice often forming in the camp kettles, of the thickness of half an inch, or more. My custom has generally been to roll myself in my blanket at night, and use my large coat as a pillow; but here the coat must be worn, and my saddle has to serve the purpose to which the coat is usually applied.

We travelled, this day, thirty miles, and the next afternoon, at 4 o'clock, arrived at the fort. On the route we met three hunters, whom Captain W. had sent to kill game for the camp. They informed us that all hands have been for several days on short allowance, and were very anxious for our return.

When we came in sight of the fort, we gave them a mountain salute, each man firing his gun in quick succession. They did not expect us until to-morrow, and the firing aroused them instantly. In a very few minutes, a score of men were armed and mounted, and dashing out to give battle to the advancing Indians, as they thought us. The general supposition was, that [104] their little hunting party had been attacked by a band of roving Blackfeet, and they made themselves ready for the rescue in a space of time that did them great credit.

It was perhaps "*bad medicine*," (to use the mountain phrase,) to fire a salute at all, inasmuch as it excited some unnecessary alarm, but it had the good effect to remind them that danger might be near when they least expected it, and afforded them an opportunity of showing the promptness and alacrity with which they could meet and brave it.

Our people were all delighted to see us arrive, and I could perceive many a longing and eager gaze cast upon the well filled bales, as our mules swung their little bodies through the camp. My companion, Mr. N., had become

so exceedingly thin that I should scarcely have known him; and upon my expressing surprise at the great change in his appearance, he heaved a sigh of inanity, and remarked that I "would have been as thin as he if I had lived on old *Ephraim* for two weeks, and short allowance of that." I found, in truth, that the whole camp had been subsisting, during our absence, on little else than two or three grizzly bears which had been killed in the neighborhood; and with a complacent glance at my own rotund and *cow-fed* person, I wished my *poor* friend better luck for the future.

We found Mr. McKay's company encamped on the bank of the river within a few hundred yards of our tents. It consists of thirty men, thirteen of whom are Indians, Nez Percés, Chinooks and Kayouse,<sup>53</sup> with a few squaws. The remainder are French-Canadians, and half-breeds. Their lodges,—of which there are several,—are of a conical form, composed of ten long poles, the lower ends of which are pointed and driven into the ground; the upper blunt, and drawn together at the top by thongs. Around these poles, several dressed buffalo skins, sewed together, are stretched, a hole being left on one side for entrance.

These are the kind of lodges universally used by the mountain [105] Indians while travelling: they are very comfortable and commodious, and a squaw accustomed to it, will erect and prepare one for the reception of her husband, while he is removing the trapping, from his horse. I have seen an expert Indian woman stretch a lodge in half the time that was required by four white men to perform the same operation with another in the neighborhood.

At the fort, affairs look prosperous: the stockade is finished; two bastions have been erected, and the work is singularly good, considering the scarcity of proper build-

<sup>53</sup> For the Chinook, see Franchère's *Narrative* in our volume vi, p. 240, note 40; for the Cayuse, Ross's *Oregon Settlers*, our volume vii, p. 137, note 37.—ED.

ing tools. The house will now soon be habitable, and the structure can then be completed at leisure by men who will be left here in charge, while the party travels on to its destination, the Columbia.

On the evening of the 26th, Captain W., Mr. Nuttall and myself supped with Mr. McKay in his lodge. I am much pleased with this gentleman: he unites the free, frank and open manners of the mountain man, with the grace and affability of the Frenchman. But above all, I admire the order, decorum, and strict subordination which exists among his men, so different from what I have been accustomed to see in parties composed of Americans. Mr. McKay assures me that he had considerable difficulty in bringing his men to the state in which they now are. The free and fearless Indian was particularly difficult to subdue; but steady, determined perseverance, and bold measures, aided by a rigid self-example, made them as clay in his hand, and has finally reduced them to their present admirable condition. If they misbehaved, a commensurate punishment is sure to follow: in extreme cases, flagellation is resorted to, but it is inflicted only by the hand of the Captain; were any other appointed to perform this office *on an Indian*, the indignity would be deemed so great, that nothing less than the blood of the individual could appease the wounded feelings of the savage.

[106] After supper was concluded, we sat ourselves down on a buffalo robe at the entrance of the lodge, to see the Indians at their devotions. The whole thirteen were soon collected at the call of one whom they had chosen for their chief, and seated with sober, sedate countenances around a large fire. After remaining in perfect silence for perhaps fifteen minutes, the chief commenced an harangue in a solemn and impressive tone, reminding them of the object for which they were thus assembled, that of wor-

shipping the "Great Spirit who made the light and the darkness, the fire and the water," and assured them that if they offered up their prayers to him with but "one tongue," they would certainly be accepted. He then rose from his squatting position to his knees, and his example was followed by all the others. In this situation he commenced a prayer, consisting of short sentences uttered rapidly but with great apparent fervor, his hands clasped upon his breast, and his eyes cast upwards with a beseeching look towards heaven. At the conclusion of each sentence, a choral response of a few words was made, accompanied frequently by low moaning. The prayer lasted about twenty minutes. After its conclusion, the chief, still maintaining the same position of his body and hands, but with his head bent to his breast, commenced a kind of psalm or sacred song, in which the whole company presently joined. The song was a simple expression of a few sounds, no intelligible words being uttered. It resembled the words, *Ho-hă-ho-hă-ho-hă-hă-ã*, commencing in a low tone, and gradually swelling to a full, round, and beautifully modulated chorus. During the song, the clasped hands of the worshippers were moved rapidly across the breast, and their bodies swung with great energy to the time of the music. The chief ended the song that he had commenced, by a kind of swelling groan, which was echoed in chorus. It was then taken up by another, and the same routine was gone [107] through. The whole ceremony occupied perhaps one and a half hours; a short silence then succeeded, after which each Indian rose from the ground, and disappeared in the darkness with a step noiseless as that of a spectre.

I think I never was more gratified by any exhibition in my life. The humble, subdued, and beseeching looks of the poor untutored beings who were calling upon their heavenly father

to forgive their sins, and continue his mercies to them, and the evident and heart-felt sincerity which characterized the whole scene, was truly affecting, and very impressive.

The next day being the Sabbath, our good missionary, Mr. Jason Lee, was requested to hold a meeting, with which he obligingly complied. A convenient, shady spot was selected in the forest adjacent, and the greater part of our men, as well as the whole of Mr. McKay's company, including the Indians, attended. The usual forms of the Methodist service, (to which Mr. L. is attached,) were gone through, and were followed by a brief, but excellent and appropriate exhortation by that gentleman. The people were remarkably quiet and attentive, and the Indians sat upon the ground like statues. Although not one of them could understand a word that was said, they nevertheless maintained the most strict and decorous silence, kneeling when the preacher kneeled, and rising when he rose, evidently with a view of paying him and us a suitable respect, however much their own notions as to the proper and most acceptable forms of worship, might have been opposed to ours.

A meeting for worship in the Rocky mountains is almost as unusual as the appearance of a herd of buffalo in the settlements. A sermon was perhaps never preached here before; but for myself, I really enjoyed the whole scene; it possessed the charm [108] of novelty, to say nothing of the salutary effect which I sincerely hope it may produce.

Mr. Lee is a great favorite with the men, deservedly so, and there are probably few persons to whose preaching they would have listened with so much complaisance. I have often been amused and pleased by Mr. L.'s manner of reproofing them for the coarseness and profanity of expression which is so universal amongst them. The reproof, although decided, clear, and strong, is always

characterized by the mildness and affectionate manner peculiar to the man; and although the good effect of the advice may not be discernible, yet it is always treated with respect, and its utility acknowledged.

In the evening, a fatal accident happened to a Canadian belonging to Mr. McKay's party. He was running his horse, in company with another, when the animals were met in full career by a third rider, and horses and men were thrown with great force to the ground. The Canadian was taken up completely senseless, and brought to Mr. McKay's lodge, where we were all taking supper. I perceived at once that there was little chance of his life being saved. He had received an injury of the head which had evidently caused concussion of the brain. He was bled copiously, and various local remedies were applied, but without success; the poor man died early next morning.

He was about forty years of age, healthy, active, and shrewd, and very much valued by Mr. McKay as a leader in his absence, and as an interpreter among the Indians of the Columbia.

At noon the body was interred. It was wrapped in a piece of coarse linen, over which was sewed a buffalo robe. The spot selected, was about a hundred yards south of the fort, and the funeral was attended by the greater part of the men of both camps. Mr. Lee officiated in performing the ordinary church [109] ceremony, after which a hymn for the repose of the soul of the departed, was sung by the Canadians present. The grave is surrounded by a neat palisade of willows, with a black cross erected at the head, on which is carved the name "*Casseau*." <sup>54</sup>

---

<sup>54</sup> According to Wyeth's journal his name was Kanseau, and the services were Protestant, Catholic, and Indian — "as he had an Indian family; he at least was well buried." — Ed.

## [110] CHAPTER VII

Departure of Mr. McKay's party, Captain Stewart, and the missionaries — Debauch at the fort — Departure of the company — Poor provision — Blackfeet hunting ground — A toilsome journey, and sufferings from thirst — Goddin's creek — Antoine Goddin, the trapper — Scarcity of game — A buffalo — Rugged mountains — Comforting reflections of the traveller — More game — Unusual economy — Habits of the white wolf — "Thornburg's pass" — Difficult travelling — The captain in jeopardy among the snow — A countermarch — Deserted Banneck camp — Toilsome and dangerous passage of the mountain — Mallade river — Beaver dams, and beaver — A party of Snake Indians — Scarcity of pasture — Another Banneck camp — "Kamas prairie" — Indian mode of preparing the kamas — Racine blanc, or biscuit root — Travelling over the hills — Loss of horses by fatigue — Boisé or Big-wood river — Salmon — Choke-cherries, &c.

ON the 30th of July, Mr. McKay and his party left us for Fort Vancouver, Captain Stewart and our band of missionaries accompanying them. The object of the latter in leaving us, is, that they may have an opportunity of travelling more slowly than we should do, on account, and for the benefit of the horned cattle which they are driving to the lower country. We feel quite sad in the prospect of parting from those with whom we have endured some toil and danger, and who have been to some of us as brothers, throughout our tedious journey; but, if no unforeseen accident occurs, we hope to meet them all again at Walla-Walla, the upper fort on the Columbia. As the party rode off, we fired three rounds, which were promptly answered, and three times three cheers wished the travellers success.

*August 5th.*— At sunrise this morning, the "star-spangled banner" was raised on the flag-staff at the fort, and a salute [111] fired by the men, who, according to orders, assembled around it. All in camp were then allowed the free and

uncontrolled use of liquor, and, as usual, the consequence was a scene of rioting, noise, and fighting, during the whole day; some became so drunk that their senses fled them entirely, and they were therefore harmless; but by far the greater number were just sufficiently under the influence of the vile trash, to render them in their conduct disgusting and tiger-like. We had "gouging," biting, fisticuffing, and "stamping" in the most "scientific" perfection; some even fired guns and pistols at each other, but these weapons were mostly harmless in the unsteady hands which employed them. Such scenes I hope never to witness again; they are absolutely sickening, and cause us to look upon our species with abhorrence and loathing. Night at last came, and cast her mantle over our besotted camp; the revel was over, and the men retired to their pallets peaceably, but not a few of them will bear palpable evidence of the debauch of the 5th of August.

The next morning we commenced packing, and at 11 o'clock bade adieu to "Fort Hall."<sup>55</sup> Our company now consists of but thirty men, several Indian women, and one hundred and sixteen horses. We crossed the main Snake or Shoshoné river, at a point about three miles from the fort. It is here as wide as the Missouri at Independence, but, beyond comparison, clearer and more beautiful.

Immediately on crossing the river, we entered upon a wide, sandy plain, thickly covered with wormwood, and early in the afternoon, encamped at the head of a delightful spring, about ten miles from our starting place.

On the route, our hunters killed a young grizzly bear, which, with a few grouse, made us an excellent dinner.

---

<sup>55</sup> Upon leaving Fort Hall, the usual trail followed the valley of the Lewis (or Snake) to Fort Boise. Wyeth, however, struck directly northwest across the Snake River Desert, past the Three Buttes. Godin's Creek was what is now known as Lost River, from having no outlet.—ED.

Fresh meat is now very grateful to our palates, as we have been living for weeks past on nothing but poor, dried buffalo, the better, and [112] far the larger part, having been deposited in the fort for the subsistence of the men who remain. We have no flour, nor vegetables of any kind, and our meat may be aptly compared to dry chips, breaking short off in our fingers; and when boiled to soften it a little, and render it fit for mastication, not a star appears in the pot. It seems astonishing that life can be sustained upon such miserable fare, and yet our men (except when under the influence of liquor) have never murmured, but have always eaten their crusty meal, and drunk their cold water with light and excellent spirits. We hope soon to fall in with the buffalo, and we shall then endeavor to prepare some good provision to serve until we reach the salmon region.

We shall now, for about ten days, be travelling through the most dangerous country west of the mountains, the regular hunting ground of the Blackfeet Indians, who are said to be often seen here in parties of hundreds, or even thousands, scouring the plains in pursuit of the buffalo. Traders, therefore, seldom travel this route without meeting them, and being compelled to prove their valor upon them: the white men are, however, generally the victors, although their numbers are always vastly inferior.

*7th.*— We were moving this morning with the dawn, and travelled steadily the whole day, over one of the most arid plains we have seen, covered thickly with jagged masses of lava, and twisted wormwood bushes. Both horses and men were jaded to the last degree: the former from the rough, and at times almost impassable nature of the track, and the latter from excessive heat and parching thirst. We saw not a drop of water during the day, and our only food was the dried meat before spoken of,

which we carried, and chewed like biscuits as we travelled. There are two reasons by which the extreme thirst which the way-farer suffers in these regions, may be accounted [113] for; first, the intense heat of the sun upon the open and exposed plains; and secondly, the desiccation to which every thing here is subject. The air feels like the breath of a sirocco, the tongue becomes parched and horny, and the mouth, nose, and eyes are incessantly assailed by the fine pulverized lava, which rises from the ground with the least breath of air. Bullets, pebbles of chalcedony, and pieces of smooth obsidian, were in great requisition to-day: almost every man was mumbling some of these substances, in an endeavor to assuage his burning thirst. The camp trailed along in a lagging and desponding line over the plain for a mile or more, the poor horses' heads hanging low, their tongues protruding to their utmost extent, and their riders scarcely less drooping and spiritless. We were a sad and most forlorn looking company, certainly: not a man of us had any thing to say, and none cared to be interrupted in his blissful dream of cool rivers and streams. Occasionally we would pass a ravine or gorge in the hills, by which one side of the plain was bounded, and up this some of the men would steer, leaping over blocks of lava, and breaking a path through the dense bushes: but the poor searcher soon returned, disheartened and wo-begone, and those who had waited anxiously to hear his cheering call, announcing success, passed onward without a word. One of our men, a mulatto, after failing in a forage of this sort, cast himself resolutely from his horse to the ground, and declared that he would lie there till he died: "there was no water in the cursed country and he might as well die here as go farther." Some of us tried to infuse a little courage into him, but it proved of no avail, and each was too much occupied with his own

particular grief to use his tongue much in persuasion; so we left him to his fate.

Soon after night-fall, some signs of water were seen in a small valley to our left, and, upon ascending it, the foremost of the party found a delightful little cold spring; but they soon exhausted [114] it, and then commenced, with axes and knives, to dig it out and enlarge it. By the time that Mr. N., and myself arrived, they had excavated a large space which was filled to overflowing with muddy water. We did not wait for it to settle, however, but throwing ourselves flat upon the ground, drank until we were ready to burst. The tales which I had read of suffering travellers in the Arabian deserts, then recurred with some force to my recollection, and I thought I could,—though in a very small measure,—appreciate their sufferings by deprivation, and their unmingled delight and satisfaction in the opportunity of assuaging them.

Poor Jim, the mulatto man, was found by one of the people, who went back in search of him, lying where he had first fallen, and either in a real or pretended swoon, still obstinate about dying, and scarcely heeding the assurances of the other that water was within a mile of him. He was, however, at length dragged and carried into camp, and soused head foremost into the mud puddle, where he guzzled and guzzled until his eyes seemed ready to burst from his head, and he was lifted out and laid dripping and flaccid upon the ground.

The next morning we made an early start towards a range of willows which we could distinctly see, at the distance of fifteen or twenty miles, and which we knew indicated Goddin's creek, so called from a Canadian of that name who was killed in this vicinity by the Blackfeet. Goddin's son, a half-breed, is now with us as a trapper; he is a fine sturdy fellow, and of such strength of limb and

wind, that he is said to be able to run down a buffalo on foot, and kill him with arrows.

Goddin's creek was at length gained, and after travelling a few miles along its bank we encamped in some excellent pasture. Our poor horses seemed inclined to make up for lost time here, as yesterday their only food was the straggling blades of a little [115] dry and parched grass growing among the wormwood on the hills.

We have been considerably disappointed in not seeing any buffalo to-day, and their absence here has occasioned some fear that we may not meet with them on our route. Should this be the case, we shall have to depend upon such small game, hares, grouse, &c., as may happen to lie in our path. In a short time, however, even this resource will fail; and if we do not happen to see Indians on the upper waters of the Columbia, from whom we can purchase dried salmon, we shall be under the necessity of killing our horses for food.

We perhaps derive one advantage, however, from the absence of game here, — that of there being less probability of lurking Blackfeet in the vicinity; but this circumstance, convenient as it is, does not compensate for empty stomachs, and I believe the men would rather fight for the privilege of obtaining food, than live without it.

The next morning we left Goddin's creek, and travelled for ten miles over a plain, covered as usual with wormwood bushes and lava. Early in the day, the welcome cry of "a buffalo! a buffalo!" was heard from the head of the company, and was echoed joyfully along the whole line. At the moment, a fine large bull was seen to bound from the bushes in our front, and tear off with all his speed over the plain. Several hunters gave him chase immediately, and in a few minutes we heard the guns that proclaimed his death. The killing of this animal is a most

fortunate circumstance for us: his meat will probably sustain us for three or four days, and by that time we are sanguine of procuring other provision. The appearance of this buffalo is not considered indicative of the vicinity of others: he is probably a straggler from a traveling band, and has been unable to proceed with it, in consequence of sickness or wounds.

[116] On leaving the plain this morning, we struck into a defile between some of the highest mountains we have yet seen. In a short time we commenced ascending, and continued passing over them, until late in the afternoon, when we reached a plain about a mile in width, covered with excellent grass, and a delightful cool stream flowing through the middle of it. Here we encamped, having travelled twenty-seven miles.

Our journey, to-day, has been particularly laborious. We were engaged for several hours, constantly in ascending and descending enormous rocky hills, with scarcely the sign of a valley between them; and some of them so steep, that our horses were frequently in great danger of falling, by making a mis-step on the loose, rolling stones. I thought the Black Hills, on the Platte, rugged and difficult of passage, but they sink into insignificance when compared with these.<sup>56</sup>

We observed, on these mountains, large masses of greenstone, and beautiful pebbles of chalcedony and fine agate; the summits of the highest are covered with snow. In the mountain passes, we found an abundance of large, yellow currants, rather acid, but exceedingly palatable to men who have been long living on animal food exclusively. We all ate heartily of them; indeed, some of our

---

<sup>56</sup> These mountains — in Custer County, Idaho, between the different branches of Lost River — have apparently no local name that has been cartographically recorded; they lie between the Sawtooth and Lost River ranges.— ED.

people became so much attached to the bushes, that we had considerable difficulty to induce them to travel again.

10th.— We commenced our march at seven this morning, proceeding up a narrow valley, bordering our encampment in a north-easterly direction. The ravine soon widened, until it became a broad, level plain, covered by the eternal “sage” bushes, but was much less stony than usual. About mid-day, we left the plain, and shaped our course over a spur of one of the large mountains; then taking a ravine, in about an hour we came to the level land, and struck Goddin's creek again, late in the afternoon.

Our provision was all exhausted at breakfast, this morning, [117] (most of our bull meat having been given to a band of ten trappers, who left us yesterday,) we had seen no game on our route, and we were therefore preparing ourselves to retire supperless to our pallets, when Richardson and Sansbury were descried approaching the camp and, to our great comfort, we observed that they had meat on their saddles. When they arrived, however, we were somewhat disappointed to find that they had only killed a calf, but they had brought the entire little animal with them, the time for picking and choosing of choice pieces having passed with us; and after making a hearty meal, we wrapped ourselves in our blankets and slept soundly. Although but a scant breakfast was left for us in the morning, and we knew not if any dinner would fall in our way, yet “none of these things moved us;” we lived altogether upon the present, and heeded not the future. We had always been provided for; often, when we had despaired of procuring sustenance, and when the pangs of hunger had soured our temper, and made us quarrelsome, when we thought there was no prospect before us but to sacrifice our valuable horses, or die of starvation, have the

means been provided for our relief. A buffalo, an elk, or an antelope, has appeared like the goat provided for the faithful Abraham, to save a more valuable life, and I hope that some of us have been willing, reverently to acknowledge from whom these benefits and blessings have been received.

On the day following, Richardson killed two buffalo, and brought his horse heavily laden with meat to the camp. Our good hunter walked himself, that the animal might be able to bear the greater burthen. After depositing the meat in the camp, he took a fresh horse, and accompanied by three men, returned to the spot where the game had been killed, (about four miles distant,) and in the evening, brought in every pound of it, leaving only the heavier bones. The wolves will be disappointed this evening; they are accustomed to dainty picking when they [118] glean after the hunters, but we have now abandoned the "wasty ways" which so disgraced us when game was abundant; the despised leg bone, which was wont to be thrown aside with such contempt, is now polished of every tendon of its covering, and the savory hump is used as a kind of *dessert* after a meal of coarser meat.

Speaking of wolves, I have often been surprised at the perseverance and tenacity with which these animals will sometimes follow the hunter for a whole day, to feed upon the carcass he may leave behind him. When an animal is killed, they seem to mark the operation, and stand still at a most respectful distance, with drooping tail and ears, as though perfectly indifferent to the matter in progress. Thus will they stand until the game is butchered, the meat placed upon the saddle, and the hunter is mounted and on his way; then, if he glances behind him, he will see the wily forager stealthily crawling and prowling along towards the smoking remains, and pouncing upon it, and

tearing it with tooth and nail, immediately as he gets out of reach.

During the day, the wolves are shy, and rarely permit an approach to within gun-shot; but at night, (where game is abundant,) they are so fearless as to come quite within the purlieus of the camp, and there sit, a dozen together, and howl hideously for hours. This kind of serenading, it may be supposed, is not the most agreeable; and many a time when on guard, have I observed the unquiet tossing of the bundles of blankets near me, and heard issue from them, the low, husky voice of some disturbed sleeper, denouncing heavy anathemas on the unseasonable music.

12th.—We shaped our course, this morning, towards what appeared to us a gap in a high and rugged mountain, about twenty miles ahead. After proceeding eight or ten miles, the character of the country underwent a remarkable and sudden change. Instead of the luxuriant sage bushes, by which the [119] whole plains have hitherto been covered, and the compact and dense growth of willows which has uniformly fringed every stream and rivulet, the ground was completely denuded; not a single shrub was to be seen, nor the smallest appearance of vegetation, except in small patches near the water. The mountains, also, which had generally been rocky, and covered with low, tangled bushes, here abound in beautiful and shapely pine trees. Some of the higher peaks are, however, completely bare, and capped with enormous masses of snow.

After we had travelled about twelve miles, we entered a defile between the mountains, about five hundred yards wide, covered, like the surrounding country, with pines; and, as we proceeded, the timber grew so closely, added to a thick undergrowth of bushes, that it appeared almost impossible to proceed with our horses. The farther we advanced, the more our difficulties seemed to increase;

obstacles of various kinds impeded our progress; — fallen trees. their branches tangled and matted together, large rocks and deep ravines, holes in the ground, into which our animals would be precipitated without the possibility of avoiding them. and an hundred other difficulties which beggar description.

We travelled for six miles through such a region as I have attempted to describe, and at 2 o'clock encamped in a clear spot of ground, where we found excellent grass, and a cold. rapid stream. Soon after we stopped, Captain W. and Richardson left us. to look for a pass through the mountains, or for a spot where it would be possible to cross them. Strange as it may appear, yet in this desolate and almost impassable region we have observed, to-day, the tracks of a buffalo which must have passed here last night. or this morning; at least so our hunters say, and they are rarely deceived in such matters.

Captain W. and Richardson returned early next morning, with the mortifying intelligence that no practicable pass through the [120] mountain could be found. They ascended to the very summit of one of the highest peaks, above the snow and the reach of vegetation, and the only prospect which they had beyond, was a confused mass of huge angular rocks, over which even a wild goat could scarcely have made his way. Although they utterly failed in the object of their exploration, yet they were so fortunate as to kill a buffalo, (*the* buffalo,) the meat of which they brought on their horses.

Wyeth told us of a narrow escape he had while travelling on foot near the summit of one of the peaks. He was walking on a ridge which sloped from the top at an angle of about forty degrees, and terminated, at its lower part, in a perpendicular precipice of a thousand or twelve hundred feet. He was moving along in the snow cautiously,

near the lower edge, in order to attain a more level spot beyond, when his feet slipped and he fell. Before he could attempt to fix himself firmly, he slid down the declivity till within a few feet of the frightful precipice. At the instant of his fall, he had the presence of mind to plant the rifle which he held in one hand, and his knife which he drew from the scabbard with the other, into the snow, and as he almost tottered on the verge, he succeeded in checking himself, and holding his body perfectly still. He then gradually moved, first the rifle and then the knife, backward up the slanting hill behind him, and fixing them firmly, drew up his body parallel to them. In this way he moved slowly and surely until he had gained his former station, when, without further difficulty, he succeeded in reaching the more level land.

After a good breakfast, we packed our horses, and struck back on our trail of yesterday, in order to try another valley which we observed bearing parallel with this, at about three miles distant, and which we conclude must of course furnish a path through the mountain. Although our difficulties in returning by the same wretched route were very considerable, yet they were [121] somewhat diminished by the road having been partially broken, and we were enabled also to avoid many of the sloughs and pitfalls which had before so much incommoded us. We have named this rugged valley, "Thornburg's *pass*," after one of our men of this name. (a tailor,) whom we have to thank for leading us into all these troubles. Thornburg crossed this mountain two years ago, and might therefore be expected to know something of the route, and as he was the only man in the company who had been here. Captain W. acted by his advice, in opposition to his own judgment, which had suggested the other valley as affording a more probable chance of success. As we are prob-

ably the only white men who have ever penetrated into this most vile and abominable region, we conclude that the name we have given it must stand, from priority.<sup>57</sup>

In the bushes, along the stream in this valley, the black-tailed deer (*Cervus macrourus*) is abundant. The beautiful creatures frequently bounded from their cover within a few yards of us, and trotted on before us like domestic animals; "they are so unacquainted with man" and his cruel arts, that they seem not to fear him.

We at length arrived on the open plain again, and in our route towards the other valley, we came to a large, recent Indian encampment, probably of Bannecks,<sup>58</sup> who are travelling down to [122] the fisheries on Snake river. We here took their trail which led up the valley to which we had been steering. The entrance was very similar in appearance to that of Thornburg's pass, and it is therefore not very surprising that our guide should have been deceived. We travelled rapidly along the level land at the base of the mountain, for about three miles; we then began to ascend, and our progress was necessarily slow and tedious. The commencement of the Alpine path was, however, far better than we had

---

<sup>57</sup> The expedition apparently followed the east fork of Lost River, into a maze of mountains known locally as the "Devil's Bedstead."—ED.

<sup>58</sup> We afterwards learned, that only three days before our arrival, a hard contested, and most sanguinary battle, had been fought on this spot, between the Bannecks and Blackfeet, in which the former gained a signal and most complete victory, killing upwards of forty of their adversaries, and taking about three dozen scalps. The Blackfeet, although much the larger party, were on foot, but the Bannecks, being all well mounted, had a very decided advantage; and the contest occurring on an open plain, where there was no chance of cover, the Blackfeet were run down with horses, and, without being able to load their guns, were trampled to death, or killed with salmon spears and axes.

This was not the first time that we narrowly escaped a contest with this savage and most dreaded tribe. If we had passed there but a few days earlier, there is every probability to suppose that we should have been attacked, as our party at that time consisted of but twenty-six men.—TOWNSEND.

expected, and we entertained the hope that the passage could be made without difficulty or much toil, but the farther we progressed, the more laborious the travelling became. Sometimes we mounted steep banks of intermingled flinty rock, and friable slate, where our horses could scarcely obtain a footing, frequently sliding down several feet on the loose, broken stones:— again we passed along the extreme verge of tremendous precipices at a giddy height, whereat almost every step the stones and earth would roll from under our horses' feet, and we could hear them strike with a dull, leaden sound on the craggy rocks below. The whole journey, to-day, from the time we arrived at the heights, until we had crossed the mountain, has been a most fearful one. For myself, I might have diminished the danger very considerably, by adopting the plan pursued by the rest of the company, that of walking, and leading my horse over the most dangerous places, but I have been suffering for several days with a lame foot, and am wholly incapable of such exertion. I soon discovered that an attempt to guide my horse over the most rugged and steepest ranges was worse than useless, so I dropped the rein upon the animal's neck, and allowed him to take his own course, closing my eyes, and keeping as quiet as possible in the saddle. But I could not forbear [123] starting occasionally, when the feet of my horse would slip on a stone, and one side of him would slide rapidly towards the edge of the precipice, but I always recovered myself by a desperate effort, and it was fortunate for me that I did so.

Late in the afternoon, we completed the passage across the mountain, and with thankful hearts, again trod the level land. We entered here a fine rich valley or plain, of about half a mile in width, between two ranges of the mountain. It was profusely covered with willow, and

through the middle of it, ran a rapid and turbulent mountain torrent, called Mallade river.<sup>59</sup> It contains a great abundance of beaver, their recent dams being seen in great numbers, and in the night, when all was quiet, we could hear the playful animals at their gambols, diving from the shore into the water, and striking the surface with their broad tails. The sound, altogether, was not unlike that of children at play, and the animated description of a somewhat similar scene, in the "Mohicans," recurred to my recollection, where the single-minded Gamut is contemplating with feelings of strong reprobation, the wayward freaks of what he supposes to be a bevy of young savages.

14th.—We travelled down the Mallade river,<sup>60</sup> and followed the Indian trail through the valley. The path frequently passed along near the base of the mountain, and then wound its way a considerable distance up it, to avoid rocky impediments and thick tangled bushes below, so that we had some climbing to do; but the difficulties and perils of the route of yesterday are still so fresh in our memory, that all minor things are disregarded, at least by *us*. Our poor horses, however, no doubt feel differently, as they are very tired and foot sore.

The next day we came to a close and almost impenetrable thicket of tangled willows, through which we had

---

<sup>59</sup> According to Wyeth's account, the expedition retraced their steps to the forks of the river, then followed the south branch, passing over the mountains which form the boundary between Custer and Blaine counties, Idaho, and emerging on Trail Creek, the affluent of the Malade, which joins the main stream at Ketchum, the present terminus of the Wood River branch of the Oregon Short Line railway.—ED.

<sup>60</sup> Malade (or Wood) River is a northern tributary of Lewis in Blaine County, Idaho. The mining town of Hailey is upon its banks. It was named Rivière des Malades (Sick Men's River) by Alexander Ross, who trapped upon it in 1824, and whose men fell ill from eating beaver that had fed upon a poisonous root. See Ross, *Fur Hunters* (London, 1855), ii, pp. 114-116.—ED.

great difficulty in urging our horses. The breadth of the thicket was [124] about one hundred yards, and a full hour was consumed in passing through it. We then entered immediately a rich and beautiful valley, covered profusely with a splendid blue Lupin. The mountains on either side are of much less height than those we have passed, and entirely bare, the pine trees which generally cover and ornament them, having disappeared. During the morning, we ascended and descended several high and stony hills, and early in the afternoon, emerged upon a large, level prairie, and struck a branch of Mallade river, where we encamped.

While we were unloading, we observed a number of Indians ahead, and not being aware of their character, stood with our horses saddled, while Captain W. and Richardson rode out to reconnoitre. In about half an hour they returned, and informed us that they were *Snakes* who were returning from the fisheries, and travelling towards the buffalo on the "big river," (Shoshoné.) We therefore unsaddled our poor jaded horses and turned them out to feed upon the luxuriant pasture around the camp, while we, almost equally jaded, threw ourselves down in our blankets to seek a little repose and quiet after the toils and fatigues of a long day's march.

Soon after we encamped, the Snake chief and two of his young men visited us. We formed a circle around our lodge and smoked the pipe of peace with them, after which we made them each a present of a yard of scarlet cloth for leggings, some balls and powder, a knife, and a looking glass. Captain W. then asked them a number of questions, through an interpreter, relative to the route, the fishery, &c. &c.,— and finally bought of them a small quantity of dried salmon, and a little fermented kamas or *quamash* root. The Indians remained with us until

dark, and then left us quietly for their own camp. There are two lodges of them, in all about twenty persons, but none of them presumed to come near us, with the exception of the three men, two [125] squaws, and a few children. The chief is a man about fifty years of age, tall, and dignified looking, with large, strong aqualine features. His manners were cordial and agreeable, perhaps remarkably so, and he exhibited very little of that stoical indifference to surrounding objects which is so characteristic of an Indian. His dress consisted of plain leggings of deer skin, fringed at the sides, unembroidered moccasins, and a *marro* or waist-covering of antelope skin dressed without removing the hair. The upper part of his person was simply covered with a small blanket, and his ears were profusely ornamented with brass rings and beads. The men and squaws who accompanied him, were entirely naked, except that the latter had *marro's* of deer skin covering the loins.

The next morning we steered west across the wide prairie, crossing within every mile or two, a branch of the tortuous Mallade, near each of which good pasture was seen; but on the main prairie scarcely a blade of grass could be found, it having lately been fired by the Indians to improve the crops of next year. We have seen to-day some lava and basalt again on the sides of the hills, and on the mounds in the plain, but the level land was entirely free from it.

At noon on the 17th, we passed a deserted Indian camp, probably of the same people whose trail we have been following. There were many evident signs of the Indians having but recently left it, among which was that of several white wolves lurking around in the hope of finding remnants of meat, but, as a Scotchman would say, "I doubt they were mistaken," for meat is scarce here, and the frugal Indians rarely leave enough behind them to excite

even the famished stomach of the lank and hungry wolf. The encampment here has been but a temporary one, occupying a little valley densely overgrown with willows, the tops of which have been bent over, and tied so as to form a sort of lodge; over these, they have probably stretched deer [126] skins or blankets, to exclude the rays of the sun. Of these lodges there are about forty in the valley, so that the party must have been a large one.

In the afternoon we arrived at "*Kamas prairie*," so called from a vast abundance of this esculent root which it produces, (the *Kamassa esculenta*, of Nuttall.)<sup>61</sup> The plain is a beautiful level one of about a mile over, hemmed in by low, rocky hills, and in spring, the pretty blue flowers of the Kamas are said to give it a peculiar, and very pleasing appearance. At this season, the flowers do not appear, the vegetable being indicated only by little dry stems which protrude all over the ground among the grass.

We encamped here, near a small branch of Mallade river; and soon after, all hands took their kettles and scattered over the prairie to dig a mess of kamas. We were, of course, eminently successful, and were furnished thereby with an excellent and wholesome meal. When boiled, this little root is palatable, and somewhat resembles the taste of the common potato; the Indian mode of preparing it, is, however, the best — that of fermenting it in pits under ground, into which hot stones have been placed. It is suffered to remain in these pits for several days; and when removed, is of a dark brown color, about the consistence of softened glue, and sweet, like molasses. It is then often made into large cakes, by being mashed, and pressed

---

<sup>61</sup> After crossing the Malade, the expedition moved along one of its several western branches until reaching Camas Prairie, in Elmore County.

Camas (quamash) is a bulbous root much used for food by the Indians of the Columbia. Its Shoshoni name is passheco. For further description consult Thwaites, *Original Journals of the Lewis and Clark Expedition*, iii, p.78.—ED.

together, and slightly baked in the sun. There are several other kinds of bulbous and tuberous roots, growing in these plains, which are eaten by the Indians, after undergoing a certain process of fermentation or baking. Among these, that which is most esteemed, is the white or biscuit root, the *Racine blanc* of the Canadians,—(*Eulophus ambiguus*, of Nuttall.) This is dried, pulverized with stones, and after being moistened with water, is made into cakes and baked in the sun. The taste is not unlike that of a stale [127] biscuit, and to a hungry man, or one who has long subsisted without vegetables of any kind, is rather palatable.<sup>62</sup>

On the morning of the 18th, we commenced ascending the hills again, and had a laborious and toilsome day's march. One of our poor wearied horses gave up, and stopped; kicking, and cuffing, and beating had no effect to make him move; the poor animal laid himself down with his load, and after this was detached and shifted to the back of another, we left him where he fell, to recruit, and fall into the hands of the Indians, or die among the arid hills. This is the first horse we have lost in this manner; but we have great fears that many others will soon fail, as their riders and drivers are compelled to use the whip constantly, to make them walk at the slowest gait. We comfort ourselves, however, by supposing that we have now nearly passed the most rugged country on the route, and hope, before many days, to reach the valley of the Shoshoné, where the country will be level, and the pasture good. We are anxious, also, to fall in with the Snake Indians, in order to get a supply of salmon, as we have been living for several days on a short allowance of wretched,

---

<sup>62</sup> This root is probably the one usually spoken of by the French-Canadian trappers as "white-apple" (*pomme blanche*), or "swan-apple," and well known to scientists as *Psoralea esculenta*.—ED.

dry meat, and this poor pittance is now almost exhausted.

19th.— This morning was cold, the thermometer stood at 28°, and a thick skim of ice was in the camp kettles at sunrise. Another hard day's travel over the hills, during which we lost two of our largest and stoutest horses. Towards evening, we descended to a fine large plain, and struck *Boiséé*, or Big Wood river, on the borders of which we encamped.<sup>63</sup> This is a beautiful stream, about one hundred yards in width, clear as crystal, and, in some parts, probably twenty feet deep. It is literally *crowded* with salmon, which are springing from the water almost constantly. Our mouths are watering most abundantly for some of them, but we are not provided with suitable implements for [128] taking any, and must therefore depend for a supply on the Indians, whom we hope soon to meet.

We found, in the mountain passes, to-day, a considerable quantity of a small fruit called the choke-cherry, a species of prunus, growing on low bushes. When ripe, they are tolerable eating, somewhat astringent, however, producing upon the mouth the same effect, though in a less degree, as the unripe persimmon. They are now generally green, or we should feast luxuriantly upon them, and render more tolerable our miserable provision. We have seen, also, large patches of service bushes, but no fruit. It seems to have failed this year, although ordinarily so abundant that it constitutes a large portion of the vegetable food of both Indians and white trappers who visit these regions.

---

<sup>63</sup> Boise River is an important eastern affluent of Lewis, rising in the mountains of Blaine County, through which Townsend had just passed; it flows nearly west for about a hundred miles. Boise, the capital of Idaho, is upon its banks. Of the two forks which unite to form the main stream, Wyeth's expedition encountered the southern.— ED.

## [129] CHAPTER VIII

A substitute for game, and a luxurious breakfast — Expectations of a repast, and a disappointment — Visit of a Snake chief — his abhorrence of horse meat — A band of Snake Indians — their chief — Trade with Indians for salmon — Mr. Ashworth's adventure — An Indian horse-thief — Visit to the Snake camp — its filthiness — A Banneck camp — Supercilious conduct of the Indians — Arrival at Snake river — Equipment of a trapping party — Indian mode of catching salmon — Loss of a favorite horse — Powder river — Cut rocks — Recovery of the lost trail — Grand Ronde — Captain Bonneville — his fondness for a roving life — Kayouse and Nez Percé Indians — their appearance — An Indian Beauty — Blue mountains — A feline visit.

*August 20th.*— At about daylight this morning, having charge of the last guard of the night, I observed a beautiful, sleek little *colt*, of about four months old, trot into the camp, whinnying with great apparent pleasure, and dancing and curvetting gaily amongst our sober and sedate band. I had no doubt that he had strayed from Indians, who were probably in the neighborhood; but as here, every animal that comes near us is fair game, and as we were hungry, not having eaten any thing of consequence since yesterday morning, I thought the little stranger would make a good breakfast for us. Concluding, however, that it would be best to act advisedly in the matter, I put my head into Captain W.'s tent, and telling him the news, made the proposition which had occurred to me. The captain's reply was encouraging enough,—“ Down with him, if you please, Mr. T., it is the Lord's doing; let us have him for breakfast.” In five minutes afterwards, a bullet sealed the fate of the unfortunate visitor, and my men were set to work making fires, and rummaging [130] out the long-neglected stew-pans, while I engaged myself in flaying the little animal, and cutting up his body in readiness for the pots.

When the camp was aroused, about an hour after, the savory steam of the cookery was rising and saluting the nostrils of our hungry people with its fragrance, who, rubbing their hands with delight, sat themselves down upon the ground, waiting with what patience they might, for the unexpected repast which was preparing for them.

It was to me almost equal to a good breakfast, to witness the pleasure and satisfaction which I had been the means of diffusing through the camp.

The repast was ready at length, and we did full justice to it; every man ate until he was filled, and all pronounced it one of the most delicious meals they had ever assisted in demolishing. When our breakfast was concluded, but little of the colt remained; that little was, however, carefully packed up, and deposited on one of the horses, to furnish, at least, a portion of another meal.

The route, this morning, lay along Boisée. For an hour, the travelling was toilsome and difficult, the Indian trail, leading along the high bank of the river, steep and rocky, making our progress very slow and laborious. We then came to a wide plain, interrupted only by occasional high banks of earth, some of them of considerable extent, across which ran the path. Towards mid-day, we lost sight of these banks, the whole country appearing level, with the exception of some distant hills in the south-west, which we suppose indicate the vicinity of some part of Snake river.

We have all been disappointed in the distance to this river, and the length of time required to reach it. Not a man in our camp has ever travelled this route before, and all we have known about it has been the general course.

[131] In the afternoon, we observed a number of Indians on the opposite side of the river, engaged in fishing for salmon. Captain W. and two men immediately crossed

over to them, carrying with them a few small articles to exchange for fish. We congratulated ourselves upon our good fortune in seeing these Indians, and were anticipating a plentiful meal, when Captain W. and his companions returned, bringing only *three* small salmon. The Indians had been unsuccessful in fishing, not having caught enough for themselves, and even the offer of exorbitant sums was not sufficient to induce them to part with more.

In the afternoon, a grouse and a beaver were killed, which, added to the remains of the colt, and our three little salmon, made us a tolerable supper. While we were eating, we were visited by a Snake chief, a large and powerful man, of a peculiarly dignified aspect and manner. He was naked, with the exception of a small blanket which covered his shoulders, and descended to the middle of the back, being fastened around the neck with a silver skewer. As it was pudding time with us, our visitor was of course invited to sit and eat; and he, nothing loath, deposited himself at once upon the ground, and made a remarkably vigorous assault upon the mixed contents of the dish. He had not eaten long, however, before we perceived a sudden and inexplicable change in his countenance, which was instantly followed by a violent ejection of a huge mouthful of our luxurious fare. The man rose slowly, and with great dignity, to his feet, and pronouncing the single word "*shekum*," (horse,) in a tone of mingled anger and disgust, stalked rapidly out of the camp, not even wishing us a good evening. It struck me as a singular instance of accuracy and discrimination in the organs of taste. We had been eating of the multifarious compound without being able to recognize, by the taste, a single ingredient which it contained; a stranger came amongst us, who did not know, when he [132] commenced eating, that the dish was formed of more than one item,

and yet in less than five minutes he discovered one of the very least of its component parts.

It would seem from this circumstance that the Indians, or it may be the particular tribe to which this man belongs, are opposed to the eating of horse flesh, and yet, the natural supposition would be, that in the gameless country inhabited by them they would often be reduced to such shifts, and thus readily conquer any natural reluctance which they might feel to partake of such food. I did not think until after he left us, that if the chief knew how the horse meat he so much detested was procured, and where, he might probably have expressed even more indignation, for it is not at all unlikely that the colt had strayed from his own band.

21st.—The timber along the river banks is plentiful, and often attains a large size. It is chiefly of the species called balsam poplar, (*Populus balsamifera*.)

Towards noon to-day, we observed ahead several groups of Indians, perhaps twenty in each, and on the appearance of our cavalcade, they manifested their joy at seeing us, by the most extravagant and grotesque gestures, dancing and capering most ludicrously. Every individual of them was perfectly naked, with the exception of a small thong around the waist, to which was attached a square piece of flannel, skin, or canvass, depending half way to the knees. Their stature was rather below the middle height, but they were strongly built and very muscular. Each man carried his salmon spear, and these, with the knives stuck in their girdles, appeared to be their only weapons, not one of them having a gun. As we neared them, the first group ran towards us, crying "Shoshoné, Shoshoné," and caused some delay by their eagerness to grasp our hands and examine our garments. After one group had become satisfied with fingering [133] us, we rode on and

suffered the same process by the next, and so on until we had passed the whole, every Indian crying with a loud voice, "*Tabiboo sant, tabiboo sant!*" (white man is good, white man is good.)

In a short time the chief joined us, and our party stopped for an hour, and had a "talk" with him. He told us, in answer to our questions, that his people had fish, and would give them for our goods if we would sleep one night near their camp, and smoke with them. No trade, of consequence, can ever be effected with Indians, unless the pipe be first smoked, and the matter calmly and seriously deliberated upon. An Indian chief would think his dignity seriously compromised if he were expected to do *any thing* in a hurry, much less so serious a matter as a salmon or beaver trade; and if we had refused his offered terms, he would probably have allowed us to pass on, and denied himself the darling rings, bells, and paint, rather than infringe a custom so long religiously practised by his people. We were therefore inclined to humor our Snake friend, and accordingly came to a halt, on the bank of the river.

The chief and several of his favored young braves sat with us on the bank, and we smoked with them, the other Indians forming a large circle around.

The chief is a man rather above the ordinary height, with a fine, noble countenance, and remarkably large, prominent eyes. His person, instead of being naked, as is usual, is clothed in a robe made of the skin of the mountain sheep; a broad band made of large blue beads, is fastened to the top of his head, and hangs over on his cheeks, and around his neck is suspended the foot of a huge grizzly bear. The possession of this uncouth ornament is considered among them, a great honor, since none but those whose prowess has enabled them to kill the animal, are allowed to wear it, and with their weak and

inefficient weapons, [134] the destruction of so fierce and terrible a brute, is a feat that may well entitle them to some distinction.

We remained two hours at the spot where we halted, and then passed on about four miles, accompanied by the chief and his people, to their camp, where we pitched our tents for the night. In a short time the Indians came to us in great numbers, with bundles of dried salmon in their arms, and a few recent ones. We commenced our trading immediately, giving them in exchange, fish-hooks, beads, knives, paint, &c., and before evening, had procured sufficient provision for the consumption of our party until we arrive at the falls of Snake river, where we are told we shall meet the Bannecks, from whom we can doubtless trade a supply, which will serve us until we reach Walla-walla.

While we were pursuing our trade, Richardson and Mr. Ashworth rode into the camp, and I observed by the countenance of the latter, that something unusual had occurred. I felt very certain that no ordinary matter would be capable of ruffling this calm, intrepid, and almost fool-hardy young man; so it was with no little interest that I drew near, to listen to the tale which he told Captain W. with a face flushed with unusual anger, while his whole person seemed to swell with pride and disdain.

He said that while riding about five miles behind the party, (not being able to keep up with it on account of his having a worn out horse,) he was attacked by about fifty of the Indians whom we passed earlier in the day, dragged forcibly from his horse and thrown upon the ground. Here, some held their knives to his throat to prevent his rising, and others robbed him of his saddle bags, and all that they contained. While he was yet in this unpleasant situation, Richardson came suddenly upon them, and

the cowardly Indians released their captive instantly, throwing the saddle bags and every thing else upon the ground and flying like frightened antelopes over the plain. The only real damage that Mr. Ashworth sustained, was the total loss of his [135] saddle bags, which were cut to pieces by the knives of the Indians, in order to abstract the contents. These, however, we think he deserves to lose, inasmuch, as with all our persuasion, we have never been able to induce him to carry a gun since we left the country infested by the Blackfeet; and to-day, the very show of such a weapon would undoubtedly have prevented the attack of which he complains.

Richardson gives an amusing account of the deportment of our young English friend while he was lying under the knives of his captors. The heavy whip of buffalo hide, which was his only weapon, was applied with great energy to the naked backs and shoulders of the Indians, who winced and stamped under the infliction, but still feared to use their knives, except to prevent his rising. Richardson, says, that until he approached closely, the blows were descending in rapid succession, and our hunter was in some danger of losing his characteristic dignity in his efforts to repress a loud and hearty laugh at the extreme ludicrousness of the whole scene.

Captain W., when the circumstances of the assault were stated to him, gave an immediate order for the suspension of business, and calling the chief to him, told him seriously, that if an attempt were again made to interrupt any of his party on their march, the offenders should be tied to a tree and whipped severely. He enforced his language by gestures so expressive that none could misunderstand him, and he was answered by a low groan from the Indians present, and a submissive bowing of their heads. The chief appeared very much troubled, and harangued his

people for considerable time on the subject, repeating what the captain had said, with some additional remarks of his own, implying that even a worse fate than whipping would be the lot of future delinquents.

22d.—Last night during the second guard, while on my walk [136] around the camp, I observed one of my men squatted on the ground, intently surveying some object which appeared to be moving among the horses. At his request, I stooped also, and could distinctly perceive something near us which was certainly not a horse, and yet was as certainly a living object. I supposed it to be either a bear or a wolf, and at the earnest solicitation of the man, I gave the word "fire." The trigger was instantly pulled, the sparks flew from the flint, but the rifle was not exploded. At the sound, an Indian sprang from the grass where he had been crouching, and darted away towards the Snake camp. His object certainly was to appropriate one of our horses, and very fortunate for him was it that the gun missed fire, for the man was an unerring marksman. This little warning will probably check other similar attempts by these people.

Early in the morning I strolled into the Snake camp. It consists of about thirty lodges or wigwams, formed generally of branches of trees tied together in a conic summit, and covered with buffalo, deer, or elk skins. Men and little children were lolling about the ground all around the wigwams, together with a heterogeneous assemblance of dogs, cats, some tamed prairie wolves, and other "vermin." The dogs growled and snapped when I approached, the wolves cowered and looked cross, and the cats ran away and hid themselves in dark corners. They had not been accustomed to the face of a white man, and all the quadrupeds seemed to regard me as some monstrous production, more to be feared than loved or courted. This dis-

like, however, did not appear to extend to the bipeds, for many of every age and sex gathered around me, and seemed to be examining me critically in all directions. The men looked complacently at me, the women, the dear creatures, smiled upon me, and the little naked, pot-bellied children crawled around my feet, examining the fashion of my hard shoes, and playing with the [137] long fringes of my leathern inexpressibles. But I scarcely know how to commence a description of the *tout en semble* of the camp, or to frame a sentence which will give an adequate idea of the extreme filth, and most horrific nastiness of the whole vicinity. I shall therefore but transiently glance at it, omitting many of the most disgusting and abominable features.

Immediately as I entered the village, my olfactories were assailed by the most vile and mephitic odors, which I found to proceed chiefly from great piles of salmon entrails and garbage which were lying festering and rotting in the sun, around the very doors of the habitations. Fish, recent and half dried, were scattered all over the ground, under the feet of the dogs, wolves and Indian children; and others which had been split, were hanging on rude platforms erected within the precincts of the camp. Some of the women were making their breakfast of the great red salmon eggs as large as peas, and using a wooden spoon to convey them to their mouths. Occasionally, also, by way of varying the repast, they would take a huge pinch of a drying fish which was lying on the ground near them. Many of the children were similarly employed, and the little imps would also have hard contests with the dogs for a favorite morsel, the former roaring and blubbering, the latter yelping and snarling, and both rolling over and over together upon the savory soil. The whole economy of the lodges, and the inside and outside appearance, was

Spearing the Salmon

of a piece with every thing else about them — filthy beyond description — the very skins which covered the wigwams were black and stiff with rancid salmon fat, and the dresses (if dresses they may be called) of the women, were of the same color and consistence, from the same cause. These *dresses* are little square pieces of deer skin, fastened with a thong around the loins, and reaching about half way to the knees; the rest of the person is entirely naked. Some of the women had little children clinging like bullfrogs to their backs, without being fastened, and in that situation [138] extracting their lactiferous sustenance from the breast, which was thrown over the shoulders.

It is almost needless to say, that I did not remain long in the Snake camp; for although I had been a considerable time estranged from the abodes of luxury, and had become somewhat accustomed to, at least, a partial assimilation to a state of nature, yet I was not prepared for what I saw here. I never had fancied any thing so utterly abominable, and was glad to escape to a purer and more wholesome atmosphere.

When I returned to our camp, the trading was going on as briskly as yesterday. A large number of Indians were assembled around, all of whom had bundles of fish, which they were anxious to dispose of. The price of a dried salmon is a straight awl, and a small fish hook, value about one cent; ten fish are given for a common butcher knife that costs eight cents. Some, however, will prefer beads, paint, &c., and of these articles, about an equal amount in value is given. A beaver skin can be had for a variety of little matters, which cost about twelve and a half cents; value, in Boston, from eight to ten dollars!

Early in the afternoon, we repacked our bales of goods and rode out of the encampment, the Indians yelling an adieu to us as we passed them. We observed that one

had wrapped a buffalo robe around him, taken a bow and arrows in his hand, and joined us as we went off. Although we travelled rapidly during the afternoon, the man kept with us without apparent over-exertion or fatigue, trotting along constantly for miles together. He is probably on a visit to a village of his people who are encamped on the "Big river."

23d.—Towards noon, to-day, we fell in with a village, consisting of thirty willow lodges of Bannecks. The Indians flocked out to us by hundreds, leaving their fishing, and every other employment, to visit the strangers. The chief soon made himself known to us, and gave us a pressing invitation to stop a [139] short time with them, for the purpose of trade. Although we had a good supply of fish on hand, and did not expect soon to suffer from want, yet we knew not but we might be disappointed in procuring provision lower in the country, and concluded, therefore, to halt for half an hour, and make a small increase to our stock. We were in some haste, and anxious to travel on as quickly as possible, to Snake river. Captain W., therefore, urged the chief to have the fish brought immediately, as he intended soon to leave them. The only reply he could obtain to this request, was "*te sant*," (it is good,) accompanied by signs, that he wished to smoke. A pipe was provided, and he, with about a dozen of his young men, formed a circle near, and continued smoking, with great tranquillity, for half an hour.

Our patience became almost exhausted, and they were told that if their fish were not soon produced, we should leave them empty as we came; to this, the only answer of the chief was a sign to us to remain still, while he deliberated yet farther upon the subject.

We sat a short time longer in silent expectation, and were then preparing to mount our horses and be off, when

several squaws were despatched to one of the lodges. They returned in a few minutes, bringing about a dozen dried fish. These were laid in small piles on the ground, and when the usual price was offered for them, they refused it scornfully, making the most exorbitant demands. As our articles of trade were running low, and we were not in immediate want, we purchased only a sufficiency for one day, and prepared for our departure, leaving the ground strewn with the neglected salmon. The Indians were evidently very much irritated, as we could perceive by their angry countenances, and loud words of menace. Some loosed the bows from their shoulders, and shook them at us with violent gestures of rage, and a boy, of seventeen or eighteen years of age, who stood near me, struck my horse on the head with a [140] stick, which he held in his hand. This provoked me not a little; and spurring the animal a few steps forward, I brought my heavy whip several times over his naked shoulders, and sent him screeching into the midst of his people. Several bows were drawn at me for this act, and glad would the savages have been to have had me for a short time at their mercy, but as it was, they feared to let slip their arrows, and soon dropped their points, contenting themselves with vapping away in all the impotence of childish rage. As we rode off, they greeted us, not with the usual gay yell, but with a scornful, taunting laugh, that sounded like the rejoicings of an infernal jubilee. Had these people been provided with efficient arms, and the requisite amount of courage to use them, they might have given us some inconvenience.

Towards evening, we arrived on Snake river, crossed it at a ford, and encamped near a number of lodges along the shore. Shortly afterwards, Captain W., with three men, visited the Indians, carrying with them some small

articles, to trade for fish. In about half an hour they returned, bringing only about ten salmon. They observed, among the Indians, the same disinclination to traffic that the others had manifested; or rather, like the first, they placed a higher value than usual upon the commodity, and wanted, in exchange, articles which we were not willing to spare them. They treated Captain W. with the same insolence and contempt which was so irritating from those of the other village.

This kind of conduct is said to be unusual among this tribe, but it is probably now occasioned by their having recently purchased a supply of small articles from Captain Bonneville, who, they inform us, has visited them within a few days.

Being desirous to escape from the immediate vicinity of the village, we moved our camp about four miles further, and stopped for the night.

[141] 24<sup>th</sup>.— The sudden and entire change from flesh exclusively, to fish, ditto, has affected us all more or less, with diarrhoea and pain in the abdomen; several of the men have been so extremely sick, as scarcely to be able to travel; we shall, however, no doubt, become accustomed to it in a few days.

We passed, this morning, over a flat country, very similar to that along the Platte, abounding in wormwood bushes, the pulpy-leaved thorn, and others, and deep with sand, and at noon stopped on a small stream called *Malheur's creek*.<sup>64</sup>

Here a party of nine men was equipped, and despatched up the river, and across the country, on a trapping expedition, with orders to join us early in the ensuing winter, at the fort on the Columbia. Richardson was the chief

---

<sup>64</sup> Malheur River rises in a lake of that name in Harney County, Oregon, and flows east and northeast into the Lewis, being one of the latter's important western tributaries.— ED.

of this party, and when I grasped the hand of our worthy hunter, and bade him farewell, I felt as though I were taking leave of a friend. I had become particularly attached to him, from the great simplicity and kindness of his heart, and his universally correct and proper deportment. I had been accustomed to depend upon his knowledge and sagacity in every thing connected with the wild and roving life which I had led for some months past, and I felt that his absence would be a real loss, as well to myself, as to the whole camp, which had profited so much by his dexterity and skill.

Our party will now consist of only seventeen men, but the number is amply sufficient, as we have passed over the country where danger is to be apprehended from Indians. We followed the course of the creek during the afternoon, and in the evening encamped on Snake river, into which Malheur empties. The river is here nearly a mile wide, but deep and clear, and for a considerable distance, perfectly navigable for steamboats, or even larger craft, and it would seem not improbable, that at some distant day, these facilities, added to the excellence of the alluvial soil, should induce the stout and hardy adventurers of our country to make permanent settlements here.

[142] I have not observed that the Indians often attempt fishing in the "big river," where it is wide and deep; they generally prefer the slues, creeks, &c. Across these, a net of closely woven willows is stretched, placed vertically, and extending from the bottom to several feet above the surface. A number of Indians enter the water about a hundred yards above the net, and, walking closely, drive the fish in a body against the wicker work. Here they frequently become entangled, and are always checked; the spear is then used dexterously, and they are thrown out, one by one, upon the shore. With industry, a vast

number of salmon might be taken in this manner; but the Indians are generally so indolent and careless of the future, that it is rare to find an individual with provision enough to supply his lodge for a week.

25th.—Early in the day the country assumed a more hilly aspect. The rich plains were gone. Instead of a dense growth of willow and the balsam poplar, low bushes of wormwood, &c., predominated, intermixed with the tall, rank prairie grass.

Towards noon, we fell in with about ten lodges of Indians, (Snakes and Bannecks,) from whom we purchased eighty salmon. This has put us in excellent spirits. We feared that we had lost sight of the natives, and as we had not reserved half the requisite quantity of provisions for our support to the Columbia, (most of our stock having been given to Richardson's trapping party,) the prospect of several days abstinence seemed very clear before us.

In the afternoon, we deviated a little from our general course, to cut off a bend in the river, and crossed a short, high hill, a part of an extensive range which we have seen for two days ahead, and which we suppose to be in the vicinity of Powder river, and [143] in the evening encamped in a narrow valley, on the borders of the Shoshoné.<sup>65</sup>

26th.—Last night I had the misfortune to lose my favorite, and latterly my only riding horse, the other having been left at Fort Hall, in consequence of a sudden lameness, with which he became afflicted only the night before our departure.<sup>66</sup> The animal was turned out as

---

<sup>65</sup> Lewis River here makes a considerable bend to the east, hence the short cut across country. The mountains are apparently the Burnt River Range, with Powder River beyond. Wyeth identifies this as the same place at which he encamped two years previous — near the point where the Oregon Short Line railway crosses Lewis River.— ED.

<sup>66</sup> I afterwards ascertained that this lameness of my "buffalo horse," was intentionally caused by one of the hopeful gentry left in charge of the fort, for the

usual, with the others, in the evening, and as I have never known him to stray in a single instance, I conclude that some lurking Indian has stolen him. It was the fattest and handsomest horse in the band, and was no doubt carefully selected, as there was probably but a single Indian, who was unable to take more, for fear of alarming the guard. This is the most serious loss I have met with. The animal was particularly valuable to me, and no consideration would have induced me to part with it here. It is, however, a kind of accident that we are always more or less liable to in this country, and as a search would certainly be fruitless, must be submitted to with as good a grace as possible. Captain W. has kindly offered me the use of horses until we arrive at Columbia.

We commenced our march early, travelling up a broad, rich valley, in which we encamped last night, and at the head of it, on a creek called Brulé, we found one family, consisting of five Snake Indians, one man, two women, and two children.<sup>67</sup> They had evidently but very recently arrived, probably only last night, and as they must certainly have passed our camp, we feel little hesitation in believing that my lost horse is in their possession. It is, however, impossible to prove the theft upon them in [144] any way, and time is not allowed us to search the premises. We cannot even question them concerning it, as our interpreter, McCarey, left us with the trapping party.

We bought, of this family, a considerable quantity of

---

purpose of rendering the animal unable to travel, and as a consequence, confining him to the fort at the time of our departure. The good qualities of the horse as a buffalo racer, were universally known and appreciated, and I had repeatedly refused large sums for him, from those who desired him for this purpose.—TOWNSEND.

<sup>67</sup> Burnt (Brulé) River rises in Strawberry Mountains of eastern Oregon, and flows northeast, then southeast, through Baker County into Lewis River. The Oregon Trail left the latter river at the mouth of Burnt River, and advanced up that valley to its northern bend.—ED.

dried choke-cherries, these being the only article of commerce which they possessed. This fruit they prepare by pounding it with stones, and drying it in masses in the sun. It is then good tasted, and somewhat nutritive, and it loses, by the process, the whole of the astringency which is so disagreeable in the recent fruit.

Leaving the valley, we proceeded over some high and stony hills, keeping pretty nearly the course of the creek. The travelling was, as usual in such places, difficult and laborious, and our progress necessarily slow and tedious. Throughout the day, there was no change in the character of the country, and the consequence was, that three of our poor horses gave up and stopped.

27th.—This morning, two men were left at the camp, for the purpose of collecting and bringing on, moderately, the horses left yesterday, and others that may hereafter fail. We were obliged to leave with them a stock of provision greater in proportion than our own rather limited allowance, and have thus somewhat diminished our chance of performing the remainder of the journey with satisfied appetites, but there is some small game to be found on the route, grouse, ducks, &c., and occasionally a beaver may be taken, if our necessities are pressing. We made a noon camp on Brulé, and stopped at night in a narrow valley, between the hills.

28th.—Towards noon to-day, we lost the trail among the hills, and although considerable search was made, we were not able to find it again. We then directed our course due north, and at 2 o'clock struck Powder river, a narrow and shallow stream, plentifully fringed with willows. We passed down this [145] river for about five miles and encamped.<sup>68</sup> Captain W. immediately left us to

---

<sup>68</sup> Powder River rises in the Blue Mountains and flows first east, then north, then abruptly southeast into the Lewis; the trail followed its north-bearing course.

look for the lost trail, and returned in about two hours, with the information that no trace of it could be found. He therefore concludes that it is up stream, and to-morrow we travel back to search for it in that direction. Our men killed, in the afternoon, an antelope and a deer fawn, which were particularly acceptable to us; we had been on an allowance of one dried salmon per day, and we had begun to fear that even this poor pittance would fail before we could obtain other provision. Game has been exceedingly scarce, with the exception of a few grouse, pigeons, &c. We have not seen a deer, antelope, or any other quadruped larger than a hare, since we left the confines of the buffalo country. Early this morning, one of our men, named Hubbard, left us to hunt, and as he has not joined us this evening, we fear he is lost, and feel some anxiety about him, as he has not been accustomed to finding his way through the pathless wilds. He is a good marksman, however, and will not suffer much for food; and as he knows the general course, he will probably join us at Wallawalla, if we should not see him earlier.

29th.—We commenced our march early this morning, following the river to a point about six miles above where we struck it yesterday. We then took to the hills, steering N. N. W.,—it being impossible, from the broken state of the country, to keep the river bank.

Soon after we commenced the ascent, we met with difficulties in the shape of high, steep, banks, and deep ravines, the ground being thickly strewed with sharp, angular masses of lava and basalt. As we proceeded, these difficulties increased to such a degree, as to occasion a fear that our horses could never proceed. The hills at length became like a consolidated mass of irregular rock, and

---

These western affluents of the Lewis (or Snake) were explored (1819) and probably named by Donald McKenzie, then of the North West Company.—ED.

the small strips of earthy matter that occasionally appeared, were burst into wide fissures by the desiccation to which [146] the country at this season is subject. Sometimes, as we approached the verges of the cliffs, we could see the river winding its devious course many hundred feet below, rushing and foaming in eddies and whirlpools, and fretting against the steep sides of the rocks, which hemmed it in. These are what are called the cut-rocks, the sides of which are in many places as smooth and regular as though they had been worked with the chisel, and the opening between them, through which the river flows, is frequently so narrow that a biscuit might be thrown across it.

We travelled over these rocks until 10 o'clock in the day, when we stopped to rest in a small ravine, where we found a little water, and pasture for our horses. At 3, we were again on the move, making across the hills towards the river, and after a long, circuitous march, we arrived on its banks, considerably wearied, and every horse in our band lamed and completely exhausted. We have not yet found any clue to the trail for which we have been searching so anxiously; indeed it would be impossible for a distinguishable trace to be left over these rugged, stony hills, and the difficulty of finding it, or determining its direction is not a little increased by a dense fog which constantly envelopes these regions, obscuring the sun, and rendering it impossible to see an object many hundred yards in advance.

The next day we were still travelling over the high and steep hills, which, fortunately for our poor horses, were far less stony than hitherto. At about noon we descended to the plain, and struck the river in the midst of a large level prairie. We proceeded up stream for an hour, and to our great joy suddenly came in sight of a broad, open trail stretching away to the S. W. We felt, in some degree, the pleasure of a sailor who has found the port of which

he has been long and anxiously in search. We made a noon camp here, at which we remained two hours, and then travelled on in fine spirits over a beautiful, level, and unobstructed country. Our horses seemed to participate in our [147] feelings, and trotted on briskly, as though they too rejoiced in the opportunity of escaping the dreaded hills and rocks. Towards evening we crossed a single range of low hills and came to a small round prairie, with good water and excellent pasture. Here we found a family of *Kayouse* Indians, and encamped within sight of them. Two squaws from this family, visited us soon after, bringing some large kamas cakes and fermented roots, which we purchased of them.

31st.—Our route this morning, was over a country generally level and free from rocks; we crossed, however, one short, and very steep mountain range, thickly covered with tall and heavy pine trees, and came to a large and beautiful prairie, called the *Grand ronde*.<sup>69</sup> Here we found Captain Bonneville's company, which has been lying here several days, waiting the arrival of its trapping parties. We made a noon camp near it, and were visited by Captain Bonneville. This was the first time I had seen this gentleman. His manners were affable and pleasing, and he seemed possessed of a large share of bold, adventurous, and to a certain extent, romantic spirit, without which no man can expect to thrive as a mountain leader. He stated that he preferred the "free and easy" life of a mountain hunter and trapper, to the comfortable and luxurious indolence of a dweller in civilized lands, and would not exchange his homely, but wholesome mountain fare, and his buffalo

---

<sup>69</sup> Grande Ronde, a noted halting place on the Oregon Trail, was so called from its apparently circular shape, as the traveller wound down the precipitous road into its level basin; it really is an oval twenty miles long, containing three hundred thousand acres of rich land. It is in the present Union County, and Grande Ronde River flows northeasterly through it.—ED.

lodge, for the most piquant dishes of the French *artiste*, and the finest palace in the land.<sup>70</sup> This came well from him, and I was pleased with it, although I could not altogether agree with him in sentiment, for I confess I had become somewhat weary of rough travelling and rough fare, and looked forward with no little pleasure to a long rest under a Christian roof, and a general participation in Christian living.

With the captain, came a whole troop of Indians, Kay-ouse, [148] Nez Percés, &c. They were very friendly towards us, each of the chiefs taking us by the hand with great cordiality, appearing pleased to see us, and anxious to point out to us the easiest and most expeditious route to the lower country. These Indians are, almost universally, fine looking, robust men, with strong aqualine features, and a much more cheerful cast of countenance than is usual amongst the race. Some of the women might almost be called beautiful, and none that I have seen are homely. Their dresses are generally of thin deer or antelope skin, with occasionally a bodice of some linen stuffs, purchased from the whites, and their whole appearance is neat and cleanly, forming a very striking contrast to the greasy, filthy, and disgusting Snake females. I observed one young and very pretty looking woman, dressed in a great superabundance of finery, glittering with rings and beads, and flaunting in broad bands of scarlet cloth. She was mounted astride.—Indian fashion.—upon a fine bay horse, whose head and tail were decorated with scarlet and blue ribbons, and the saddle, upon which the fair one sat, was ornamented all over with beads and little hawk's bells. This damsel did not do us the honor to dismount, but seemed to keep warily aloof, as though she

---

<sup>70</sup> For a brief sketch of Bonneville, consult Gregg's *Commerce of the Prairies* in our volume XL, p. 267; note 267.—ED.

feared that some of us might be inordinately fascinated by her fine person and splendid equipments, and her whole deportment proved to us, pretty satisfactorily, that she was no common beauty, but the favored companion of one high in office, who was jealous of her slightest movement.

After making a hasty meal, and bidding adieu to the captain, and our friendly Indian visitors, we mounted our horses, and rode off. About half an hour's brisk trotting brought us to the foot of a steep and high mountain, called the *Blue*. This is said to be the most extensive chain west of the dividing ridge, and, with one exception perhaps the most difficult of passage.<sup>71</sup> The whole mountain is densely covered with tall pine trees, with [149] an undergrowth of service bushes and other shrubs, and the path is strewed, to a very inconvenient degree, with volcanic rocks. In some of the ravines we find small springs of water; they are, however, rather rare, and the grass has been lately consumed, and many of the trees blasted by the ravaging fires of the Indians. These fires are yet smouldering, and the smoke from them effectually prevents our viewing the surrounding country, and completely obscures the beams of the sun. We travelled this evening until after dark, and encamped on a small stream in a gorge, where we found a plot of grass that had escaped the burning.

*September 1st.*— Last evening, as we were about retiring to our beds, we heard, distinctly, as we thought, a loud halloo, several times repeated, and in a tone like that of

---

<sup>71</sup> Blue Mountains are a continuation of the chains of western Idaho, trending southwest, then west, toward the centre of the state of Oregon, forming a watershed between the Lewis and Columbia systems. Frémont suggests that their name arises from the dark-blue appearance given to them by the pines with which they are covered. The trail led northwest from Union into Umatilla County, following the present railway route, only less circuitous.— Ed.

a man in great distress. Supposing it to be a person who had lost his way in the darkness, and was searching for us, we fired several guns at regular intervals, but as they elicited no reply, after waiting a considerable time, we built a large fire, as a guide, and lay down to sleep.

Early this morning, a large panther was seen prowling around our camp, and the hallooing of last night was explained. It was the dismal, distressing yell by which this animal entices its prey, until pity or curiosity induces it to approach to its destruction. The panther is said to inhabit these forests in considerable numbers, and has not unfrequently been known to kill the horses of a camp. He has seldom the temerity to attack a man, unless sorely pressed by hunger, or infuriated by wounds.

## [150] CHAPTER IX

Passage of the Blue Mountains — Sufferings from thirst — Utaña river — A transformation — A novel meal — Walla-walla river — Columbia river and Fort Walla-walla — A dinner with the missionaries — Anecdote of Mr. Lee — A noble repast — Brief notice of the Fort — Departure of the missionaries — Notice of the Walla-walla Indians — Departure for Fort Vancouver — Wild ducks — Indian graves — Indian horses — Visits from Indians — Ophthalmia, a prevalent disease — Rough travelling — A company of Chinook Indians — The Dalles — The party joined by Captain Wyeth — Embarkation in canoes — A heavy gale — Dangerous navigation — Præsumptuous conduct of an Indian helmsman — A zealous botanist — Departure of Captain Wyeth with five men — Cascades — A portage — Meeting with the missionaries — Loss of a canoe — A toilsome duty — Arrival at Fort Vancouver — reflections suggested by it — Dr. John McLoughlin, the chief factor — Domiciliation of the travellers at Fort Vancouver.

*September 1st.*—The path through the valley, in which we encamped last night, was level and smooth for about a mile: we then mounted a short, steep hill, and began immediately to descend. The road down the mountain wound constantly, and we travelled in short, zig-zag lines, in order to avoid the extremely abrupt declivities: but occasionally, we were compelled to descend in places that made us pause before making the attempt: they were, some of them, almost perpendicular, and our horses would frequently slide several yards, before they could recover. To this must be added enormous jagged masses of rock, obstructing the road in many places, and pine trees projecting their horizontal branches across the path.

The road continued, as I have described it, to the valley in the plain, and a full hour was consumed before we reached it. [151] The country then became comparatively level again to the next range, where a mountain was to be ascended of the same height as the last. Here we dismounted and led our horses, it being impracticable,

in their present state, to ride them. It was the most toilsome march I ever made, and we were all so much fatigued, when we arrived at the summit, that rest was as indispensable to us as to our poor jaded horses. Here we made a noon camp, with a handful of grass and no water. This last article appears very scarce, the ravines affording none, and our dried salmon and kamas bread were eaten unmoistened. The route, in the afternoon, was over the top of the mountain, the road tolerably level, but crowded with stones. Towards evening, we commenced descending again, and in every ravine and gulley we cast our anxious eyes in search of water; we even explored several of them, where there appeared to exist any probability of success, but not one drop did we find. Night at length came on, dark and pitchy, without a moon or a single star to give us a ray of light; but still we proceeded, depending solely upon the vision and sagacity of our horses to keep the track. We travelled steadily until 9 o'clock, when we saw ahead the dark outline of a high mountain, and soon after heard the men who rode in front, cry out, joyously, at the top of their voices, "*water! water!*" It was truly a cheering sound, and the words were echoed loudly by every man in the company. We had not tasted water since morning, and both horses and men have been suffering considerably for the want of it.

2d.— Captain W. and two men, left us early this morning for Walla-walla, where they expect to arrive this evening, and send us some provision, of which we shall be in need, to-morrow.

Our camp moved soon after, under the direction of Captain Thing, and in about four miles reached *Utalla river*, where it stopped, and remained until 12 o'clock.<sup>72</sup>

---

<sup>72</sup> Umatilla River, whose earlier name appears to have been Utalla. Consult Franchère's *Narrative* in our volume vi, p. 338.—ED.

As we were approaching so near the abode of those in whose [152] eyes we wished to appear like fellow Christians, we concluded that there would be a propriety in attempting to remove at least one of the heathenish badges which we had worn throughout the journey; so Mr. N.'s razor was fished out from its hiding place in the bottom of his trunk, and in a few minutes our encumbered chins lost their long-cherished ornaments; we performed our ablutions in the river, arrayed ourselves in clean linen, trimmed our long hair, and then arranged our toilet before a mirror, with great self-complacence and satisfaction. I admired my own appearance considerably, (and this is, probably, an acknowledgement that few would make,) but I could not refrain from laughing at the strange, party-colored appearance of my physiognomy, the lower portion being fair, like a woman's, and the upper, brown and swarthy as an Indian.

Having nothing prepared for dinner to-day, I strolled along the stream above the camp, and made a meal on rose buds, of which I collected an abundance; and on returning, I was surprised to find Mr. N. and Captain T. picking the last bones of a bird which they had cooked. Upon inquiry, I ascertained that the subject was an unfortunate owl which I had killed in the morning, and had intended to preserve, as a specimen. The temptation was too great to be resisted by the hungry Captain and naturalist, and the bird of wisdom lost the immortality which he might otherwise have acquired.

In the afternoon, soon after leaving the Utalla, we ascended a high and very steep hill, and came immediately in view of a beautiful, and regularly undulating country of great extent. We have now probably done with high, rugged mountains; the sun shines clear, the air is bracing and elastic, and we are all in fine spirits.

The next day, the road being generally level, and tolerably free from stones, we were enabled to keep our horses at the swiftest gait to which we dare urge them. We have been somewhat [153] disappointed in not receiving the expected supplies from Walla-walla, but have not suffered for provision, as the grouse and hares are very abundant here, and we have shot as many as we wished.

At about noon we struck the Walla-walla river, a very pretty stream of fifty or sixty yards in width, fringed with tall willows, and containing a number of salmon, which we can see frequently leaping from the water. The pasture here, being good, we allowed our horses an hour's rest to feed, and then travelled on over the plain, until near dark, when, on rising a sandy hill, the noble Columbia burst at once upon our view. I could scarcely repress a loud exclamation of delight and pleasure, as I gazed upon the magnificent river, flowing silently and majestically on, and reflected that I had actually crossed the vast American continent, and now stood upon a stream that poured its waters directly into the Pacific. This, then, was the great Oregon, the first appearance of which gave Lewis and Clark so many emotions of joy and pleasure, and on this stream our indefatigable countrymen wintered, after the toils and privations of a long, and protracted journey through the wilderness. My reverie was suddenly interrupted by one of the men exclaiming from his position in advance, "there is the fort." We had, in truth approached very near, without being conscious of it.<sup>73</sup> There

---

<sup>73</sup> Fort Walla Walla (or Nez Percés) was built by Alexander Ross of the North West Company in July, 1818 — see Ross, *Fur Hunters*, i, p. 171, for description and representation. It passed into the possession of the Hudson's Bay Company upon the consolidation of the corporations, and being rebuilt of adobé after its destruction by fire, was maintained until 1855-56, when it was abandoned during an Indian war. It was near the sight of the present Wallula, Washington, on the left bank of the Columbia, about half a mile above Walla Walla River.— ED.

stood the fort on the bank of the river; horses and horned cattle were roaming about the vicinity, and on the borders of the little Walla-walla, we recognized the white tent of our long lost missionaries. These we soon joined, and were met and received by them like brethren. Mr. N. and myself were invited to sup with them upon a dish of stewed hares which they had just prepared, and it is almost needless to say that we did full justice to the good men's cookery. They told us that they had travelled comfortably from Fort Hall, without any unusual fatigue, and like ourselves, had no particularly stirring adventures. Their [154] route, although somewhat longer, was a much less toilsome and difficult one, and they suffered but little for food, being well provided with dried buffalo meat, which had been prepared near Fort Hall.

Mr. Walker, (a young gentleman attached to the band,) related an anecdote of Mr. Lee, the principal, which I thought eminently characteristic. The missionaries were, on one occasion, at a considerable distance behind the main body, and had stopped for a few moments to regale themselves on a cup of milk from a cow which they were driving. Mr. L. had unstrapped the tin pan from his saddle, and was about applying himself to the task, when a band of a dozen Indians was descried at a distance, approaching the little party at full gallop. There was but little time for consideration. The rifles were looked to, the horses were mounted in eager haste, and all were ready for a long run, except Mr. Lee himself, who declared that nothing should deprive him of his cup of milk, and that he meant to "lighten the old cow before he moved." He accordingly proceeded coolly to fill his tin pan, and, after a hearty drink, grasped his rifle, and mounted his horse, at the very moment that the Indians had arrived to within speaking distance. To the great relief of most of the

party, these proved to be of the friendly Nez Percé tribe, and after a cordial greeting, they travelled on together.

The missionaries informed us that they had engaged a large barge to convey themselves and baggage to Fort Vancouver, and that Captain Stewart and Mr. Ashworth were to be of the party. Mr. N. and myself were very anxious to take a seat with them, but to our disappointment, were told that the boat would scarcely accommodate those already engaged. We had therefore to relinquish it, and prepare for a journey on horseback to the *Dalles*, about eighty miles below, to which place Captain W. would [155] precede us in the barge, and engage canoes to convey us to the lower fort.

This evening, we purchased a large bag of Indian meal, of which we made a kettle of mush, and mixed with it a considerable quantity of horse tallow and salt. This was, I think, one of the best meals I ever made. We all ate heartily of it, and pronounced it princely food. We had been long without bread stuff of any kind, and the coarsest farinaceous substance, with a proper allowance of grease, would have been highly prized.

The next morning, we visited Walla-walla Fort, and were introduced, by Captain W., to Lieutenant Pierre S. Pambrun, the superintendent.<sup>74</sup> Wyeth and Mr. Pambrun had met before, and were well acquainted; they had, therefore, many reminiscences of by-gone days to recount, and

---

<sup>74</sup> Lieutenant Pierre Chrysologue Pambrun was born near Quebec in 1792. In the War of 1812-15, he was an officer in the Canadian light troops, and soon after peace was declared entered the employ of the Hudson's Bay Company. At the Red River disturbances (1816) he was taken prisoner, but soon released. Later he served at several far Western fur-trade posts, and coming to the Columbia was placed in charge at Fort Walla Walla (1832). He showed many courtesies to the overland emigrants, but refused supplies to Captain Bonneville as being a rival trader; he appears, however, to have had no such feeling with regard to Captain Wyeth. Pambrun was severely hurt by a fall from his horse (1840), and died of the injury at Walla Walla.—ED.

long conversations, relative to the variety of incidents which had occurred to each, since last they parted.

The fort is built of drift logs, and surrounded by a stocade of the same, with two bastions, and a gallery around the inside. It stands about a hundred yards from the river, on the south bank, in a bleak and unprotected situation, surrounded on every side by a great, sandy plain, which supports little vegetation, except the wormwood and thorn-bushes. On the banks of the little river, however, there are narrow strips of rich soil, and here Mr. Pambrun raises the few garden vegetables necessary for the support of his family. Potatoes, turnips, carrots, &c., thrive well, and Indian corn produces eighty bushels to the acre.

At about 10 o'clock, the barge got under way, and soon after, our company with its baggage, crossed the river in canoes, and encamped on the opposite shore.

There is a considerable number of Indians resident here, Kayouse's and a collateral band of the same tribe, called Walla-wallas.<sup>75</sup> [156] They live along the bank of the river, in shantys or wigwams of drift wood, covered with buffalo or deer skins. They are a miserable, squalid looking people, are constantly lolling around and in the fort, and annoy visitors by the importunate manner in which they endeavor to force them into some petty trade for a pipe, a hare, or a grouse. All the industrious and enterprising men of this tribe are away trading salmon, kamas root, &c. to the mountain companies.

Notwithstanding the truly wretched plight in which these poor people live, and the privations which they must necessarily have to suffer, they are said to be remarkably honest and upright in their dealings, and generally correct

---

<sup>75</sup> For the Walla Walla Indians, see Ross's *Oregon Settlers*, in our volume vii, p. 137, note 37.—ED.

in their moral deportment. Although they doubtless have the acquisitive qualities so characteristic of the race, they are rarely known to violate the principles of common honesty. A man may leave his tent unguarded, and richly stored with every thing which ordinarily excites the cupidity of the Indian, yet, on returning after a long absence, he may find all safe. What a commentary is this on the habits and conduct of our *Christian* communities!

The river is here about three-fourths of a mile in width,—a clear, deep, and rapid stream, the current being generally from three to four miles an hour. It is the noblest looking river I have seen since leaving our Delaware. The banks are in many places high and rocky, occasionally interrupted by broad, level sandy beaches. The only vegetation along the margin, is the wormwood, and other low, arid plants, but some of the bottoms are covered with heavy, rank grass, affording excellent pasture for horses.

5th.—This morning we commenced our march down the Columbia. We have no provision with us except flour and horse tallow, but we have little doubt of meeting Indians daily, with whom we can trade for fish. Our road will now be a rather monotonous one [157] along the bank of the river, tolerably level, but often rocky, so that very rapid travelling is inadmissible. The mallard duck, the widgeon, and the green-winged teal are tolerably abundant in the little estuaries of the river. Our men have killed several, but they are poor, and not good.

6th.—We have observed to-day several high, conical stacks of drift-wood near the river. These are the graves of the Indians. Some of these cemeteries are of considerable extent, and probably contain a great number of bodies. I had the curiosity to peep into several of them, and even to remove some of the coverings, but found nothing to compensate for the trouble.

We bought some salmon from Indians whom we met to-day, which, with our flour and tallow, enable us to live very comfortably.

7th.— We frequently fall in with large bands of Indian horses. There are among them some very beautiful animals, but they are generally almost as wild as deer, seldom permitting an approach to within a hundred yards or more. They generally have owners, as we observe upon many of them strange hieroglyphic looking characters, but there are no doubt some that have never known the bit, and will probably always roam the prairie uncontrolled. When the Indians wish to catch a horse from one of these bands, they adopt the same plan pursued by the South Americans for taking the wild animal.

8th.— Our road to-day has been less monotonous, and much more hilly than hitherto. Along the bank of the river, are high mountains, composed of basaltic rock and sand, and along their bases enormous drifts of the latter material. Large, rocky promontories connected with these mountains extend into the river to considerable distances, and numerous islands of the same dot its surface.

We are visited frequently as we travel along, by Indians of [158] the Walla-walla and other tribes, whose wigwams we see on the opposite side of the river. As we approach these rude huts, the inhabitants are seen to come forth in a body; a canoe is immediately launched, the light bark skims the water like a bird, and in an incredibly short time its inmates are with us. Sometimes a few salmon are brought to barter for our tobacco, paint, &c., but more frequently they seem impelled to the visit by mere curiosity. To-day a considerable number have visited us, and among them some very handsome young girls. I could not but admire the gaiety and cheerfulness which seemed to animate them. They were in high spirits, and evidently

very much pleased with the unusual privilege which they were enjoying.

At our camp in the evening, eight Walla-walla's came to see us. The chief was a remarkably fine looking man, but he, as well as several of his party, was suffering from a severe purulent ophthalmia which had almost deprived him of sight. He pointed to his eyes, and contorting his features to indicate the pain he suffered, asked me by signs to give him medicine to cure him. I was very sorry that my small stock of simples did not contain anything suited to his complaint, and I endeavored to tell him so. I have observed that this disease is rather prevalent among the Indians residing on the river, and I understood from the chief's signs that most of the Indians towards the lower country were similarly affected.

*9th.*—The character of the country has changed considerably since we left Walla-walla. The river has become gradually more narrow, until it is now but about two hundred yards in width, and completely hemmed in by enormous rocks on both sides. Many<sup>of</sup> these extend for considerable distances into the stream in perpendicular columns, and the water dashes and breaks against them until all around is foam. The current is here very swift, probably six or seven miles to the hour; and the [159] Indian canoes in passing down, seem literally to *fly* along its surface. The road to-day has been rugged to the very last degree. We have passed over continuous masses of sharp rock for hours together, sometimes picking our way along the very edge of the river, several hundred feet above it; again, gaining the back land, by passing through any casual chasm or opening in the rocks, where we were compelled to dismount, and lead our horses.

This evening, we are surrounded by a large company of Chinook Indians, of both sexes, whose temporary wig-

wams are on the bank of the river. Many of the squaws have young children sewed up in the usual Indian fashion, wrapped in a skin, and tied firmly to a board, so that nothing but the head of the little individual is seen.<sup>76</sup>

These Indians are very peaceable and friendly. They have no weapons except bows, and these are used more for amusement and exercise, than as a means of procuring them sustenance, their sole dependence being fish and beaver, with perhaps a few hares and grouse, which are taken in traps. We traded with these people for a few fish and beaver skins, and some roots, and before we retired for the night, arranged the men in a circle, and gave them a smoke in token of our friendship.

10th.—This afternoon we reached the *Dalles*.<sup>77</sup> The entire water of the river here flows through channels of about fifteen feet in width, and between high, perpendicular rocks; there are several of these channels at distances of from half a mile to a mile apart, and the water foams and boils through them like an enormous cauldron.

On the opposite side of the river there is a large Indian village, belonging to a chief named Tilki, and containing probably five hundred wigwams. As we approached, the natives swarmed like bees to the shore, launched their canoes, and joined us in a few [160] minutes. We were disappointed in not seeing Captain W. here, as this was the spot where we expected to meet him; the chief, however, told us that we should find him about twelve miles below, at the next village. We were accordingly soon

---

<sup>76</sup> This must have been a roving party, far from their base, for the Chinook were rarely found so high up the Columbia.—ED.

<sup>77</sup> The first obstruction in the Columbia on descending from Walla Walla consists of the Falls and Long and Short Narrows frequently called the Dalles. See descriptions in *Original Journals of the Lewis and Clark Expedition*, iii, pp. 146-173; Franchère's *Narrative*, in our volume vi, p. 337; and Ross's *Oregon Settlers*, our volume vii, pp. 128-133.—ED.

on the move again, and urging our horses to their fastest gait, we arrived about sunset. The captain, the chief of the village, and several other Indians, came out to meet us and make us welcome. Captain W. has been here two days, and we were pleased to learn that he had completed all the necessary arrangements for transporting ourselves and baggage to Vancouver in canoes. The route by land is said to be a very tedious and difficult one, and, in some places, almost impassable, but even were it otherwise, I believe we should all much prefer the water conveyance, as we have become very tired of riding.

Since leaving the upper village this afternoon, we have been followed by scores of Indians on foot and on horseback; some of the animals carrying three at a time; and although we travelled rapidly, the pedestrians were seldom far behind us.

We have concluded to leave our horses here, in charge of the chief of the village, who has promised to attend to them during the winter, and deliver them to our order in the spring. Captain W. having been acquainted with this man before, is willing to trust him.

11th.—Early this morning, we launched our three canoes, and each being provided with an Indian, as helmsman, we applied ourselves to our paddles, and were soon moving briskly down the river. In about an hour after, the wind came out dead ahead, and although the current was in favor, our progress was sensibly checked. As we proceeded, the wind rose to a heavy gale, and the waves ran to a prodigious height. At one moment our frail bark danced upon the crest of a wave, and at the next, fell with a surge into the trough of the sea, and as we looked at the swell before us, it seemed that in an instant we [161] must inevitably be engulfed. At such times, the canoe ahead of us was entirely hidden from view, but she was observed

to rise again like a seagull, and hurry on into the same danger. The Indian in my canoe soon became completely frightened; he frequently hid his face with his hands, and sang, in a low melancholy voice, a prayer which we had often heard from his people, while at their evening devotions. As our dangers were every moment increasing, the man became at length absolutely childish, and with all our persuasion and threats, we could not induce him to lay his paddle into the water. We were all soon compelled to put in shore, which we did without sustaining any damage; the boats were hauled up high and dry, and we concluded to remain in our quarters until to-morrow, or until there was a cessation of wind. In about an hour it lulled a little, and Captain W. ordered the boats to be again launched, in the hope of being able to weather a point about five miles below, before the gale again commenced, where we could lie by until it should be safe to proceed. The calm proved, as some of us had suspected, a treacherous one; in a very few minutes after we got under way, we were contending with the same difficulties as before, and again our cowardly helmsman laid by his paddle and began mumbling his prayer. It was too irritating to be borne. Our canoe had swung round broad side to the surge, and was shipping gallons of water at every dash.

At this time it was absolutely necessary that every man on board should exert himself to the utmost to head up the canoe and make the shore as soon as possible. Our Indian, however, still sat with his eyes covered, the most abject and contemptible looking thing I ever saw. We took him by the shoulders and threatened to throw him overboard, if he did not immediately lend his assistance: we might as well have spoken to a stone. He was finally aroused, however, by our presenting a loaded gun at his

breast; he dashed the muzzle away, seized his paddle [162] again, and worked with a kind of desperate and wild energy, until he sank back in the canoe completely exhausted. In the mean time the boat had become half full of water, shipping a part of every surf that struck her, and as we gained the shallows every man sprang overboard, breast deep, and began hauling the canoe to shore. This was even a more difficult task than that of propelling her with the oars; the water still broke over her, and the bottom was a deep kind of quicksand, in which we sank almost to the knees at every step, the surf at the same time dashing against us with such violence as to throw us repeatedly upon our faces. We at length reached the shore, and hauled the canoe up out of reach of the breakers. She was then unloaded as soon as possible, and turned bottom upwards. The goods had suffered considerably by the wetting; they were all unbaled and dried by a large fire, which we built on the shore.

We were soon visited by several men from the other boats, which were ahead, and learned that their situation had been almost precisely similar to our own, except that their Indians had not evinced, to so great a degree, the same unmanly terror which had rendered ours so inefficient and useless. They were, however, considerably frightened, much more so than the white men. It would seem strange that Indians, who have been born, and have lived during their whole lives, upon the edge of the water, who have been accustomed, from infancy, to the management of a canoe, and in whose childish sports and manly pastimes these frail barks have always been employed, should exhibit, on occasions like this, such craven and womanly fears; but the probability is, as their business is seldom of a very urgent nature, that they refrain from making excursions of any considerable extent in situations known

to be dangerous, except during calm weather; it is possible, also, that such gales may be rare, and they have not been accustomed to them. Immediately after we landed, our redoubtable helmsman broke away from us, [163] and ran at full speed back towards the village. We have doubtless lost him entirely, but we do not much regret his departure, as he proved himself so entirely unequal to the task he had undertaken.<sup>78</sup>

12th.—The gale continues with the same violence as yesterday, and we do not therefore think it expedient to leave our camp. Mr. N.'s large and beautiful collection of new and rare plants was considerably injured by the wetting it received; he has been constantly engaged since we landed yesterday, in opening and drying them. In this task he exhibits a degree of patience and perseverance which is truly astonishing; sitting on the ground, and steaming over the enormous fire, for hours together, drying the papers, and re-arranging the whole collection, specimen by specimen, while the great drops of perspiration roll unheeded from his brow. Throughout the whole of our long journey, I have had constantly to admire the ardor and perfect indefatigability with which he has devoted himself to the grand object of his tour. No difficulty, no danger, no fatigue has ever daunted him, and he finds his rich reward in the addition of nearly *a thousand* new species of American plants, which he has been enabled to make to the already teeming flora of our vast continent. My bale of birds, which was equally exposed to the action of the water, escaped without any material injury.

In the afternoon, the gale not having abated, Captain W. became impatient to proceed, as he feared his business at Vancouver would suffer by delay; he accordingly

<sup>78</sup> On this matter consult *Original Journals of the Lewis and Clark Expedition*, iii, pp. 166-210, 217, 221, 256, where the Indians are represented as venturing forth into rough water that no white man dared breast.—ED.

proposed taking one canoe, and braving the fury of the elements, saying that he wished five men, who were not afraid of water, to accompany him. A dozen of our fearless fellows volunteered in a moment, and the captain selecting such as he thought would best suit his purpose, lost no time in launching his canoe, and away she went over the foaming waters, dashing the spray from her bows, and laboring through the heavy swells until she was lost to our view. [164] The more sedate amongst us did not much approve of this somewhat hasty measure of our principal; it appeared like a useless and daring exposure of human life, not warranted by the exigencies of the case. Mr. N. remarked that he would rather lose all his plants than venture his life in that canoe.

On the 13th the wind shifted to due north, and was blowing somewhat less furiously than on the previous day. At about noon we loaded our canoes, and embarked; our progress, however, during the afternoon, was slow; the current was not rapid, and the wind was setting up stream so strongly that we could not make much headway against it; we had, also, as before, to contend with turbulent waves, but we found we could weather them with much less difficulty, since the change of the wind.

14th.— Before sunrise, a light rain commenced, which increased towards mid-day to a heavy shower, and continued steadily during the afternoon and night. There was, in the morning, a dead calm, the water was perfectly smooth, and disturbed only by the light rain pattering upon its surface. We made an early start, and proceeded on very expeditiously until about noon, when we arrived at the "cascades," and came to a halt above them, near a small Indian village. These cascades, or cataracts are formed by a collection of large rocks, in the bed of the river, which extend, for perhaps half a mile. The current

for a short distance above them, is exceedingly rapid, and there is said to be a gradual fall, or declivity of the river, of about twenty feet in the mile. Over these rocks, and across the whole river, the water dashes and foams most furiously, and with a roar which we heard distinctly at the distance of several miles.<sup>79</sup>

It is wholly impossible for any craft to make its way through these difficulties, and our light canoes would not live an instant in them. It is, therefore, necessary to make a portage, either by carrying the canoes over land to the opposite side of the cataracts, or by wading in the water near the shore, where the surges are [165] lightest, and dragging the unloaded boat through them by a cable. Our people chose the latter method, as the canoes felt very heavy and cumbersome, being saturated with the rain which was still falling rapidly. They were accordingly immediately unloaded, the baggage placed on the shore, and the men entered the water to their necks, headed by Captain Thing, and addressed themselves to the troublesome and laborious task. In the meantime, Mr. N., and myself were sent ahead to take the best care of ourselves that our situation and the surrounding circumstances permitted. We found a small Indian trail on the river bank, which we followed in all its devious windings, up and down hills, over enormous piles of rough flinty rocks, through brier bushes, and pools of water, &c. &c., for about a mile, and descending near the edge of the river, we observed a number of white men who had just succeeded in forcing a large barge through the torrent, and were then warping her into still water near the shore.

---

<sup>79</sup> The cascades are the last obstructions on the Lower Columbia. Consult *Original Journals of the Lewis and Clark Expedition*, iii, pp. 179-185; Franchère's *Narrative* in our volume vi, p. 336; and Ross's *Oregon Settlers* in our volume vii, pp. 121-125.—ED.

Upon approaching them more closely, we recognised, to our astonishment, our old friend Captain Stewart, with the good missionaries, and all the rest who left us at Walla-walla on the 4th. Poor fellows! Every man of them had been over breast deep in water, and the rain, which was still falling in torrents, was more than sufficient to drench what the waves did not cover, so that they were most abundantly soaked and bedraggled. I felt sadly inclined to laugh heartily at them, but a single glance at the sorry appearance of myself and my companion was sufficient to check the feeling. We joined them, and aided in kindling a fire to warm and dry ourselves a little, as there was not a dry rag on us, and we were all in an ague with cold. After a very considerable time, we succeeded in igniting the wet timber, and had a tolerably large fire. We all seated ourselves on the ground around it, and related our adventures. They had, like ourselves, suffered somewhat from the head-wind and heavy swells, but unlike us they had a craft that would weather it easily; even they, however, [166] shipped some water, and made very little progress for the last two days. They informed us that Captain W.'s canoe had been dashed to pieces on the rocks above, and that he and all his crew were thrown into the water, and forced to swim for their lives. They all escaped, and proceeded down the river, this morning, in a canoe, hired of the Indians here, one of whom accompanied them, as pilot.

After a hasty meal of fish, purchased on the spot, our friends reloaded their boat and got under way, hoping to reach Vancouver by next morning. Mr. N. and myself remained some time longer here, expecting intelligence from our people behind; we had begun to feel a little uneasy about them, and thought of returning to look into their situation, when Captain T. came in haste towards us, with the mortifying intelligence that one canoe had

been stove upon the rocks, and the other so badly split, that he feared she would not float; the latter was, however, brought on by the men, and moored where we had stopped. A man was then despatched to an Indian village, about five miles below, to endeavor to procure one or two canoes and a pilot. In the mean time, we had all to walk back along the circuitous and almost impassable Indian trail, and carry our wet and heavy baggage from the spot where the boats had been unloaded. The distance, as I have stated, was a full mile, and the road so rough and encumbered as to be scarcely passable. In walking over many of the large and steep rocks, it was often necessary that the hands should be used to raise and support the body; this, with a load, was inconvenient. Again, in ascending and descending the steep and slippery hills, a single mis-step was certain to throw us in the mud, and bruise us upon the sharp rocks which were planted all around. This accident occurred several times with us all.

Over this most miserable of all roads, with the cold rain dashing and pelting upon us during the whole time, until we felt as [167] though we were frozen to the very marrow, did we all have to travel and return four separate times, before our baggage was properly deposited. It was by far the most fatiguing, cheerless, and uncomfortable business in which I was ever engaged, and truly glad was I to lie down at night on the cold, wet ground, wrapped in my blankets, out of which I had just wrung the water, and I think I never slept more soundly or comfortably than that night.<sup>50</sup>

I arose the next morning rested and refreshed, though somewhat sore from sundry bruises received on the hills to which I have alluded.

---

<sup>50</sup> I could not but recollect at that time, the last injunction of my dear old grandmother, not to sleep in damp beds! — TOWNSEND.

15th.—The rain still continued falling, but lightly, the weather calm and cool. The water immediately below the cascades foams and boils in a thousand eddies, forming little whirlpools, which, however insignificant they may appear, are exceedingly dangerous for light canoes, whirling their bows around to the current, and capsizing them in an instant. Near the shore, at the foot of the cataract, there is a strong backward tow, through which it is necessary to drag the canoe, by a line, for the distance of a hundred yards; here it feels the force of the opposite current, and is carried on at the rate of seven or eight miles to the hour.

The man whom we sent yesterday to the village, returned this morning; he stated that one canoe only could be had, but that three Indians, accustomed to the navigation, would accompany us; that they would soon be with us, and endeavor to repair our damaged boat. In an hour they came, and after the necessary clamping and caulking of our leaky vessel, we loaded, and were soon moving rapidly down the river. The rain ceased about noon, but the sun did not appear during the day.

[168] 16th.—The day was a delightful one; the sky was robed in a large flaky cumulus, the glorious sun occasionally bursting through among the clouds, with dazzling splendor. We rose in the morning in fine spirits, our Indians assuring us that “King George,” as they called the fort, was but a short distance from us. At about 11 o'clock, we arrived, and stepped on shore at the *end of our journey*.

It is now three days over six months since I left my beloved home. I, as well as the rest, have been in some situations of danger, of trial, and of difficulty, but I have passed through them all unharmed, with a constitution strengthened, and invigorated by healthful exercise, and

a heart which I trust can feel deeply, sincerely thankful to that kind and overruling Providence who has watched over and protected me.

We have passed for months through a country swarming with Indians who thirsted for our blood, and whose greatest pride and glory consisted in securing the scalp of a white man. Enemies, sworn, determined enemies to all, both white and red, who intrude upon his hunting grounds, the Blackfoot roams the prairie like a wolf seeking his prey, and springing upon it when unprepared, and at the moment when it supposes itself most secure. To those who have always enjoyed the comforts and security of civilized life, it may seem strange that persons who know themselves to be constantly exposed to such dangers — who never lie down at night without the weapons of death firmly grasped in their hands, and who are in hourly expectation of hearing the terrific war whoop of the savage, should yet sleep soundly and refreshingly, and feel themselves at ease; such however is the fact. I never in my life enjoyed rest more than when travelling through the country of which I speak. I had become accustomed to it: I felt constant apprehension certainly, but not to such an extent as to deprive me of any of the few comforts which I could command in such an uncomfortable country. The [169] guard might pass our tent, and cry "all's well," in his loudest key, without disturbing my slumbers: but if the slightest *unusual* noise occurred, I was awake in an instant, and listening painfully for a repetition of it.

On the beach in front of the fort, we were met by Mr. Lee, the missionary, and Dr. John McLoughlin, the chief factor, and Governor of the Hudson's Bay posts in this vicinity. The Dr. is a large, dignified and very noble looking man, with a fine expressive countenance, and remarkably bland and pleasing manners. The missionary

introduced Mr. N. and myself in due form, and we were greeted and received with a frank and unassuming politeness which was most peculiarly grateful to our feelings. He requested us to consider his house our home, provided a separate room for our use, a servant to wait upon us, and furnished us with every convenience which we could possibly wish for. I shall never cease to feel grateful to him for his disinterested kindness to the poor houseless and travel-worn strangers.<sup>81</sup>

---

<sup>81</sup> Dr. John McLoughlin, born near Quebec, October 19, 1784, was educated as a physician, and for a time studied in Paris. Early in the nineteenth century he entered the North West Company's employ, and was stationed at Fort William, on Lake Superior, where he knew Sir Alexander Mackenzie and other frontier celebrities. In 1818 he married Margaret, widow of Alexander McKay, who perished in the "Tonquin" (1811). In 1824 McLoughlin was transferred to the Columbia, as chief factor for the Hudson's Bay Company in all the transmontane region. Making his headquarters at Fort Vancouver, he for upwards of twenty years ruled with a firm but mild justice this vast forest empire. On the great American emigration to Oregon, McLoughlin's humanity and kindness of heart led him to succor the weary homeseekers, for which cause he was reprimanded by the company and thereupon resigned (1846). The remainder of his life was passed at Oregon City, and was somewhat embittered by land controversies. He became a naturalized American citizen, and after his death (September 7, 1857) the Oregon legislature made to his heirs restitution of his lands, in recognition of the great service of the "Father of Oregon." Brief sketches from his life are included in E. E. Dye, *McLoughlin and Old Oregon, a Chronicle* (Chicago, 1900).—ED.

## [170] CHAPTER X

Fort Vancouver — Agricultural and other improvements — Vancouver "camp" — Approach of the rainy season — Expedition to the Willammet — The falls — A village of Klikatat Indians — Manner of flattening the head — A Flathead infant — Brig "May Dacre" — Preparations for a settlement — Success of the naturalists — Chinook Indians — their appearance and costume — Ague and fever — Superstitious dread of the Indians — Desertion of the Sandwich Islanders from Captain Wyeth's party — Embarkation for a trip to the Islands — George, the Indian pilot — Mount Coffin — A visit to the tombs — Superstition — Visit to an Indian house — Fort George — Site of Astoria — A blind Indian boy — Cruel and unfeeling conduct of the savages — their moral character — Baker's Bay — Cape Disappointment — Dangerous bar at the entrance of the river — The sea beach — Visit of Mr. Ogden — Passage across the bar. . . .

FORT VANCOUVER is situated on the north bank of the Columbia on a large level plain, about a quarter of a mile from the shore.<sup>82</sup> The space comprised within the stoccade is an oblong square, of about one hundred, by two hundred and fifty feet. The houses built of logs and frame-work, to the number of ten or twelve, are ranged around in a quadrangular form, the one occupied by the doctor being in the middle. In front, and enclosed on three sides by the buildings, is a large open space, where all the in-door work of the establishment is done. Here the Indians assemble with their multifarious articles of trade, beaver,

<sup>82</sup> Fort Vancouver was the centre of the Hudson's Bay Company's operations in Oregon, and the most important post in that country. Built in 1824-25 under the supervision of Dr. John McLoughlin, who decided to transfer thither his headquarters from Fort George (Astoria), its site was on the north bank of the Columbia, a hundred and fourteen miles from the mouth of the river, and six miles above that of the Willamette. It was not a formidable enclosure, for the Indians thereabout were in general peaceful, and a large farm and an agricultural settlement were attached to the post. After McLoughlin resigned (1846), James Douglas was chief factor until the American possession. In 1849 General Harney took charge, and by orders from Washington destroyed part of the trading post, and established a United States military post now known as Vancouver Barracks.— ED.

otter, venison, and various other game, and here, once a week, several scores of Canadians are employed, beating the furs which have been collected, in order to free them from dust and vermin.

[171] Mr. N. and myself walked over the farm with the doctor, to inspect the various improvements which he has made. He has already several hundred acres fenced in, and under cultivation, and like our own western prairie land, it produces abundant crops, particularly of grain, without requiring any manure. Wheat thrives astonishingly; I never saw better in any country, and the various culinary vegetables, potatoes, carrots, parsnips, &c., are in great profusion, and of the first quality. Indian corn does not flourish so well as at Walla-walla, the soil not being so well adapted to it; melons are well flavored, but small; the greatest curiosity, however, is the apples, which grow on small trees, the branches of which would be broken without the support of props. So profuse is the quantity of fruit that the limbs are covered with it, and it is actually *packed* together precisely in the same manner that onions are attached to ropes when they are exposed for sale in our markets.

On the farm is a grist mill, a threshing mill, and a saw mill, the two first, by horse, and the last, by water power; besides many minor improvements in agricultural and other matters, which cannot but astonish the stranger from a civilized land, and which reflect great credit upon the liberal and enlightened chief factor.

In the propagation of domestic cattle, the doctor has been particularly successful. Ten years ago a few head of neat cattle were brought to the fort by some fur traders from California; these have now increased to near seven hundred. They are a large framed, long horned breed, inferior in their milch qualities to those of the United States, but the

beef is excellent, and in consequence of the mildness of the climate, it is never necessary to provide them with fodder during the winter, an abundant supply of excellent pasture being always found.

On the farm, in the vicinity of the fort, are thirty or forty log huts, which are occupied by the Canadians, and others attached [172] to the establishment. These huts are placed in rows, with broad lanes or streets between them, and the whole looks like a very neat and beautiful village. The most fastidious cleanliness appears to be observed; the women may be seen sweeping the streets and scrubbing the door-sills as regularly as in our own proverbially cleanly city.<sup>83</sup>

*Sunday, September 25th.*— Divine service was performed in the fort this morning by Mr. Jason Lee. This gentleman and his nephew had been absent some days in search of a suitable place to establish themselves, in order to fulfil the object of their mission. They returned yesterday, and intend leaving us to-morrow with their suite for the station selected, which is upon the Wallamet river, about sixty miles south of the fort.<sup>84</sup>

In the evening we were gratified by the arrival of Captain Wyeth from below, who informed us that the brig from Boston, which was sent out by the company to which Wyeth

---

<sup>83</sup> I have given this notice of the suburbs of the fort, as I find it in my journal written at the time; I had reason, subsequently, to change my opinion with regard to the scrupulous cleanliness of the Canadians' Indian wives, and particularly after inspecting the internal economy of the dwellings. What at first struck me as neat and clean, by an involuntary comparison of it with the extreme filthiness to which I had been accustomed amongst the Indians, soon revealed itself in its proper light, and I can freely confess that my first estimate was too high.—  
TOWNSEND.

<sup>84</sup> Jason Lee had intended to settle among the Flatheads; but upon the advice of McLoughlin, reinforced by his own observations, the missionary decided to establish his first station in the fertile Willamette valley. He proceeded to the small settlement of French Canadian ex-servants of the company and built his house on the east side of the river, at Chemyway, in Marion County.— ED.

is attached, had entered the river, and was anchored about twenty miles below, at a spot called Warrior's point, near the western entrance of the Wallammet.<sup>85</sup>

Captain W. mentioned his intention to visit the Wallammet country, and seek out a convenient location for a fort which he wishes to establish without delay, and Mr. N. and myself accepted an invitation to accompany him in the morning. He has brought with him one of the brig's boats, and eight oarsmen, five of whom are Sandwich Islanders.

We have experienced for several days past, gloomy, lowering, and showery weather: indeed the sun has scarcely been seen for [173] a week past. This is said to indicate the near approach of the rainy season, which usually sets in about the middle of October, or even earlier. After this time, until December, there is very little clear weather, showers or heavy clouds almost constantly prevailing.

On the 29th, Captain Wyeth, Mr. N., and myself, embarked in the ship's boat for our exploring excursion. We had a good crew of fine robust sailors, and the copper-colored islanders.— or *Kanakas*, as they are called,— did their duty with great alacrity and good will.

At about five miles below the fort, we entered the upper mouth of the Wallammet. This river is here about half the width of the Columbia, a clear and beautiful stream, and navigable for large vessels to the distance of twenty-five miles. It is covered with numerous islands, the largest of which is that called *Wappatoo Island*, about twenty miles in length.<sup>86</sup> The vegetation on the main land is

<sup>85</sup> Warriors' Point is at the lower end of Wappato (or Sauvie) Island, the eastern boundary of the lower Willamette mouth. Probably it received its name from a party of Indians who in 1816 fired upon a trading party from Fort George and drove them back from the Willamette; see Alexander Ross, *Fur Hunters*, i, pp. 100, 101.— ED.

<sup>86</sup> This large island across the mouth of the Willamette valley was by Lewis and Clark named Image-Canoe, later Wappato Island. It is now known as Sauvie

good, the timber generally pine and post oak, and the river is margined in many places with a beautiful species of willow with large ob-lanceolate leaves like those of the peach, and white on their under surface. The timber on the islands is chiefly oak, no pine growing there. At about 10 o'clock we overtook three men whom Captain W. had sent ahead in a canoe and we all landed soon after on the beach and dined on a mess of salmon and peas which we had provided. We were under way again in the afternoon, and encamped at about sunset. We have as yet seen no suitable place for an establishment, and to-morrow we proceed to the falls of the river, about fifteen miles further. Almost all the land in the vicinity is excellent and well calculated for cultivation, and several spots which we have visited, would be admirably adapted to the captain's views, but that there is not a sufficient extent unincumbered, or which could be fitted for the purposes of tillage in a space of time short enough [174] to be serviceable; others are at some seasons inundated, which is an insurmountable objection.

We embarked early the next morning, and at 11 o'clock arrived at the falls, after encountering some difficulties from rapids, through which we had to warp our boat.<sup>87</sup> There are here three falls on a line of rocks extending across the river, which forms the bed of the upper channel. The water is precipitated through deep abraded gorges,

---

for Jean Baptiste Sauvé, who was for many years a faithful servant of the Hudson's Bay Company, and maintained the dairy farm on this island.— ED.

<sup>87</sup> The falls of Willamette were not discovered by Lewis and Clark, who explored that river only to the site of Portland. Probably the first white men to visit them were a party led by Franchère and William Henry in 1814; see Franchère's *Narrative* in our volume vi, p. 313. McLoughlin staked out a claim around these falls in 1829, and made some improvements. Later (1840) his claims were contested, but in 1842 the land was laid off in lots and entitled Oregon City. The falls are now passed by locks, in order to facilitate navigation on the upper Willamette.— ED.

and falls perhaps forty feet at an angle of about twenty degrees. It was a beautiful sight when viewed from a distance, but it became grand and almost sublime as we approached it nearer. I mounted the rocks and stood over the highest fall, and although the roar of the cataract was almost deafening, and the rays of the bright sun reflected from the white and glittering foam threatened to deprive me of sight, yet I became so absorbed in the contemplation of the scene, and the reflections which were involuntarily excited, as to forget every thing else for the time, and was only aroused by Captain W. tapping me on the shoulder, and telling me that every thing was arranged for our return. While I visited the falls, the captain and his men had found what they sought for; and the object of our voyage being accomplished, we got on board immediately and shaped our course down the river with a fair wind, and the current in favor.

About two miles below the cataract is a small village of Klikitat Indians.<sup>88</sup> Their situation does not appear different from what we have been accustomed to see in the neighborhood of the fort. They live in the same sort of miserable loose hovels, and are the same wretched, squalid looking people. Although enjoying far more advantages, and having in a much greater degree the means of rendering themselves comfortable, yet their mode of living, their garments, their wigwams, and every thing connected with them, is not much better than the Snakes and [175] Bannecks, and very far inferior to that fine, noble-looking race, the Kayouse, whom we met on the *Grand ronde*.

---

<sup>88</sup> The Klikitat were a Shahaptian tribe, near kin to the Yakima. Their habitat was on both sides of the Cascade Range, north of the Columbia. Early in the nineteenth century they made a futile attempt to settle in the Willamette valley. They were probably the Wahhowpums of Lewis and Clark.—ED.

A custom prevalent, and almost universal amongst these Indians, is that of flattening, or mashing in the whole front of the skull, from the superciliary ridge to the crown. The appearance produced by this unnatural operation is almost hideous, and one would suppose that the intellect would be materially affected by it. This, however, does not appear to be the case, as I have never seen, (with a single exception, the Kayouse,) a race of people who appeared more shrewd and intelligent. I had a conversation on this subject, a few days since, with a chief who speaks the English language. He said that he had exerted himself to abolish the practice in his own tribe, but although his people would listen patiently to his talk on most subjects, their ears were firmly closed when this was mentioned; "they would leave the council fire, one by one, until none but a few squaws and children were left to drink in the words of the chief." It is even considered among them a degradation to possess a round head, and one whose *caput* has happened to be neglected in his infancy, can never become even a subordinate chief in his tribe, and is treated with indifference and disdain, as one who is unworthy a place amongst them.

The flattening of the head is practiced by at least ten or twelve distinct tribes of the lower country, the Klikatats, Kalapooyahs, and Multnomahs, of the Wallammet, and its vicinity;<sup>89</sup> the Chinooks, Klatsaps, Klatstonis, Kowalitsks, Katlammets, Killemooks, and Chekalis of the lower Columbia and its tributaries, and probably by others both north and south.<sup>90</sup> The tribe called Flatheads, or *Salish*,

---

<sup>89</sup> For the Kalapuya and Multnomah tribes of the Willamette valley, consult Ross's *Oregon Settlers*, in our volume vii, p. 230, note 80, and Franchère's *Narrative* in our volume vi, p. 247, note 53, respectively.—ED.

<sup>90</sup> Consult Franchère's *Narrative*, notes 39, 40, 49, 65, 67, and Ross's *Oregon Settlers*, pp. 102, 103, note 13.—ED.

who reside near the sources of the Oregon, have long since abolished this custom.<sup>91</sup>

The mode by which the flattening is effected, varies considerably with the different tribes. The Wallammet Indians place the infant, soon after birth, upon a board, to the edges of which [176] are attached little loops of hempen cord or leather, and other similar cords are passed across and back, in a zig-zag manner, through these loops, enclosing the child, and binding it firmly down. To the upper edge of this board, in which is a depression to receive the back part of the head, another smaller one is attached by hinges of leather, and made to lie obliquely upon the forehead, the force of the pressure being regulated by several strings attached to its edge, which are passed through holes in the board upon which the infant is lying, and secured there.

The mode of the Chinooks, and others near the sea, differs widely from that of the upper Indians, and appears somewhat less barbarous and cruel. A sort of cradle is formed by excavating a pine log to the depth of eight or ten inches. The child is placed in it on a bed of little grass mats, and bound down in the manner above described. A little boss of tightly plaited and woven grass is then applied to the forehead, and secured by a cord to the loops at the side. The infant is thus suffered to remain from four to eight months, or until the sutures of the skull have in some measure united, and the bone become solid and firm. It is seldom or never taken from the cradle, ex-

---

<sup>91</sup> For the use of Flathead as a generic term, consult Franchère's *Narrative*, p. 340, note 145. Lewis and Clark noted that instances of the custom of flattening the forehead by pressure diminished in frequency from the coast east: among the tribes of eastern Oregon and Washington, only an occasional female appeared with flattened head, while among the coast tribes the custom was universal for both sexes.—ED.

cept in case of severe illness, until the flattening process is completed.<sup>92</sup>

I saw, to-day, a young child from whose head the board had just been removed. It was, without exception, the most frightful and disgusting looking object that I ever beheld. The whole front of the head was completely flattened, and the mass of brain being forced back, caused an enormous projection there. The poor little creature's eyes protruded to the distance of half an inch, and looked inflamed and discolored, as did all the surrounding parts. Although I felt a kind of chill creep over me from the contemplation of such dire deformity, yet there was something so stark-staring, and absolutely queer in the physiognomy, that I could not repress a smile; and when the mother amused the little object and made it laugh, it looked so irresistibly, [177] so *terribly* ludicrous, that I and those who were with me, burst into a simultaneous roar, which frightened it and made it cry, in which predicament it looked much less horrible than before.

On the 1st of November we arrived at the brig. She was moored, head and stern, to a large rock near the lower mouth of the Wallammet. Captain Lambert with his ship's company, and our own mountain men, were all actively engaged at various employments; carpenters, smiths, coopers, and other artisans were busy in their several vocations; domestic animals, pigs, sheep, goats, poultry, &c., were roaming about as if perfectly at home, and the whole scene looked so like the entrance to a country village, that it was difficult to fancy oneself in a howling wilderness inhabited only by the wild and improvident Indian, and his scarcely more free and fearless neighbors, the bear

---

<sup>92</sup> See illustration in *Original Journals of the Lewis and Clark Expedition*, iv, p. 10.—ED.

and the wolf.<sup>93</sup> An excellent temporary storehouse of twigs, thatched with grass, has been erected, in which has been deposited the extensive assortment of goods necessary for the settlement, as well as a number of smaller ones, in which the men reside. It is intended as soon as practicable, to build a large and permanent dwelling of logs, which will also include the store and trading establishment, and form the groundwork for an *American fort* on the river Columbia.

5th.—Mr. N. and myself are now residing on board the brig, and pursuing with considerable success our scientific researches through the neighborhood. I have shot and prepared here several new species of birds, and two or three undescribed quadrupeds, besides procuring a considerable number, which, though known to naturalists, are rare, and therefore valuable. My companion is of course in his element; the forest, the plain, the rocky hill, and the mossy bank yield him a rich and most abundant supply.

[178] We are visited daily by considerable numbers of Chinook and Klikatat Indians, many of whom bring us provisions of various kinds, salmon, deer, ducks, &c., and receive in return, powder and shot, knives, paint, and *Indian rum*, i. e. rum and water in the proportion of one part of the former to two of the latter. Some of these Indians would be handsome were it not for the abominable practice, which, as I have said, is almost universal amongst them, of destroying the form of the head. The features of many are regular, though often devoid of expression, and

---

<sup>93</sup> The brig was the "May Dacre;" Captain Lambert had been in command of Wyeth's earlier vessel, the "Sultana," which was wrecked on a South Pacific reef. He later made many voyages in command of various vessels, the last of which sailed from Hawaii to New Bedford, Massachusetts. He died at "Sailor's Snug Harbor" on Staten Island. See F. H. Victor, "Flotsom and Jetsom of the Pacific," in *Oregon Historical Society Quarterly*, ii, pp. 36-54.—ED.

the persons of the men generally are rather symmetrical; their stature is low, with light sinewy limbs, and remarkably small delicate hands. The women are usually more rotund, and, in some instances, even approach obesity. The principal clothing worn by them is a sort of short petticoat made of strands of pine bark or twisted hempen strings, tied around the loins like a marro. This article they call a *kalaquarté*; and is often their only dress; some, however, cover the shoulders with a blanket, or robe made of muskrat or hare skins sewed together.<sup>94</sup>

A disease of a very fatal character is prevalent among these Indians; many of them have died of it; even some of those in the neighborhood of the fort, where medical assistance was always at hand. The symptoms are a general coldness, soreness and stiffness of the limbs and body, with violent tertian ague. Its fatal termination is attributable to its tendency to attack the liver, which is generally affected in a few days after the first symptoms are developed. Several of the white people attached to the fort have been ill with it, but no deaths have occurred amongst them, the disease in their case having yielded to the simple tonic remedies usually employed at home. This I have no doubt would be equally the case with the Indians, were they [179] willing to submit to proper restrictions during the time of administering medicine.

Captain Lambert informs me that on his first landing here the Indians studiously avoided his vessel, and all kind of intercourse with his crew, from the supposition, (which they have since acknowledged) that the malady which they dread so much was thus conveyed. As in a short time it became desirable, on account of procuring supplies of provision, to remove this impression, some

---

<sup>94</sup> See *Original Journals of the Lewis and Clark Expedition*, iii, pp. 239-242.— ED.

pains were taken to convince the Indians of their error, and they soon visited the ship without fear.

Mr. N. and myself have been anxious to escape the wet and disagreeable winter of this region, and visit some other portion of the country, where the inclemency of the season will not interfere with the prosecution of our respective pursuits. After some reflection and consultation, we concluded to take passage in the brig, which will sail in a few weeks for the Sandwich Islands. We shall remain there about three months, and return to the river in time to commence our peregrinations in the spring.

23d.—At Fort Vancouver. A letter was received yesterday by Dr. McLoughlin, from Captain Wyeth, dated Walla-walla, stating that the twelve Sandwich Islanders whom he took with him a week since for a journey to Fort Hall, had deserted, each taking a horse. They had no doubt heard from some of their countrymen, whom they met at the fort, of the difficulties of the route before them, which were probably very much exaggerated. Captain W. is on the alert to find them, and is sending men on their trail in every direction, but it is more than probable that they will not be overtaken, and the consequence will then be, that the expedition must be abandoned, and the captain return to the fort to spend the winter.

*December 3d.*—Yesterday Mr. N. and myself went down the river to the brig, and this morning early the vessel left her [180] moorings, and with her sails unloosed stood out into the channel way. The weather was overcast, and we had but little wind, so that our progress during the morning was necessarily slow. In the afternoon we ran aground in one and a half fathoms water, but as the tide was low, we were enabled to get her clear in the evening. The navigation of this river is particularly difficult in consequence of numerous shoals and sand bars, and good

pilots are scarce, the Indians alone officiating in that capacity. Towards noon the next day, a Kowalitsk Indian with but one eye, who said his name was *George*, boarded us, and showed a letter which he carried, written by Captain McNeill, in the Hudson's Bay service, recommending said *George* as a capable and experienced pilot. We accepted his services gladly, and made a bargain with him to take us into Baker's bay near the cape, for four bottles of rum; with the understanding, however, that every time the brig ran aground, one bottle of the precious liquor was to be forfeited.<sup>95</sup> *George* agreed to the terms, and taking his station at the bow, gave his orders to the man at the wheel like one having authority, pointing with his finger when he wished a deviation from the common course, and pronouncing in a loud voice the single word *ookook*, (here.)

On the afternoon of the 4th, we passed along a bold precipitous shore, near which we observed a large isolated rock, and on it a great number of canoes, deposited above the reach of the tides. This spot is called *Mount Coffin*, and the canoes contain the dead bodies of Indians. They are carefully wrapped in blankets, and all the personal property of the deceased, bows and arrows, guns, salmon spears, ornaments, &c., are placed within, and around his canoe. The vicinity of this, and all other cemeteries, is held so sacred by the Indians, that they never approach it, except to make similar deposits; they will often even travel a considerable distance out of their course, in order to avoid intruding upon the sanctuary of their dead.<sup>96</sup>

[181] We came to anchor near this rock in the evening, and Captain Lambert, Mr. N., and myself visited the tombs.

<sup>95</sup> For Baker's Bay, and the origin of its name, see Franchère's *Narrative*, our volume vi, p. 234, note 38.—ED.

<sup>96</sup> For Mount Coffin see both Franchère and Ross, volume vi, p. 244, and volume vii, pp. 117, 118, respectively.—ED.

We were especially careful not to touch or disarrange any of the fabrics, and it was well we were so, for as we turned to leave the place, we found that we had been narrowly watched by about twenty Indians, whom we had not seen when we landed from our boat. After we embarked, we observed an old withered crone with a long stick or wand in her hand, who approached, and walked over the ground which we had defiled with our sacrilegious tread, waving her enchanted rod over the mouldering bones, as if to purify the atmosphere around, and exorcise the evil spirits which we had called up.

I have been very anxious to procure the skulls of some of these Indians, and should have been willing, so far as I alone was concerned, to encounter some risk to effect my object, but I have refrained on account of the difficulty in which the ship and crew would be involved, if the sacrilege should be discovered; a prejudice might thus be excited against our little colony which would not soon be overcome, and might prove a serious injury.

*6th.*— The weather is almost constantly rainy and squally, making it unpleasant to be on deck; we are therefore confined closely to the cabin, and are anxious to get out to sea as soon as possible, if only to escape this.

In the afternoon, the captain and myself went ashore in the long-boat, and visited several Indian houses upon the beach. These are built of roughly hewn boards and logs, usually covered with pine bark, or matting of their own manufacture, and open at the top, to allow the smoke to escape. In one of these houses we found men, women, and children, to the number of fifty-two, seated as usual, upon the ground, around numerous fires, the smoke from which filled every cranny of the building, and to us was almost stifling, although the Indians did not appear to suffer [182] any inconvenience from it. Although living in a state of the most abject poverty, deprived of most of

the absolute necessaries of life, and frequently enduring the pangs of protracted starvation, yet these poor people appear happy and contented. They are scarcely qualified to enjoy the common comforts of life, even if their indolence did not prevent the attempt to procure them.

On the afternoon of the 8th, we anchored off *Fort George*, as it is called, although perhaps it scarcely deserves the name of a fort, being composed of but one principal house of hewn boards, and a number of small Indian huts surrounding it, presenting the appearance, from a distance, of an ordinary small farm house with its appropriate out-buildings. There is but one white man residing here, the superintendent of the fort; but there is probably no necessity for more, as the business done is not very considerable, most of the furs being taken by the Indians to Vancouver. The establishment is, however, of importance, independent of its utility as a trading post, as it is situated within view of the dangerous cape, and intelligence of the arrival of vessels can be communicated to the authorities at Vancouver in time for them to render adequate assistance to such vessels by supplying them with pilots, &c. This is the spot where once stood the fort established by the direction of our honored countryman, John Jacob Astor. One of the chimneys of old Fort Astoria is still standing, a melancholy monument of American enterprise and domestic misrule. The spot where once the fine parterre overlooked the river, and the bold stoccade enclosed the neat and substantial fort, is now overgrown with weeds and bushes, and can scarce be distinguished from the primeval forest which surrounds it on every side.<sup>97</sup>

---

<sup>97</sup> Compare Franchère's *Narrative*, in our volume vi, p. 241, note 42, and Ross's *Oregon Settlers*, our volume vii, pp. 243-247, 250. The fort had been abandoned in 1824, but later was restored as a post of observation.—ED.

Captain Lambert, Mr. N. and myself visited the Indian houses in the neighborhood. In one of them we saw a poor little boy about three years of age who had been blind from his birth. He [183] was sitting on the ground near the fire, surrounded by a quantity of fish bones which he had been picking. Our sympathy was very much excited for the poor little unfortunate, particularly as he was made a subject for the taunting jibes and laughter of a number of men and women, squatting around, and his mother sat by with the most cruel apathy and unconcern, and only smiled at the commiseration which we expressed for her innocent and peculiarly unhappy offspring. It seems difficult to believe that those who possess the form and countenance of human creatures, should so debase the natural good feelings which God has implanted in them: but these ignorant and gross wretches seemed to take credit to themselves in rendering this afflicted being unhappy, and smiled and looked at each other when we endeavored to infuse a little pity into them. The child had evidently been very much neglected, and almost starved, and the little articles which we presented it, (in the hope, that the Indians on seeing us manifest an interest in it, would treat it more tenderly,) it put to its mouth eagerly, but finding them not eatable, threw them aside in disgust. Oh! how I wished at that moment for a morsel of bread to give this little famished and neglected creature. We soon left the place, and returned to the brig, but I could think of nothing during the remainder of the evening but the little blind child, and at night I dreamed I saw it, and it raised its dim and sightless orbs, and stretched out its little emaciated arms towards me, as if begging for a crumb to prevent its starving.

These people, as I have already said, do not appear to possess a particle of natural good feeling, and in their

moral character, they are little better than brutes. In the case of the blind boy, they seemed to take pride in tormenting it, and rendering it miserable, and vied with each other in the skill and dexterity with which they applied to it the most degrading and insulting epithets. These circumstances, with others, in regard to their [184] moral character, which I shall not even mention, have tended very considerably to lower the estimation in which I have always held the red man of the forest, and serve to strengthen the opinion which I had long since formed, that nothing but the introduction of civilization, with its good and wholesome laws, can ever render the Indian of service to himself, or raise him from the state of wretchedness which has so long characterized his expiring race.

The next morning, we ran down into Baker's bay, and anchored within gunshot of the cape, when Captain Lambert and myself went on shore in the boat, to examine the channel, and decide upon the prospect of getting out to sea. This passage is a very dangerous one, and is with reason dreaded by mariners. A wide bar of sand extends from Cape Disappointment to the opposite shore,—called Point Adams,—and with the exception of a space, comprehending about half a mile, the sea at all times breaks furiously, the surges dashing to the height of the mast head of a ship, and with the most terrific roaring.<sup>95</sup> Sometimes the water in the channel is agitated equally with that which covers the whole length of the bar, and it is then a matter of imminent risk to attempt a passage. Vessels have occasionally been compelled to lie in under the cape for several weeks, in momentary expectation of the subsidence of the dangerous breakers, and they have not unfrequently been required to stand off shore, from without.

<sup>95</sup> For Cape Disappointment, and Point Adams, consult Franchère's *Narrative*, in our volume vi, p. 233, notes 36, 37.—ED.

until the crews have suffered extremely for food and water. This circumstance must ever form a barrier to a permanent settlement here; the sands, which compose the bar, are constantly shifting, and changing the course and depth of the channel, so that none but the small coasting vessels in the service of the company can, with much safety, pass back and forth.

Mr. N. and myself visited the sea beach, outside the cape, in the hope of finding peculiar marine shells, but although we [185] searched assiduously during the morning, we had but little success. We saw several deer in the thick forest on the side of the cape, and a great number of black shags, or cormorants, flying over the breakers, and resting upon the surf-washed rocks.

On the morning of the 11th, Mr. Hanson, the mate, returned from the shore, and reported that the channel was smooth; it was therefore deemed safe to attempt the passage immediately. While we were weighing our anchor, we descried a brig steering towards us, which soon crossed the bar, and ran up to within speaking distance. It was one of the Hudson's Bay Company's coasters, and, as we were getting under way, a boat put off from her, and we were boarded by Mr. Ogden, a chief factor from one of the Company's forts on the coast.<sup>99</sup> He informed us that the brig left Naas about the first of October, but had been delayed by contrary winds, and rough, boisterous

---

<sup>99</sup> Peter Skeen Ogden was the son of Isaac, chief justice of the Province of Quebec — originally a loyalist from New York. Early entering the fur-trade, young Ogden was sent out to Astoria, arriving after its transference to the British. He thereupon entered the North West Company, and spent his life in the Oregon country. A successful trapper and trader, he led for many years parties into the interior, where he explored the Yellowstone and Lewis River countries, and Utah, giving his name to Ogden's Hole and the Utah city therein. In 1825 he had a disastrous encounter with Ashley, and from that time onward competition with American traders was keen. He followed Jedidiah S. Smith west to California, trapping on the upper Sacramento and discovering Ogden River — which Fré-

weather.<sup>100</sup> Thus the voyage which usually requires but about eight days for its performance, occupied upwards of *two months*. They had been on an allowance of a pint of water per day, and had suffered considerably for fresh provision. Mr. Ogden remained with us but a short time, and we stood out past the cape.

When we entered the channel, the water which had before been so smooth, became suddenly very much agitated, swelling, and roaring, and foaming around us, as if the surges were upheaved from the very bottom, and as [if] our vessel would fall in the trough of the sea, pitching down like a huge leviathan seeking its native depths, I could not but feel positive, that the enormous wave, which hung like a judgment over our heads, would inevitably engulf us; but the good ship, like a creature instinct with life, as though she knew her danger, gallantly rose upon it, and but dipped her bows into its crest, as if in scorn of its mighty and irresistible power. This is my first sea voyage, and every thing upon the great deep is of course novel and interesting to me. During the scene which I have just described, although I was [186] aware of our imminent peril, and the tales that I had frequently heard of vessels perishing in this very spot, and in precisely such a sea, recurred to my mind with some force, yet I could not but feel a kind of secret and wild joy at finding myself in a situation of such awful and magnificent grandeur. I thought of the lines of Shelley, and repeated them to myself in a kind of ecstasy.

mont renamed Humboldt. In 1835 Ogden was appointed chief factor of New Caledonia, and made his headquarters at Fort St. James, on Stuart Lake. Ogden married Julia, daughter of a Flathead chief, and her intrepidity and understanding of Indian nature aided her husband's undertakings. He died at Oregon City in 1854, aged about sixty years.— ED.

<sup>100</sup> Nass Bay and Harbor, in upper British Columbia, near the Alaska boundary.— ED.

“ And see’st thou, and hear’st thou,  
And fear’st thou, and fear’st thou,  
And ride we not free  
O’er the terrible sea,  
I and thou ? ”

In about twenty minutes we had escaped all the danger, and found ourselves riding easily in a beautiful placid sea. We set the sails, which had been shortened on the bar, and the gallant vessel feeling the impulse of the wind, rushed ahead as if exulting in the victory she had achieved.

. . . . .

## CHAPTER XII

. . . Arrival at the Columbia.

[217] On the 15th,<sup>101</sup> the wind, which had for several days been light, began steadily to increase, until we were running ten knots by the log. In the afternoon, the atmosphere became thick and hazy, indicating our approach to the shores of the continent. In a short time, a number of the small Auks,—of which we saw a few immediately after leaving the Columbia,—were observed sporting in the waves, close under our bows; then several gulls of the species common on the river, and soon after large flocks of geese and canvass-back ducks.

The sea gradually lost its legitimate deep blue color, and assumed a dirty, green appearance, indicating soundings. Upon heaving the lead here, we got only eleven fathoms, and found that we had approached nearer than was prudent, having been misled by the haze. Wore ship immediately, and soon saw land, bearing east, which we ascertained to be south of Cape Disappointment. Stood off during the night, and the next morning at 4 o'clock, the wind favoring us, we bore up for the cape, and at 7 crossed the dangerous bar safely, and ran direct for the river.

---

<sup>101</sup> This date is April 15, 1835. The interval between this and December 11, 1834 (the part omitted) was spent in a visit to the Hawaiian Islands. Townsend returned on Wyeth's vessel, the "May Dacre."—ED.

## [218] CHAPTER XIII

Passage up the Columbia — Birds — A trip to the Wallamet — Methodist missionaries — their prospects — Fort William — Band-tail pigeons — Wretched condition of the Indians at the falls — A Kallapooyah village — Indian cemetery — Superstitions — Treatment of diseases — Method of steaming — “ Making medicine ” — Indian sorcerers — An interruption of festivities — Death of Thornburg — An inquest — Verdict of the jury — Inordinate appetite for ardent spirits — Misfortunes of the American Company — Eight men drowned — Murder of two trappers by the Banneck Indians — Arrival of Captain Thing — His meeting and skirmish with the Black-foot Indians — Massacre — A narrow escape.

ON the 16th, we anchored abreast of Oak point.<sup>102</sup> Our decks were almost immediately crowded with Indians to welcome us, and among them we recognised many faces with which we were familiar. *Chinamus*, the Chinook chief, was the principal of these, who, with his wife, *Aillapust*, or *Sally*, as she is called at the fort, paid us an early visit, and brought us red deer and sturgeon to regale upon after our voyage.

On the afternoon of the next day, we ran up to Warrior's point, the brig's old mooring ground. The people here had been anxious to see us; extensive preparations had been made to prosecute the salmon fishery, and the coopers have been engaged the whole winter in making barrels to accommodate them. Mr. Walker, the missionaries' quondam associate, was in charge of the post, and he informed us that Captain Wyeth had returned only a few weeks since from the upper country, where he had been spending the winter, engaged in the arduous business of [219] trap-

---

<sup>102</sup> For a brief account of Oak Point, see Franchère's *Narrative* in our volume vi, p. 261, note 74.— ED.

ping, in the prosecution of which he had endured great and various hardships.<sup>103</sup>

May 12th.— The rainy season is not yet over; we have had almost constant showers since we arrived, but now the weather appears settled. Birds are numerous, particularly the warblers, (*Sylvia*.) Many of these are migratory, remaining but a few weeks: others breed here, and reside during the greater part of the summer. I have already procured several new species.

20th.— Mr. Wyeth, came down from Walla-walla yesterday, and this morning I embarked with him in a large canoe, manned by Kanakas, for a trip to the Wallamet falls in order to procure salmon. We visited fort William, (Wyeth's new settlement upon Wappatoo island,) which is about fifteen miles from the lower mouth of the Wallamet.<sup>104</sup> We found here the missionaries, Messrs. Lee and Edwards, who arrived to-day from their station, sixty miles above. They give flattering accounts of their prospects here; they are surrounded by a considerable number of Indians who are friendly to the introduction of civilization and religious light, and who treat them with the greatest hospitality and kindness. They have built several comfortable log houses, and the soil in their vicinity they represent as unusually rich and productive. They have, I think, a good prospect of being serviceable to this miserable and degraded people; and if they commence their operations judiciously, and pursue a steady, unwavering

<sup>103</sup> Captain Wyeth returned to Fort Vancouver February 12, 1835. The journal of his hardships during this trapping expedition is in his *Oregon Expeditions*, pp. 234-250.— ED.

<sup>104</sup> According to Wyeth's statements, Fort William was eight miles from Vancouver, on the southwest side of the island. Built in the spring of 1835, it was upon Wyeth's return to the United States (1836) left in charge of C. M. Walker, who came out with Jason Lee. Walker was given instructions to lease the place, but no tenant offering, it was soon abandoned, and the Hudson's Bay Company established a dairy farm near the site.— ED.

course, the Indians in this section of country may yet be redeemed from the thralldom of vice, superstition, and indolence, to which they have so long submitted, and above which their energies have not enabled them to rise.

The spot chosen by Captain W. for his fort is on a high piece of land, which will probably not be overflowed by the periodical freshets, and the soil is the rich black loam so plentifully distributed through this section of country. The men now live in tents and temporary huts, but several log houses are constructing [220] which, when finished, will vie in durability and comfort with Vancouver itself.

21st.—The large band-tail pigeon (*Colomba fasciata*) is very abundant near the river, found in flocks of from fifty to sixty, and perching upon the dead trees along the margin of the stream. They are feeding upon the buds of the balsam poplar; are very fat, and excellent eating. In the course of the morning, and without leaving the canoe, I killed enough to supply our people with provision for two days.

24th.—We visited the falls to-day, and while Captain W. was inspecting the vicinity to decide upon the practicability of drawing his seine here, I strolled into the Indian lodges on the bank of the river. The poor creatures were all living miserably, and some appeared to be suffering absolute want. Those who were the best supplied, had nothing more than the fragments of a few sturgeons and lamprey eels, kamas bread, &c. To the roofs of the lodges were hung a number of crooked bladders, filled with rancid seal oil, used as a sort of condiment with the dry and unsavory sturgeon.

On the Klakamas river,<sup>105</sup> about a mile below, we found

---

<sup>105</sup> Clackamas River rises in the Cascade Range, between Mounts Hood and Jefferson, and flows northwest through a county of the same name into the Willamette, at the present Oregon City.—ED.

a few lodges belonging to Indians of the Kalapooyah tribe. We addressed them in Chinook, (the language spoken by all those inhabiting the Columbia below the cascades,) <sup>106</sup> but they evidently did not comprehend a word, answering in a peculiarly harsh and guttural language, with which we were entirely unacquainted. However, we easily made them understand by signs that we wanted salmon, and being assured in the same significant manner that they had none to sell, we decamped as soon as possible, to escape the fleas and other vermin with which the interior of their wretched habitations were plentifully supplied. We saw here a large Indian cemetery. The bodies had been buried under the ground, and each tomb had a board at its head, upon which was rudely painted some strange, uncouth figure. The [221] pans, kettles, clothing, &c., of the deceased, were all suspended upon sticks, driven into the ground near the head board.

*June 6th.*—The Indians frequently bring us salmon, and we observe that, invariably, before they part with them, they are careful to remove the hearts. This superstition, is religiously adhered to by all the Chinook tribe. Before the fish is split and prepared for eating, a small hole is made in the breast, the heart taken out, roasted, and eaten in silence, and with great gravity. This practice is continued only during the first month in which the salmon make their appearance, and is intended as a kind of propitiation to the particular deity or spirit who presides over the finny tribes. Superstition in all its absurd and most revolting aspects is rife among this people. They believe in “black spirits, and white, blue spirits, and grey,” and to each grizzly monster some peculiar virtue or ghastly

---

<sup>106</sup> On the Chinook jargon—the medium of communication between the whites and Indians of the Northwest coast—see Franchère's *Narrative* in our volume vi, p. 240, note 40.—ED.

terror is attributed. When a chief goes on a hunting or fishing excursion, he puts himself under the care of one of these good spirits, and if his expedition is unsuccessful, he affirms that the antagonist evil principle has gained the victory; but this belief does not prevent his making another, and another attempt, in the hope, each time, that his guardian genius will have the ascendancy.

In their treatment of diseases, they employ but few remedies, and these are generally simple and inefficacious. Wounds are treated with an application of green leaves, and bound with strips of pine bark, and in some febrile cases, a sweat is administered. This is effected by digging a hole two or three feet deep in the ground, and placing within it some hemlock or spruce boughs moistened with water; hot stones are then thrown in, and a frame work of twigs is erected over the opening, and covered closely with blankets to prevent the escape of the steam. Under this contrivance, the patient is placed; and after remaining [222] fifteen or twenty minutes, he is removed, and plunged into cold water.

Their mode of "*making medicine*," to use their own term, is, however, very different from this. The sick man is laid upon a bed of mats and blankets, elevated from the ground, and surrounded by a raised frame work of hewn boards. Upon this frame two "*medicine men*" (sorcerers) place themselves, and commence chaunting, in a low voice, a kind of long drawn, sighing song. Each holds a stout stick, of about four feet long, in his hand, with which he beats upon the frame work, and keeps accurate time with the music. After a few minutes, the song begins to increase in loudness and quickness, (a corresponding force and celerity being given to the stick,) until in a short time the noise becomes almost deafening, and may well serve, in many instances, to accelerate the exit of him whom it is their intention to benefit.

During the administration of the medicine, the relations and friends of the patient are often employed in their usual avocations in the same house with him, and by his bedside; the women making mats, moccasins, baskets, &c., and the men lolling around, smoking or conversing upon general subjects. No appearance of sorrow or concern is manifested for the brother, husband, or father, expiring beside them, and but for the presence and ear-astounding din of the medicine men, you would not know that anything unusual had occurred to disturb the tranquillity of the family circle.

These medicine men are, of course, all impostors, their object being simply the acquisition of property; and in case of the recovery of the patient, they make the most exorbitant demands of his relations; but when the sick man dies, they are often compelled to fly, in order to escape the vengeance of the survivors, who generally attribute the fatal termination to the evil influence of the practitioner.

[223] *July 4th.*—This morning was ushered in by the firing of cannon on board our brig, and we had made preparations for spending the day in festivity, when, at about 9 o'clock, a letter was received from Mr. Walker, who has charge of the fort on Wappatoo island, stating that the tailor, Thornburg, had been killed this morning by Hubbard, the gunsmith, and requesting our presence immediately, to investigate the case, and direct him how to act.

Our boat was manned without loss of time, and Captain L. and myself repaired to the fort, where we found every thing in confusion. Poor Thornburg, whom I had seen but two days previously, full of health and vigor, was now a lifeless corpse; and Hubbard, who was more to be pitied, was walking up and down the beach, with a countenance pale and haggard, from the feelings at war within.

We held an inquest over the body, and examined all the men of the fort severally, for the purpose of eliciting the facts of the case, and, if warranted by the evidence, to exculpate Hubbard from blame in the commission of the act. It appeared that, several weeks since, a dispute arose between Hubbard and Thornburg, and the latter menaced the life of the former, and had since been frequently heard to declare that he would carry the threat into effect on the first favorable opportunity. This morning, before daylight, he entered the apartment of Hubbard, armed with a loaded gun, and a large knife, and after making the most deliberate preparations for an instant departure from the room, as soon as the deed should be committed, cocked his gun, and prepared to shoot at his victim. Hubbard, who was awakened by the noise of Thornburg's entrance, and was therefore on the alert, waited quietly until this crisis, when cocking his pistol, without noise, he took deliberate aim at the assassin, and fired. Thornburg staggered back, his gun fell from his grasp, and the two combatants struggled hand to hand. The tailor, being wounded, [224] was easily overcome, and was thrown violently out of the house, when he fell to the ground, and died in a few minutes. Upon examining the body, we found that the two balls from the pistol had entered the arm below the shoulder, and escaping the bone, had passed into the cavity of the chest. The verdict of the jury was "justifiable homicide," and a properly attested certificate, containing a full account of the proceedings, was given to Hubbard, as well for his satisfaction, as to prevent future difficulty, if the subject should ever be investigated by a judicial tribunal.

This Thornburg was an unusually bold and determined man, fruitful in inventing mischief, as he was reckless and daring in its prosecution. His appetite for ardent spirits

was of the most inordinate kind. During the journey across the country, I constantly carried a large two-gallon bottle of whiskey, in which I deposited various kinds of lizards and serpents and when we arrived at the Columbia the vessel was almost full of these crawling creatures. I left the bottle on board the brig when I paid my first visit to the Wallammet falls, and on my return found that Thornburg had decanted the liquor from the precious reptiles which I had destined for immortality, and he and one of his pot companions had been "happy" upon it for a whole day. This appeared to me almost as bad as the "tapping of the Admiral," practised with such success by the British seamen; but unlike their commander, I did not discover the theft until too late to save my specimens, which were in consequence all destroyed.

11th.—Mr. Nuttall, who has just returned from the dalles, where he has been spending some weeks, brings distressing intelligence from above. It really seems that the "Columbia River Fishing and Trading Company" is devoted to destruction; disasters meet them at every turn, and as yet none of their schemes have prospered. This has not been for want of energy or exertion. Captain W. has pursued the plans which seemed [225] to him best adapted for insuring success, with the most indefatigable perseverance and industry, and has endured hardships without murmuring, which would have prostrated many a more robust man; nevertheless, he has not succeeded in making the business of fishing and trapping productive, and as we cannot divine the cause, we must attribute it to the Providence that rules the destinies of men and controls all human enterprises.

Two evenings since, eight Sandwich Islanders, a white man and an Indian woman, left the cascades in a large canoe laden with salmon, for the brig. The river was

as usual rough and tempestuous, the wind blew a heavy gale, the canoe was capsized, and eight out of the ten sank to rise no more. The two who escaped, islanders, have taken refuge among the Indians at the village below, and will probably join us in a few days.

Intelligence has also been received of the murder of one of Wyeth's principal trappers, named Abbot, and another white man who accompanied him, by the Banneck Indians. The two men were on their way to the Columbia with a large load of beaver, and had stopped at the lodge of the Banneck chief, by whom they had been hospitably entertained. After they left, the chief, with several of his young men, concealed themselves in a thicket, near which the unsuspecting trappers passed, and shot and scalped them both.

These Indians have been heretofore harmless, and have always appeared to wish to cultivate the friendship of the white people. The only reason that can be conceived for this change in their sentiments, is that some of their number may lately have received injury from the white traders, and, with true Indian animosity, they determined to wreak their vengeance upon the whole race. Thus it is always unsafe to travel among Indians, as no one [226] knows at what moment a tribe which has always been friendly, may receive ill treatment from thoughtless, or evil-designing men, and the innocent suffer for the deeds of the guilty.

*August 19th.*— This morning, Captain Thing (Wyeth's partner) arrived from the interior. Poor man! he looks very much worn by fatigue and hardships, and seven years older than when I last saw him. He passed through the Snake country from Fort Hall, without knowing of the hostile disposition of the Bannecks, but, luckily for him, only met small parties of them, who feared to attack his camp. He

remarked symptoms of distrust and coolness in their manner, for which he was, at the time, unable to account. As I have yet been only an hour in his company, and as a large portion of this time was consumed in his business affairs, I have not been able to obtain a very particular account of his meeting and skirmish with the Blackfeet last spring, a rumor of which we heard several weeks since. From what I have been enabled to gather, amid the hurry and bustle consequent upon his arrival, the circumstances appear to be briefly these. He had made a camp on Salmon river, and, as usual, piled up his goods in front of it, and put his horses in a pen erected temporarily for the purpose, when, at about daybreak, one of his sentries heard a gun discharged near. He went immediately to Captain T.'s tent to inform him of it, and at that instant a yell sounded from an adjacent thicket, and about five hundred Indians,—three hundred horse and two hundred foot,—rushed out into the open space in front. The mounted savages were dashing to and fro across the line of the camp, discharging their pieces with frightful rapidity, while those who had not horses, crawled around to take them in the rear.

Notwithstanding the galling fire which the Indians were constantly pouring into them, Captain T. succeeded in driving his horses into the thicket behind, and securing them there, placing over them a guard of three men as a check to the savages who [227] were approaching from that quarter. He then threw himself with the remainder of his little band, behind the bales of goods, and returned the fire of the enemy. He states that occasionally he was gratified by the sight of an Indian tumbling from his horse, and at such times a dismal, savage yell was uttered by the rest, who then always fell back a little, but returned immediately to the charge with more than their former fury.

At length the Indians, apparently wearied by their unsuc-

cessful attempts to dislodge the white men, changed their mode of attack, and rode upon the slight fortification, rapidly and steadily. Although they lost a man or two by this (for them) unusually bold proceeding, yet they succeeded in driving the brave little band of whites to the cover of the bushes. They then took possession of the goods, &c., which had been used as a defence, and retired to a considerable distance, where they were soon joined by their comrades on foot, who had utterly failed in their attempt to obtain the horses. In a short time, a man was seen advancing from the main body of Indians towards the scene of combat, holding up his hand as a sign of amity, and an intimation of the suspension of hostilities, and requested a "talk" with the white people. Captain T., with difficulty repressing his inclination to shoot the savage herald down, was induced, in consideration of the safety of his party, to dispatch an interpreter towards him. The only information that the Blackfeet wished to communicate was, that having obtained all the goods of the white people, they were now willing that they should continue their journey in peace, and that they should not again be molested. The Indians then departed, and the white men struck back on their trail, towards Fort Hall. Captain Thing lost every thing he had with him, all his clothing, papers, journals, &c. But he should probably be thankful that he escaped with his life, for [228] it is known to be very unusual for these hostile Indians to spare the lives of white men, when in their power, the acquisition of property being generally with them only a secondary consideration.

Captain T. had two men severely, but not mortally, wounded. The Indians had seven killed, and a considerable number wounded.

*20th.*—Several days since a poor man came here in a most deplorable condition, having been gashed, stabbed,

and bruised in a manner truly frightful. He had been travelling on foot constantly for fifteen days, exposed to the broiling sun, with nothing to eat during the whole of this time, except the very few roots which he had been able to find. He was immediately put in the hospital here, and furnished with every thing necessary for his comfort, as well as surgical attendance. He states that he left Monterey, in California, in the spring, in company with seven men, for the purpose of coming to the Wallammet to join Mr. Young, an American, who is now settled in that country.<sup>107</sup> They met with no accident until they arrived at a village of *Potámeos* Indians,<sup>108</sup> about ten days journey south of this. Not knowing the character of these Indians, they were not on their guard, allowing them to enter their camp, and finally to obtain possession of their weapons.<sup>109</sup> The Indians then fell upon the defenceless little band with their tomahawks and knives, (having no fire arms themselves, and not knowing the use of those they had taken,) and, ere the white men had recovered from the panic which the sudden and unexpected attack occasioned, killed four

---

<sup>107</sup> This was a party arranged by John Turner, who had previously visited Oregon with Jedidiah S. Smith. For Ewing Young, see our volume xx, p. 23, note 2. The wounded man was Dr. William J. Bailey, an Englishman who, after being educated for a physician, enlisted as a sailor, and after much roving had been a year or two in California. On recovering from his wounds, he settled in Willamette valley, married Margaret Smith, a mission teacher, and had a large farm and an important practice. Bailey became a man of note in early Oregon history, was a member of the executive committee of the provisional government in 1844, and died at Champoeg in 1876.—ED.

<sup>108</sup> Called by the inhabitants of this country, the "*rascally Indians*," from their uniformly evil disposition, and hostility to white people.—TOWNSEND.

<sup>109</sup> The Loloten or Tototen tribe of Klamath Indians. From their hostile and thievish disposition, their habitat was styled Rogue River, and they are usually spoken of as Rogue River Indians. The river is in southwestern Oregon, and the tribe related to those of northern California. Trouble arose between this tribe and the miners, lasting from 1850 to 1854, in which several battles were fought. There were in 1903 but fifty-two survivors, on Grande Ronde Reservation, in western Oregon.—ED.

of them. The remaining four fought with their knives as long as they were able, but were finally overpowered, and this poor fellow left upon the ground, covered with wounds, and in a state [229] of insensibility. How long he remained in this situation, he has no means of ascertaining; but upon recovering, the place was vacated by all the actors in the bloody scene, except his three dead companions, who were lying stark and stiff where they fell. By considerable exertion, he was enabled to drag himself into a thicket near, for the purpose of concealment, as he rightly conjectured that their captors would soon return to secure the trophies of their treacherous victory, and bury the corpses. This happened almost immediately after; the scalps were torn from the heads of the slain, and the mangled bodies removed for interment. After the most dreadful and excruciating sufferings, as we can well believe, the poor man arrived here, and is doing well under the excellent and skilful care of Doctor Gairdner.<sup>110</sup> I examined most of his wounds yesterday. He is literally covered with them, but one upon the lower part of his face is the most frightful. It was made by a single blow of a tomahawk, the point of which entered the upper lip, just below the nose, cutting entirely through both the upper and lower jaws and chin, and passing deep into the side of the neck, narrowly missing the large jugular vein. He says he perfectly recollects receiving this wound. It was inflicted by a powerful savage, who at the same time tripped him with his foot, accelerating his fall. He also remembers distinctly feeling the Indian's long knife pass

---

<sup>110</sup> Dr. Gairdner was a young English physician and scientist who had studied with Ehrenberg, in Germany, and Sir William Hooker, in Scotland. Under the patronage of the latter he had come as physician to Fort Vancouver. He died in Hawaii, whither he had gone for his health. His name is perpetuated in that of one of the Columbia salmon.—ED.

five separate times into his body; of what occurred after this he knows nothing. This is certainly by far the most horrible looking wound I ever saw, rendered so, however, by injudicious treatment and entire want of care in the proper apposition of the sundered parts; he simply bound it up as well as he could with his handkerchief, and his extreme anguish caused him to forget the necessity of accuracy in this respect. The consequence is, that the lower part of his face is dreadfully contorted, one side being considerably lower than the other. A union by the [230] first intention has been formed, and the ill-arranged parts are uniting.

This case has produced considerable excitement in our little circle. The Potámeos have more than once been guilty of acts of this kind, and some of the gentlemen of the fort have proposed fitting out an expedition to destroy the whole nation, but this scheme will probably not be carried into effect.

## [231] CHAPTER XIV

Indians of the Columbia — their melancholy condition — Departure of Mr. Nuttall and Dr. Gairdner — A new vocation — Arrival of the Rev. Samuel Parker — his object — Departure of the American brig — Swans — Indian mode of taking them — A large wolf — An Indian mummy — A night adventure — A discovery, and restoration of stolen property — Fraternal tenderness of an Indian — Indian vengeance — Death of Waskéma, the Indian girl — “Busybody,” the little chief — A village of Kowalitsk Indians — Ceremony of “making medicine” — Exposure of an impostor — Success of legitimate medicines — Departure from Fort Vancouver for a visit to the interior — Arrival of a stranger — “Cape Horn” — Tilki, the Indian chief — Indian villages — Arrival at Fort Walla-walla — Sharp-tailed grouse — Commencement of a journey to the Blue mountains.

THE Indians of the Columbia were once a numerous and powerful people; the shore of the river, for scores of miles, was lined with their villages; the council fire was frequently lighted, the pipe passed round, and the destinies of the nation deliberated upon. War was declared against neighboring tribes; the deadly tomahawk was lifted, and not buried until it was red with the blood of the savage; the bounding deer was hunted, killed, and his antlers ornamented the wigwam of the red man; the scalps of his enemies hung drying in the smoke of his lodge, and the Indian was happy. Now, alas! where is he? — gone; — gathered to his fathers and to his happy hunting grounds; his place knows him no more. The spot where once stood the thickly peopled village, the smoke curling and wreathing above the closely packed lodges, the lively children playing in the front, and their indolent [232] parents lounging on their mats, is now only indicated by a heap of undistinguishable ruins. The depopulation here has been truly fearful. A gentleman told me, that only four years ago, as he wandered near what had formerly

been a thickly peopled village, he counted no less than sixteen dead, men and women, lying unburied and festering in the sun in front of their habitations. Within the houses all were sick; not one had escaped the contagion; upwards of a hundred individuals, men, women, and children, were writhing in agony on the floors of the houses, with no one to render them any assistance. Some were in the dying struggle, and clenching with the convulsive grasp of death their disease-worn companions, shrieked and howled in the last sharp agony.

Probably there does not now exist one, where, five years ago, there were a hundred Indians; and in sailing up the river, from the cape to the cascades, the only evidence of the existence of the Indian, is an occasional miserable wigwam, with a few wretched, half-starved occupants. In some other places they are rather more numerous; but the thoughtful observer cannot avoid perceiving that in a very few years the race must, in the nature of things, become extinct; and the time is probably not far distant, when the little trinkets and toys of this people will be picked up by the curious, and valued as mementoes of a nation passed away for ever from the face of the earth. The aspect of things is very melancholy. It seems as if the fiat of the Creator had gone forth, that these poor denizens of the forest and the stream should go hence, and be seen of men no more.<sup>111</sup>

In former years, when the Indians were numerous, long after the establishment of this fort, it was not safe for the

---

<sup>111</sup> When Lewis and Clark visited the Columbia (1805-06), they noted signs of a declining population, and thought it due to an epidemic of small-pox that a few years before had decimated the native population. In 1829, shortly after the ground had been broken for a farm at Fort Vancouver, a form of intermittent fever broke out among both white men and Indians. To the latter it proved deadly, and for three years raged without abatement. This epidemic had occasioned the desolation noted by Townsend.— ED.

white men attached to it to venture beyond the protection of its guns without being fully armed. Such was the jealousy of the natives towards them, that various deep laid schemes were practised to obtain possession of the post, and massacre all whom it had harbored; [233] now, however, they are as submissive as children. Some have even entered into the services of the whites, and when once the natural and persevering indolence of the man is worn off, he will work well and make himself useful.

About two hundred miles southward, the Indians are said to be in a much more flourishing condition, and their hostility to the white people to be most deadly. They believe that we brought with us the fatal fever which has ravaged this portion of the country, and the consequence is, that they kill without mercy every white man who trusts himself amongst them.

*October 1st.*—Doctor Gairdner, the surgeon of Fort Vancouver, took passage a few days ago to the Sandwich Islands, in one of the Company's vessels. He has been suffering for several months, with a pulmonary affection, and is anxious to escape to a milder and more salubrious climate. In his absence, the charge of the hospital will devolve on me, and my time will thus be employed through the coming winter. There are at present but few cases of sickness, mostly ague and fever, so prevalent at this season. My companion, Mr. Nuttall, was also a passenger in the same vessel. From the islands, he will probably visit California, and either return to the Columbia by the next ship, and take the route across the mountains, or double Cape Horn to reach his home.

*16th.*—Several days since, the Rev. Samuel Parker, of Ithaca, N. York, arrived at the fort. He left his home last May, travelled to the rendezvous on the Colorado, with the fur company of Mr. Fontinelle, and performed

the remainder of the journey with the Nez Percé or Cheap-tin Indians. His object is to examine the country in respect to its agricultural and other facilities, with a view to the establishment of missions among the Indians.<sup>112</sup> He will probably return to the States next spring, and report the [234] result of his observations to the board of commissioners, by whose advice his pioneer journey has been undertaken.<sup>113</sup>

On the 17th, I embarked with this gentleman in a canoe, for a visit to the lower part of the river. We arrived at the American brig in the afternoon, on board of which we quartered for the night, and the next morning early, the vessel cast off from the shore. She has her cargo of furs and salmon on board, and is bound to Boston, via the Sandwich and Society Islands. Mr. Parker took passage in her to Fort George, and in the afternoon I returned in my canoe to Vancouver.<sup>114</sup>

*December 1st.*—The weather is now unusually fine. Instead of the drenching rains which generally prevail during the winter months, it has been for some weeks clear and cool, the thermometer ranging from 35° to 45°.

<sup>112</sup> Reverend Samuel Parker was born in New Hampshire (1779); educated at Williams and Andover, he settled at Ithaca, where he died in 1866. At the meeting of the American Board of Commissioners for Foreign Missions (1834), the subject of an Oregon mission was discussed and Parker appointed to make investigations. Arriving at St. Louis too late for the annual brigade, he returned home, only to come out the succeeding year in company with Marcus Whitman. At the Green River rendezvous, Whitman went back for reinforcements, but Parker pushed on, with Nez Percés as his sole companions, as far as Fort Walla Walla, where he arrived October 6, 1835. He remained in Oregon until June, 1836, then embarked for Hawaii, reaching home in May, 1837.—ED.

<sup>113</sup> Mr. Parker has since published an account of this tour, to which the reader is referred, for much valuable information, relative to the condition of the Indians on our western frontier.—TOWNSEND.

*Comment by Ed.* *The Journal of an Exploring Tour beyond the Rocky Mountains* (Ithaca, 1838). Five American editions and one English appeared. The popularity of the work was considerable, and it spread information concerning the Oregon country.

<sup>114</sup> This was Wyeth's vessel, the "May Dacre."—ED.

The ducks and geese, which have swarmed throughout the country during the latter part of the autumn, are leaving us, and the swans are arriving in great numbers. These are here, as in all other places, very shy; it is difficult to approach them without cover; but the Indians have adopted a mode of killing them which is very successful; that of drifting upon the flocks at night, in a canoe, in the bow of which a large fire of pitch pine has been kindled. The swans are dazzled, and apparently stupefied by the bright light, and fall easy victims to the craft of the sportsman.

20th.—Yesterday one of the Canadians took an enormous wolf in a beaver-trap. It is probably a distinct species from the common one, (*lupus*,) much larger and stronger, and of a yellowish cinereous color.<sup>115</sup> The man states that he found considerable difficulty in capturing him, even after the trap had been fastened on [235] his foot. Unlike the *lupus*, (which is cowardly and cringing when made prisoner,) he showed fight, and seizing the pole in his teeth, with which the man attempted to despatch him, with one backward jerk, threw his assailant to the ground, and darted at him, until checked by the trap chain. He was finally shot, and I obtained his skin, which I have preserved.

I have just had a visit from an old and intelligent Indian chief, who lives near. It is now almost midnight, but for the last hour I have heard the old man wandering about like an unquiet spirit, in the neighborhood of my little mansion, and singing snatches of the wild, but sweetly musical songs of his tribe. It is a bitter night, and supposing the old man might be cold, I invited him to a seat by my comfortable fire.

<sup>115</sup> Probably an individual of what Lewis and Clark call the large brown wolf of the wooded regions of the Columbia (*canis lupus occidentalis*).—ED.

He says, "eighty snows have chilled the earth since *Maniquon* was born." *Maniquon* has been a great warrior; he has himself taken twenty scalps between the rising and setting of the sun. Like most old people, he is garrulous, and, like all Indians, fond of boasting of his warlike deeds. I can sit for hours and hear old *Maniquon* relate the particulars of his numerous campaigns, his ambushes, and his "scrimmages," as old *Hawk-eye* would say. When he once gets into the spirit of it, he springs upon his feet, his old, sunken eyes sparkle like diamonds set in bronze, and he whirls his shrunken and naked arm around his head, as though it still held the deadly tomahawk. But in the midst of his excitement, seeming suddenly to recollect his fallen state, he sinks into his chair.

"*Maniquon* is not a warrior now — he will never raise his axe again — his young men have deserted his lodge — his sons will go down to their graves, and the squaws will not sing of their great deeds."

I have several times heard him speak the substance of these words in his own language, and in one instance he concluded thus:

[236] "And who made my people what they are?" This question was put in a low voice, almost a whisper, and was accompanied by a look so savage and malignant, that I almost quailed before the imbecile old creature. I, however, answered quickly, without giving him time to reply to his own question.

"The Great Spirit, *Maniquon*," pointing with my finger impressively upwards.

"Yes, yes — it *was* the Great Spirit; it was not the *white man*!" I could have been almost angry with the old Indian for the look of deadly hostility with which he uttered these last words, but that I sympathized with his

wounded pride, and pitied his sorrows too much to harbor any other feeling than commiseration for his manifold wrongs.

*February 3d, 1836.*— During a visit to Fort William, last week, I saw, as I wandered through the forest, about three miles from the house, a canoe, deposited, as is usual, in the branches of a tree, some fourteen feet from the ground. Knowing that it contained the body of an Indian, I ascended to it for the purpose of abstracting the skull; but upon examination, what was my surprise to find a perfect, embalmed body of a young female, in a state of preservation equal to any which I had seen from the catacombs of Thebes. I determined to obtain possession of it, but as this was not the proper time to carry it away, I returned to the fort, and said nothing of the discovery which I had made.

That night, at the witching hour of twelve, I furnished myself with a rope, and launched a small canoe, which I paddled up against the current to a point opposite the mummy tree. Here I ran my canoe ashore, and removing my shoes and stockings, proceeded to the tree, which was about a hundred yards from the river. I ascended, and making the rope fast around the body, lowered it gently to the ground; then arranging the fabric which had been displaced, as neatly as the darkness allowed, I descended, and taking the body upon my shoulders, bore it to my [237] canoe, and pushed off into the stream. On arriving at the fort, I deposited my prize in the store house, and sewed around it a large Indian mat, to give it the appearance of a bale of guns. Being on a visit to the fort, with Indians whom I had engaged to paddle my canoe, I thought it unsafe to take the mummy on board when I returned to Vancouver the next day, but left directions with Mr. Walker to stow it away under the hatches of a little schooner, which was running twice a week between the two forts.

On the arrival of this vessel, several days after, I received, instead of the body, a note from Mr. Walker, stating that an Indian had called at the fort, and demanded the corpse. He was the brother of the deceased, and had been in the habit of visiting the tomb of his sister every year. He had now come for that purpose, from his residence near the "*tum-water*," (cascades,) and his keen eye had detected the intrusion of a stranger on the spot hallowed to him by many successive pilgrimages. The canoe of his sister was tenantless, and he knew the spoiler to have been a white man, by the tracks upon the beach, which did not incline inward like those of an Indian.

The case was so clearly made out, that Mr. W. could not deny the fact of the body being in the house, and it was accordingly delivered to him, with a present of several blankets, to prevent the circumstance from operating upon his mind to the prejudice of the white people. The poor Indian took the body of his sister upon his shoulders, and as he walked away, grief got the better of his stoicism, and the sound of his weeping was heard long after he had entered the forest.

25<sup>th</sup>.—Several weeks ago the only son of Ke-ez-a-no, the principal chief of the Chinooks, died.<sup>116</sup> The father was almost distracted with grief, and during the first paroxysm attempted to take the life of the boy's mother, supposing that she had exerted an evil influence over him which had caused his death. She [238] was compelled to fly in consequence, and put herself under the protection of Dr. McLoughlin, who found means to send her to her people below. Disappointed in this scheme of vengeance, the chief determined to sacrifice all whom he thought had ever wronged his son, or treated him with indignity; and

<sup>116</sup> This appears to be the chief mentioned by Franchère in our volume vi, p. 246, and by Ross in our volume vii, p. 118.—ED.

the first victim whom he selected was a very pretty and accomplished Chinook girl, named Waskéma, who was remarkable for the exceeding beauty of her long black hair. Waskéma had been solicited by the boy in marriage, but had refused him, and the matter had been long forgotten, until it was revived in the recollection of the father by the death of his son. Ke-ez-a-no despatched two of his slaves to Fort William. (where the girl was at that time engaged in making moccasins for Mr. W. and where I had seen her a short time previously,) who hid themselves in the neighborhood until the poor creature had embarked in her canoe alone to return to her people, when they suddenly rushed upon her from the forest which skirted the river, and shot two balls through her bosom. The body was then thrown into the water, and the canoe broken to pieces on the beach.

Tapeo the brother of Waskéma delivered to me a letter from Mr. W. detailing these circumstances, and amid an abundance of tears which he shed for the loss of his only and beloved sister, he denounced the heaviest vengeance upon her murderer. These threats, however, I did not regard, as I knew the man would never dare to raise his hand against his chief, but as expression relieves the overcharged heart. I did not check his bursts of grief and indignation.

A few days after this, Ke-ez-a-no himself stalked into my room. After sitting a short time in silence, he asked if I believed him guilty of the murder of Waskéma. I replied that I did, and that if the deed had been committed in my country, he would be hanged. He denied all agency in the matter, and placing one hand upon his bosom, and pointing upwards with the other, called [239] God to witness that he was innocent. For the moment I almost believed his asseverations; but calling to mind the strong and undeniable evidence against him, with a feeling of

horror and repugnance, I opened the door and bowed him out of the house.

*March 1st.*— There is an amusing little Indian living in this neighborhood, who calls himself, "*tanas tie*," (little chief,) and he is so probably in every sense of the term. In person, he stands about four feet six, in his moccasins; but no exquisite in the fashionable world, no tinselled dandy in high life, can strut and stamp, and fume with more dignity and self consequence. His name, he says, is Quâlaskin; but in the fort, he is known by the cognomen of "*busy body*," from his restless anxiety to pry into every body's business, and his curiosity to know the English name of every article he sees; *ikata ookook?*— *ikata ookook?* (what is this?— what is this?) *kahtah pasiooks yahhalle?* (what is its English name?) are expressions which he is dinning in your ears, whenever he enters a room in the fort. If you answer him, he attempts the pronunciation after you, and it is often not a little ludicrous. He is evidently proud of the name the white people have given him. not understanding its import, but supposing it to be a title of great honor and dignity. If he is asked his Indian name, he answers very modestly. Quâlaskin. (muddy river,) but if his *pasiooks yahhalle* is required, he puffs up his little person to its utmost dimensions, and tells you with a simper of pride and self complacency, that it is "*mizzy moddy*."

*16th.*— Doctor W. F. Tolmie, one of the surgeons of the Hudson's Bay Company, has just arrived from Fort Langley, on the coast, and has relieved me of the charge of the hospital, which will afford me the opportunity of peregrinating again in pursuit of specimens.<sup>117</sup> The spring

<sup>117</sup> Dr. William Fraser Tolmie was born in Inverness, educated at Glasgow, and joined (1832) the Hudson's Bay Company as a physician. The following spring he arrived at Vancouver by way of Cape Horn, and was sent north to the

is just opening, the birds are arriving, the plants are starting from the ground, and in a few weeks, the wide prairies of the Columbia will appear like the richest flower gardens.

[240] *May 13th.*—Two days ago I left the fort, and am now encamped on a plain below Warrior's point. Near me are several large lodges of Kowalitsk Indians;<sup>118</sup> in all probably one hundred persons. As usual, they give me some trouble by coming around and lolling about my tent, and importuning me for the various little articles that they see. My camp-keeper, however, (a Klikatat,) is an excellent fellow, and has no great love for Kowalitsk Indians, so that the moment he sees them becoming troublesome, he clears the coast, *sans ceremonie*. There is in one of the lodges a very pretty little girl, sick with intermittent fever; and to-day the "medicine man" has been exercising his functions upon the poor little patient; pressing upon its stomach with his brawny hands until it shrieked with the pain, singing and muttering his incantations, whispering in its ears, and exhorting the evil spirit to pass out by the door, &c. These exhibitions would be laughable did they not involve such serious consequences, and for myself I always feel so much indignation against the unfeeling impostor who operates, and pity for the deluded creatures who submit to it, that any emotions but those of risibility are excited.

---

Puget Sound region with a party engaged in planting a new post. There he remained until the return noted by Townsend. He lived at Fort Vancouver and vicinity until 1841. A visit to England (1841-43) was made in the interest of the Puget Sound Agricultural Company, of which Tolmie was superintendent at Fort Nisqually (1843-59). Upon the final cession of all the territory to the United States, Dr. Tolmie removed to Victoria, British Columbia, where he was still living in 1878.

Fort Langley was founded in 1827 upon the left bank of the Fraser River, about thirty miles above its mouth.—ED.

<sup>118</sup> For the habitat of this tribe, see Franchère's *Narrative*, in our volume vi, p. 245, note 49.—ED.

I had a serious conversation with the father of this child, in which I attempted to prove to him, and to some twenty or thirty Indians who were squatted about the ground near, that the "medicine man" was a vile impostor, that he was a fool and a liar, and that his manipulations were calculated to increase the sufferings of the patient instead of relieving them. They all listened in silence, and with great attention to my remarks, and the wily conjurer himself had the full benefit of them: he stood by during the whole time, assuming an expression of callous indifference which not even my warmest vituperations could affect. Finally I offered to exhibit the strongest proof of the truth of what I had been saying, by pledging myself to cure the child in three days, provided the "medicine man" was dismissed without delay. This, the father told me, required some consideration [241] and consultation with his people, and I immediately left the lodge and took the way to my camp, to allow them an opportunity of discussing the matter alone.

Early next morning the Indian visited me, with the information that the "medicine man" had departed, and he was now anxious that I should make trial of my skill. I immediately administered to the child an active cathartic, followed by sulphate of quinine, which checked the disease, and in two days the patient was perfectly restored.

In consequence of my success in this case, I had an application to administer medicine to two other children similarly affected. My stock of quinine being exhausted, I determined to substitute an extract of the bark of the dogwood, (*Cornus Nuttalli*), and taking one of the parents into the wood with his blanket, I soon chipped off a plentiful supply, returned, boiled it in his own kettle, and completed the preparation in his lodge, with most of the Indians standing by, and staring at me, to comprehend the process.

This was exactly what I wished; and as I proceeded, I took some pains to explain the whole matter to them, in order that they might at a future time be enabled to make use of a really valuable medicine, which grows abundantly every where throughout the country. I have often thought it strange that the sagacity of the Indians should not long ago have made them acquainted with this remedy; and I believe, if they had used it, they would not have had to mourn the loss of hundreds, or even thousands of their people who have been swept away by the demon of ague and fever.

I administered to each of the children about a scruple of the extract per day. The second day they escaped the paroxysm, and on the third were entirely well.

*June 26th.*—I left Vancouver yesterday, with the summer brigade, for a visit to Walla-walla, and its vicinity. The gentlemen [242] of the party are, Peter Ogden, Esq., chief factor, bound to New Caledonia, Archibald McDonald, Esq., for Colville, and Samuel Black, Esq., for Thompson's river, and the brigade consists of sixty men, with nine boats.<sup>119</sup>

---

<sup>119</sup> Archibald McDonald was a Hudson's Bay officer who had been in charge of forts in the Thompson River district (1822-26), when he became chief factor for Kamloops. In 1828 he was chosen to accompany Sir George Simpson in a transmontane tour, and his diary thereof was published as *Peace River: A Canoe Voyage from Hudson Bay to the Pacific* (Ottawa, 1872). On this expedition he was left in charge of the newly-built Fort Langley, where he remained about eight years, constructing Fort Nisqually on Puget Sound (1833). In 1836 he was appointed to Fort Colville, where he remained for many years. This post was on the upper Columbia, not far from Kettle Falls, in the present state of Washington; built in 1825, it was maintained by the Hudson's Bay Company until the discovery of gold in that region (1858), whereupon the stockade was removed across the border into British Columbia, to avoid United States customs duties.

Samuel Black had been a North West Company trader; but later was placed in charge of Hudson's Bay posts at Fort Dunvegan (1823) and at Walla Walla (1828). He commanded at Fort Kamloops (see our volume vii, p. 199, note 64), on Thompson's River for some years, before his murder (1841) by a neighboring native.—ED.

27th.—We arrived yesterday at the upper cascades, and made in the course of the day three portages. As is usual in this place, it rained almost constantly, and the poor men engaged in carrying the goods, were completely drenched. A considerable number of Indians are employed here in fishing, and they supply us with an abundance of salmon. Among them I recognise many of my old friends from below.

29th.—This morning the Indian wife of one of the men gave birth to a little girl. The tent in which she was lying was within a few feet of the one which I occupied, and we had no intimation of the matter being in progress until we heard the crying of the infant. It is truly astonishing with what ease the parturition of these women is performed; they generally require no assistance in delivery, being fully competent to manage the whole paraphernalia themselves. In about half an hour after this event we got under way, and the woman walked to the boat, carrying her new born infant on her back, embarked, laughed, and talked as usual, and appeared in every respect as well as if nothing had happened.

This woman is a most noble specimen of bone and muscle, and so masculine in appearance, that were she to cast the petticoat, and don the breeches, the cheat would never be discovered, and but few of the *lords of the creation* would be willing to face the Amazon. She is particularly useful to her husband. As he is becoming rather infirm, she can protect him most admirably. If he wishes to cross a stream in travelling without horses or boats, she plunges in without hesitation, takes him upon her back, and lands him safely and expeditiously upon the opposite bank. She can also kill and dress an elk, run down and shoot a buffalo, [243] or spear a salmon for her husband's breakfast in the morning, as well as any man-

servant he could employ. Added to all this, she has, in several instances, saved his life in skirmishes with Indians, at the imminent risk of her own, so that he has some reason to be proud of her.

In the afternoon, we passed the bold, basaltic point, known to the *voyageurs* by the name of "Cape Horn."<sup>120</sup> The wind here blew a perfect hurricane, and but for the consummate skill of those who managed our boats, we must have had no little difficulty.

30th.—We were engaged almost the whole of this day in making portages, and I had, in consequence, some opportunity of prosecuting my researches on the land. We have now passed the range of vegetation; there are no trees or even shrubs; nothing but huge, jagged rocks of basalt, and interminable sand heaps. I found here a large and beautiful species of marmot, (the *Arctomys Richardsonii*,) several of which I shot. Encamped in the evening at the village of the Indian chief, *Tilki*. I had often heard of this man, but I now saw him for the first time. His person is rather below the middle size, but his features are good, with a Roman cast, and his eye is deep black, and unusually fine. He appears to be remarkably intelligent, and half a century before the generality of his people in civilization.

July 3d.—This morning we came to the open prairies, covered with wormwood bushes. The appearance, and strong odor of these, forcibly remind me of my journey across the mountains, when we frequently saw no vegetation for weeks, except this dry and barren looking shrub.

The Indians here are numerous, and are now engaged in catching salmon, lamprey eels, &c. They take thousands

---

<sup>120</sup> Cape Horn is a high basaltic cliff towering two thousand five hundred feet above the river bank, not far above Vancouver, in Skamania County, Washington. It was so named because boats were frequently wind-bound in passing this point.—ED.

of the latter, and they are seen hanging in great numbers in their lodges to dry in the smoke. As soon as the Indians see us approach, they leave their wigwams, and run out towards us, [244] frequently wading to their breasts in the water, to get near the boats. Their constant cry is *pi-pi*, *pi-pi*, (tobacco, tobacco,) and they bring a great variety of matters to trade for this desirable article; fish, living birds of various kinds, young wolves, foxes, minks, &c.

On the evening of the 6th, we arrived at Walla-walla or Nez Percés fort, where I was kindly received by Mr. Pambrun, the superintendent.

The next day the brigade left us for the interior, and I shouldered my gun for an excursion through the neighborhood. On the west side of the little Walla-walla river, I saw, during a walk of two miles, at least thirty rattlesnakes, and killed five that would not get out of my way. They all seemed willing to dispute the ground with me, shaking their rattles, coiling and darting at me with great fury. I returned to the fort in the afternoon with twenty-two sharp-tailed grouse, (*Tetrao phasianellus*.) the product of my day's shooting.

25th.—I mounted my horse this morning for a journey to the Blue mountains. I am accompanied by a young half breed named Baptiste Dorion,<sup>121</sup> who acts as guide, groom, interpreter, &c., and I have a pack horse to carry my little *nick-nackeries*. We shaped our course about N. E. over the sandy prairie, and in the evening encamped on the Morro river,<sup>122</sup> having made about thirty miles.

---

<sup>121</sup> This is the son of old Pierre Dorion, who makes such a conspicuous figure in Irving's "Astoria."—TOWNSEND.

*Comment by Ed.* Consult Bradbury's *Travels* in our volume v, p. 38. note 7; also Ross's *Oregon Settlers*, our volume vii, pp. 265-269, wherein the murder of the elder Dorion and the escape of his wife and children are related.

<sup>122</sup> The direction appears to be wrong, as a northeast course would be directly away from the Blue Mountains; moreover it would necessitate crossing Walla

On our way, we met two Walla-walla Indians driving down a large band of horses. They inform us that the Snakes have crossed the mountain to commence their annual thieving of horses, and they are taking them away to have them secure. I shall need to keep a good look out to my own small caravan, or I shall be under the necessity of turning pedestrian.

---

Walla River before reaching Umatilla. It should therefore, obviously, be read "S. E. over the sandy prairie." Morro River must be an upper affluent of Walla Walla (or Umatilla).—ED.

## [245] CHAPTER XV

A village of Kayouse Indians — their occupation — appearance and dresses of the women — family worship — its good effects — Visit to the Blue mountains — Dusky grouse — Return to Walla-walla — Arrival of Mr. McLeod, and the missionaries — Letters from home — Death of Antoine Goddin, the trapper — A renegado white man — Assault by the Walla-walla Indians — Missionary duties — Passage down the Columbia — Rapids — A dog for supper — Prairies on fire — A nocturnal visit — Fishing Indians — Their romantic appearance — Salmon huts — The shoots — Dangerous navigation — Death of Tilki — Seals — Indian stoicism and contempt of pain — Skookoom, the strong chief — his death — Maiming, an evidence of grief — Arrival at Fort Vancouver — A visit to Fort George — Indian cemeteries — Lewis and Clarke's house — A medal — Visit to Chinook — Hospitality of the Indians — Chinamus' house — The idol — Canine inmates.

*July 26th.*— At noon, to-day, we arrived at the Utalla, or Emmitilly river, where we found a large village of Kayouse Indians, engaged in preparing kamas. Large quantities of this root were strewed about on mats and buffalo robes; some in a crude state, and a vast quantity pounded, to be made into cakes for winter store. There are of the Indians, about twelve or fifteen lodges. A very large one, about sixty feet long by fifteen broad, is occupied by the chief, and his immediate family. This man I saw when I arrived at Walla-walla, and I have accepted an invitation to make my home in his lodge while I remain here. The house is really a very comfortable one; the rays of the sun are completely excluded, and the ground is covered with buffalo robes. There are in the chief's lodge about twenty women, all busy as usual; some pounding kamas, others making [246] leathern dresses, moccasins, &c. Several of the younger of these are very good looking,—I might almost say handsome. Their heads are of the natural form,—not flattened and contorted in the horrible manner

of the Chinooks;—their faces are inclining to oval, and their eyes have a peculiarly sleepy and languishing appearance. They seem as if naturally inclined to lasciviousness, but if this feeling exists, it is effectually checked by their self-enacted laws, which are very severe in this respect, and in every instance rigidly enforced. The dresses of the women, (unlike the Chinooks, they all *have* dresses,) are of deer or antelope skin, more or less ornamented with beads and *hyquâs*.<sup>123</sup> It consists of one piece, but the part covering the bust, projects over the lower portion of the garment, and its edges are cut into strings, to which a quantity of blue beads are generally attached.

In the evening all the Indians belonging to the village assembled in our lodge, and, with the chief for minister, performed divine service, or family worship. This, I learn, is their invariable practice twice every twenty-four hours, at sunrise in the morning, and after supper in the evening. When all the people had gathered, our large lodge was filled. On entering, every person squatted on the ground, and the *clerk* (a sort of sub-chief) gave notice that the Deity would now be addressed. Immediately the whole audience rose to their knees, and the chief supplicated for about ten minutes in a very solemn, but low tone of voice, at the conclusion of which an amen was pronounced by the whole company, in a loud, swelling sort of groan. Three hymns were then sung, several of the individuals present leading in rotation, and at the conclusion of each, another amen. The chief then pronounced a short exhortation, occupying about fifteen minutes, which was repeated by the clerk at his elbow in a voice loud enough to be heard by the whole assembly. At the [247] conclusion of this, each person rose, and walked to one of the doors of the lodge, where, making a low inclination of his body, and pro-

<sup>123</sup> A long white shell, of the genus *Dentalium*, found on the coast.—TOWNSEND.

nouncing the words "*tots sekan*," (good night,) to the chief, he departed to his home.

I shall hear this ceremony every night and morning while I remain, and so far from being irksome, it is agreeable to me. It is pleasant to see these poor degraded creatures performing a religious service; for to say nothing of the good influence which it will exert in improving their present condition, it will probably soften and harmonize their feelings, and render them fitter subjects for the properly qualified religious instruction which it is desirable they may some day receive.

The next morning, my friend the chief furnished me with fresh horses, and I and my attendant, with two Indian guides, started for a trip to the mountain. We passed up one of the narrow valleys or gorges which here run at right angles from the alpine land, and as we ascended, the scenery became more and more wild, and the ground rough and difficult of passage, but I had under me one of the finest horses I ever rode; he seemed perfectly acquainted with the country; I had but to give him his head, and not attempt to direct him, and he carried me triumphantly through every difficulty. Immediately as we reached the upper land, and the pine trees, we saw large flocks of the dusky grouse, (*Tetrao obscurus*), a number of which we killed. Other birds were, however, very scarce. I am at least two months too late, and I cannot too much regret the circumstance. Here is a rich field for the ornithologist at the proper season. We returned to our lodge in the evening loaded with grouse, but with very few specimens to increase my collection.

29th.—Early this morning our Indians struck their lodges, and commenced making all their numerous movables into bales for packing on the horses. I admired the facility and despatch with which this was done; the

women alone worked at it, the [248] men lolling around, smoking and talking, and not even once directing their fair partners in their task. The whole camp travelled with me to Walla-walla, where we arrived the next day.

*Sept. 1st.*—Mr. John M'Leod, a chief trader of the Hudson's Bay Company, arrived this morning from the rendezvous, with a small trading party.<sup>124</sup> I had been anxiously expecting this gentleman for several weeks, as I intended to return with him to Vancouver. He is accompanied by several Presbyterian missionaries, the Rev. Mr. Spalding and Doctor Whitman,<sup>125</sup> with their wives,

---

<sup>124</sup> John McLeod had for some years been with the Hudson's Bay Company. He was in charge at Kamloops from 1822 to 1826, and in the latter year built Norway House. In 1832 he founded, in conjunction with Michel La Framboise, Fort Umpqua, the only establishment of the company south of the Columbia. At the time Townsend met him he appears to have headed the Snake country brigade.—ED.

<sup>125</sup> Henry H. Spalding was born in Bath County, New York, in 1803. He studied at Western Reserve, and afterwards at Lane Theological Seminary, which latter school he left to join Dr. Whitman (1836) in a mission to Oregon. Settled at Lapwai, in western Idaho, among the Nez Percés, he maintained the mission at that place until the Whitman massacre in 1847. Narrowly escaping therefrom, he accepted in 1850, at the solicitation of the missionary board, the position of United States Indian agent, and served also as commissioner of schools (1850-55). In 1862 he returned to Lapwai to re-commence mission work, and died among the Nez Percés in 1874.

Dr. Marcus Whitman was born in Rushville, New York, in 1802. Graduating as a physician he was appointed to the Oregon mission in 1834, actually reaching his station in September, 1836, as Townsend narrates—see note 112, p. 335, *ante*. He established his mission at Waiilatpu among the Cayuse, and there labored until 1842, when news from the mission board, advising abandonment of his station, caused his return to the United States. This was the journey regarding which so much controversy has arisen. According to some writers, Whitman's object was to awaken the United States authorities to the necessity of occupying Oregon, and how "Marcus Whitman saved Oregon" to the United States has been much discussed. Recently exceptions have been taken to this view, and eminent historical scholars have minimized Whitman's national services. The first stage of the controversy began about 1883. See Myron Eells, *Marcus Whitman, M. D., Proofs of his work in Saving Oregon to the United States* (Portland, 1883). Later Professor Edward G. Bourne took up the subject and presented a paper at the American Historical Association meeting of 1900 (published in *American Historical Review*, vii, pp. 276-300); this has been expanded into "The Legend of Marcus

and Mr. Gray, teacher.<sup>126</sup> Doctor Whitman presented me with a large packet of letters from my beloved friends at home. I need not speak of the emotions excited by their reception, nor of the trembling anxiety with which I tore open the envelope and devoured the contents. This is the first intelligence which I have received from them since I left the state of Missouri, and was as unexpected as it was delightful.<sup>127</sup>

Mr. M'Leod informed me of the murder of Antoine Goddin, the half-breed trapper, by the Blackfeet Indians, at Fort Hall.—A band of these Indians appeared on the shore of the Portneuf river, opposite the fort, headed by a white man named Bird.—This man requested Goddin, whom he saw on the opposite side of the river, to cross to him with a canoe, as he had beaver which he wished to

---

Whitman" in *Essays in Historical Criticism* (New York, 1901). William I. Marshall of Chicago, discussed Professor Bourne's paper (see *American Historical Association Report* for 1900, i, pp. 219-236) offering additional evidence. Marshall has since published *History vs. the Whitman Saved Oregon Story* (Chicago, 1904). Myron Eells also issued *A Reply to Professor Bourne's "The Whitman Legend"* (Walla Walla, 1902). William A. Mowry essays a defense in *Marcus Whitman and the early days of Oregon* (New York, 1901) which contains a good bibliography. See also additional evidence in articles by William E. Griffis and others, contributed to the *Sunday School Times*, Philadelphia, August 9, November 1, 8, 15, 22, 29, December 3, 1902; January 10, 29, 1903. Whitman returned to his mission, and despite threatening aspects, remained at Waiilatpu until 1847, when suddenly in October the Cayuse arose and massacred most of the members of the mission, including both Dr. Whitman and his wife.—ED.

<sup>126</sup> William H. Gray (born in Utica, New York, in 1810) joined Dr. Whitman as business manager and agent of the expedition. In 1837 he went East for reinforcements, and married Mary Augusta Dix, with whom he returned to Oregon in September, 1838. They labored at Lapwai and Waiilatpu until 1842, when Gray resigned and retired to the Willamette, where he was instrumental in establishing the provisional government. In 1849 Gray went to California during the gold excitement, but returned to Oregon, settling first at Clatsop Plains, and later in Astoria, where he died in 1889. His *History of Oregon* (Portland, San Francisco, and New York, 1870) is a main source for the early decades.—ED.

<sup>127</sup> See reference to this fact and to the meeting with Townsend, in Mrs. Whitman's "Journal," published in *Oregon Pioneer Association Transactions* (1891), pp. 57, 63.—ED.

trade. The poor man accordingly embarked alone, and landing near the Indians, joined the circle which they had made, and *smoked the pipe of peace with them*. While Goddin was smoking in his turn, Bird gave a sign to the Indians, and a volley was fired into his back. While he was yet living, Bird himself tore the scalp from the poor fellow's head, and deliberately cut Captain Wyeth's initials, N. J. W. in large letters upon his forehead. He then hallooed to the fort people, telling them to bury the carcass if they wished, and immediately went off with his party.

[249] This Bird was formerly attached to the Hudson's Bay Company, and was made prisoner by the Blackfeet, in a skirmish several years ago. He has since remained with them, and has become a great chief, and leader of their war parties. He is said to be a man of good education, and to possess the most unbounded influence over the savage people among whom he dwells. He was known to be a personal enemy of Goddin, whom he had sworn to destroy on the first opportunity.

We also hear, that three of Captain Wyeth's men who lately visited us, had been assaulted on their way to Fort Hall, by a band of Walla-walla Indians, who, after beating them severely, took from them all their horses, traps, ammunition, and clothing. They were, however, finally induced to return them each a horse and gun, in order that they might proceed to the interior, to get fresh supplies. This was a matter of policy on the part of the Indians, for if the white men had been compelled to travel on foot, they would have come immediately here to procure fresh horses, &c., and thus exposed the plunderers. Mr. Pambrun is acquainted with the ringleader of this band of marauders, and intends to take the first opportunity of inflicting upon him due punishment, as well as

to compel him to make ample restitution for the stolen property, and broken heads of the unoffending trappers.

I have had this evening, some interesting conversation with our guests, the missionaries. They appear admirably qualified for the arduous duty to which they have devoted themselves, their minds being fully alive to the mortifications and trials incident to a residence among wild Indians; but they do not shrink from the task, believing it to be their religious duty to engage in this work. The ladies have borne the journey astonishingly; they look robust and healthy.<sup>128</sup>

3d.—Mr. M'Leod and myself embarked in a large bateau, with six men, and bidding farewell to Mr. Pambrun and the missionaries, were soon gliding down the river. We ran, to-day, [250] several rapids, and in the evening encamped about fifteen miles below the mouth of the Utalla river.

This running of rapids appears rather a dangerous business to those unaccustomed to it, and it is in reality sufficiently hazardous, except when performed by old and skilful hands. Every thing depends upon the men who manage the bow and stern of the boat. The moment she enters the rapid, the two guides lay aside their oars taking in their stead paddles, such as are used in the management of a canoe. The middle-men ply their oars; the guides brace themselves

---

<sup>128</sup> Mrs. Narcissa Prentice Whitman was a native of Prattsburgh, Steuben County, New York, and married Dr. Whitman just before his journey across the plains (1836). She was of much assistance to him in the mission work, and perished in the massacre of 1847. See her letters and "Journal" in Oregon Pioneer Association *Transactions* (1891). She and Mrs. Spalding were the first white women to cross the plains to Oregon.

Mrs. Spalding (*née* Eliza Hart) was born in Connecticut (1807) and reared in Ontario County, New York. She was less strong than Mrs. Whitman, and her journey at first fatigued her so greatly that it was feared she would not reach its end. Her health improved after passing the mountains, and she was an efficient aid in the mission, learning the Indian languages with great aptitude. After the Whitman massacre she never recovered from the shock, and died in 1851.—ED.

against the gunwale of the boat, placing their paddles edge-wise down her sides, and away she goes over the curling, foaming, and hissing waters, like a race horse.

We passed to-day several large lodges of Indians, from whom we wished to have purchased fish, but they had none, or were not willing to spare any, so that we were compelled to purchase a *dog* for supper. I have said *we*, but I beg leave to correct myself, as I was utterly averse to the proceeding; not, however, from any particular dislike to the quality of the food. (I have eaten it repeatedly, and relished it.) but I am always unwilling, unless when suffering absolute want, to take the life of so noble and faithful an animal. Our hungry oarsmen, however, appeared to have no such scruples. The Indian called his dog, and he came to him, *wagging his tail!* He sold his companion for ten balls and powder! One of our men approached the poor animal with an axe. I turned away my head to avoid the sight, but I heard the dull, *sodden* sound of the blow. The tried friend and faithful companion lay quivering in the agonies of death at its master's feet.

We are enjoying a most magnificent sight at our camp this evening. On the opposite side of the river, the Indians have fired the prairie, and the whole country for miles around is most brilliantly illuminated. Here am I sitting cross-legged on the [251] ground, scribbling by the light of the vast conflagration with as much ease as if I had a ton of oil burning by my side; but my eyes are every moment involuntarily wandering from the paper before me, to contemplate and admire the grandeur of the distant scene. The very heavens themselves appear ignited, and the fragments of ashes and burning grass-blades, ascending and careering about through the glowing firmament, look like brilliant and glorious birds let loose to roam and revel amid this splendid scene. It is past midnight: every one in the camp is asleep, and I am this

moment visited by half a dozen Indian fishermen, who are peering over my shoulders, and soliciting a smoke, so that I shall have to stop, and fill my calamet.

5th.—The Indians are numerous along the river, and all engaged in fishing; as we pass along, we frequently see them posted upon the rocks overhanging the water, surveying the boiling and roaring flood below, for the passing salmon. In most instances, an Indian is seen entirely alone in these situations, often standing for half an hour perfectly still, his eyes rivetted upon the torrent, and his long fish spear poised above his head. The appearance of a solitary and naked savage thus perched like an eagle upon a cliff, is sometimes, — when taken in connexion with the wild and rugged river scenery, — very picturesque. The spear is a pole about twelve feet in length, at the end of which a long wooden fork is made fast, and between the tines is fixed a barbed iron point. They also, in some situations, use a hand scoop-net, and stand upon scaffolds ingeniously constructed over the rapid water. Their winter store of dried fish is stowed away in little huts of mats and branches, closely interlaced, and also in *caches* under ground. It is often amusing to see the hungry ravens tearing and tugging at the strong twigs of the houses, in a vain attempt to reach the savory food within.

In the afternoon, we passed John Day's river,<sup>129</sup> and encamped about sunset at the 'shoots.' Here is a very large village of [252] Indians, (the same that I noticed in my journal, on the passage down.) and we are this evening surrounded by some scores of them.

---

<sup>129</sup> For the pioneer in whose honor this river was named, see Bradbury's *Treatise* in our volume v, p. 181, note 104. The John Day River rises in the Blue Mountains and flows west and northwest, entering the Columbia a few miles above the falls. It is an important stream for central Oregon, forming the boundary, in part, of several counties.— ED.

6th.—We made the portage of the shoots this morning by carrying our boat and baggage across the land, and in half an hour, arrived at one of the upper *dalles*. Here Mr. M'Leod and myself debarked, and the men ran the dall. We walked on ahead to the most dangerous part, and stood upon the rocks about a hundred feet above to observe them. It really seemed exceedingly dangerous to see the boat dashing ahead like lightning through the foaming and roaring waters, sometimes raised high above the enormous swells, and dashed down again as if she were seeking the bottom with her bows, and at others whirled around and nearly sucked under by the whirlpools constantly forming around her. But she stemmed every thing gallantly, under the direction of our experienced guides, and we soon embarked again, and proceeded to the lower *dalles*. Here it is utterly impossible, in the present state of the water, to pass, so that the boat and baggage had to be carried across the whole portage. This occupied the remainder of the day, and we encamped in the evening at a short distance from the lower villages. The Indians told us with sorrowful faces of the recent death of their principal chief, Tilki. Well, thought I, the white man has lost a friend, and long will it be before we see his like again! The poor fellow was unwell when I last saw him, with a complaint of his breast, which I suspected to be pulmonary. I gave him a few simple medicines, and told him I should soon see him again. Well do I remember the look of despondency with which he bade me farewell, and begged me to return soon and give him more medicine. About two weeks since he ruptured a blood vessel, and died in a short time.

We see great numbers of seals as we pass along. Immediately [253] below the Dalles they are particularly abundant, being attracted thither by the vast shoals of salmon which seek the turbulent water of the river. We

occasionally shoot one of them as he raises his dog-like head above the surface, but we make no use of them; they are only valuable for the large quantity of oil which they yield.

We observe on the breasts and bellies of many of the Indians here, a number of large red marks, mostly of an oval form, sometimes twenty or thirty grouped together. These are wounds made by their own hands, to display to their people the unwavering and stoical resolution with which they can endure pain. A large fold of the skin is taken up with the fingers, and sliced off with a knife; the surrounding fibre then retreats, and a large and ghastly looking wound remains. Many that I saw to-day are yet scarcely cicatrized. There is a chief here who obtained the dignity which he now enjoys, solely by his numerous and hardy feats of this kind. He was originally a common man, and possessed but one wife; he has now *six*, and any of the tribe would think themselves honored by his alliance. He is a most gigantic fellow, about six feet four inches in height, and remarkably stout and powerful. The whole front of his person is covered with the red marks of which I have spoken, and he displays with considerable pride the two scars of a bullet, which entered the left breast, and passed out below the shoulder blade. This wound he also made with his own hand, by placing the muzzle of his gun against his breast, and pressing the trigger with his toe; and by this last, and most daring act, he was raised to the chief command of all the Indians on the north side of the river. Now that Tilki is no more, he will probably be chosen chief of all the country from the cascades to Walla-walla. I asked him if he felt no fear of death from the wound in his chest, at the time it was inflicted. He said, no; that his heart was strong, and that a bullet could never kill him. He told me that he was entirely [254] well in a week after this occurrence, but that

for two days he vomited blood constantly. He is named by the Indians "*Skookoom*," (the strong.)

About six weeks after, Mr. M'Leod, who again returned from a visit to Walla-walla, informed me that the strong chief was dead. A bullet, (or rather two of them,) killed him at last, in spite of his supposed invulnerability. He was shot by one of his people in a fit of jealousy. *Skookoom* had assisted Mr. M'Leod with his boats across the portage, and, being a chief, he of course received more for the service than a common man. This wretch, who was but a serf in the tribe, chose to be offended by it, and vented his rage by murdering his superior. He fired a ball from his own gun into his breast, which brought him to the ground, and then despatched him with a second, which he seized from another. So poor *Skookoom* has passed away, and such is the frail tenure upon which an Indian chief holds his authority and his life. The murderer will no doubt soon die by the hand of some friend or relative of the deceased; he in his turn will be killed by another, and as usual, the bloody business will go on indefinitely, and may even tend to produce an open war between the rival parties.

I saw an old man here, apparently eighty years of age, who had given himself three enormous longitudinal gashes in his leg, to evince his grief for the loss of *Tilki*. From the sluggishness of the circulation in the body of the poor old creature, combined with a morbid habit, these wounds show no disposition to heal. I dressed his limb, and gave him a strict charge to have it kept clean, but knowing the universal carelessness of Indians in this respect, I fear my directions will not be attended to, and the consequence will probably be, that the old man will die miserably. I spoke to him of the folly of such inflictions, and took this opportunity of delivering a short lecture upon the same subject to the others assembled in his lodge.

[255] At 11 o'clock next day we arrived at the cascades, where we made the long portage, and at nine in the evening encamped in an ash grove, six miles above *Prairie de Thé*.

On the 8th, reached Vancouver, where we found two vessels which had just arrived from England.

On the 24th, I embarked in a canoe with Indians for Fort George, and arrived in two days. Here I was kindly received by the superintendent, Mr. James Birnie,<sup>130</sup> and promised every assistance in forwarding my views.

30th.—I visited to-day some cemeteries in the neighborhood of the fort, and obtained the skulls of four Indians. Some of the bodies were simply deposited in canoes, raised five or six feet from the ground, either in the forks of trees, or supported on stakes driven into the earth. In these instances it was not difficult to procure the skulls without disarranging the fabric; but more frequently, they were nailed in boxes, or covered by a small canoe, which was turned bottom upwards, and placed in a larger one, and the whole covered by strips of bark, carefully arranged over them. It was then necessary to use the utmost caution in removing the covering, and also to be careful to leave every thing in the same state in which it was found. I thought several times to-day, as I have often done in similar situations before:—Now suppose an Indian were to step in here, and see me groping among the bones of his fathers, and laying unhallowed hands upon the mouldering remains of his people, what should I say?—I know well what the Indian would *do*. He would instantly shoot me, unless I

---

<sup>130</sup> James Birnie was a native of Aberdeen, Scotland. Coming early to America he entered the North West Company's employ and was on the Columbia before 1820, when he was in charge of the post at the Dalles. He was then retained by the Hudson's Bay Company, and given command at Fort George (Astoria) where he remained many years. Later he became a naturalized American, and resided at Cathlamet.—ED.

took the most effectual measures to prevent it; but could I have time allowed me to temporize a little, I could easily disarm his hostility and ensure his silence, by the offer of a shirt or a blanket; but the difficulty in most cases would be, that in a paroxysm of rage he would put a bullet through your head, and then good bye to temporizing. Luckily for my pursuits in this way, there are at present but few Indians here, and I do not therefore incur [256] much risk; were it otherwise, there would be no little danger in these aggressions.

The corpses of the several different tribes which are buried here, are known by the difference in the structure of their canoes; and the *sarcophagi* of the chiefs from those of the common people, by the greater care which has been manifested in the arrangement of the tomb.

*October 14th.*—I walked to-day around the beach to the foot of Young's bay,<sup>131</sup> a distance of about ten miles, to see the remains of the house in which Lewis and Clark's party resided during the winter which they spent here. The logs of which it is composed, are still perfect, but the roof of bark has disappeared, and the whole vicinity is overgrown with thorn and wild currant bushes.<sup>132</sup>

One of Mr. Birnie's children found, a few days since, a large silver medal, which had been brought here by Lewis and Clark, and had probably been presented to some chief, who lost it. On one side was a head, with the name "Th. Jefferson, President of the United States, 1801." On the other, two hands interlocked, surmounted by a pipe

---

<sup>131</sup> For Young's Bay, see Franchère's *Narrative*, our volume vi, p. 259, note 69.—ED.

<sup>132</sup> This is an interesting description of the place, seen thirty years later, where the explorers passed the dismal winter months of 1805-06. For a ground plan of the fort, known as Fort Clatsop, see Thwaites, *Original Journals of the Lewis and Clark Expedition*, iii, pp. 282, 283, 298.—ED.

and tomahawk; and above the words, "Peace and Friendship."<sup>133</sup>

15th.—This afternoon I embarked in a canoe with *Chinamus*, and went with him to his residence at Chinook.<sup>134</sup> The chief welcomed me to his house in a style which would do no discredit to a more civilized person. His two wives were ordered to make a bed for me, which they did by piling up about a dozen of their soft mats, and placing my blankets upon them, and a better bed I should never wish for. I was regaled, before I retired, with sturgeon, salmon, wappatoos, cranberries, and every thing else that the mansion afforded, and was requested to ask for any thing I wanted, and it should be furnished me. Whatever may be said derogatory to these people, I can testify that inhospitality is not among the number of their failings. I never went into the [257] house of an Indian in my life, in any part of the country, without being most cordially received and welcomed.

The chief's house is built in the usual way, of logs and hewn boards, with a roof of cedar bark, and lined inside with mats. The floor is boarded and matted, and there is a depression in the ground about a foot in depth and four feet in width, extending the whole length of the building in the middle, where the fires are made.

In this, as in almost every house, there is a large figure, or idol, rudely carved and painted upon a board, and occupying a conspicuous place. To this figure many of the Indians ascribe supernatural powers. *Chinamus* says that if he is in any kind of danger, and particularly, if he is under the influence of an evil spell, he has only to place himself

<sup>133</sup> A close description of the medals carried by the expedition. See engraving in O. D. Wheeler, *On the Trail of Lewis and Clark* (New York, 1904), ii, pp. 123, 124.—ED.

<sup>134</sup> The site of this Chinook village opposite Astoria, was probably that of the present Fort Columbia, built to protect the entrance to the river.—ED.

against the image, and the difficulty, of whatever kind, vanishes at once. This certainly savors of idolatry, although I believe they never address the uncouth figure as a deity. Like all other Indians, they acknowledge a great and invisible spirit, who governs and controls, and to whom all adoration is due.

Attached to this establishment, are three other houses, similarly constructed, inhabited by about thirty Indians, and at least that number of dogs. These, although very useful animals in their place, are here a great nuisance. They are of no possible service to the Indians, except to eat their provisions, and fill their houses with fleas, and a stranger approaching the lodges, is in constant danger of being throttled by a legion of fierce brutes, who are not half as hospitable as their masters.

I remained here several days, making excursions through the neighborhood, and each time when I returned to the lodge, the dogs growled and darted at me. I had no notion of being bitten, so I gave the Indians warning, that unless the snarling beasts were tied up when I came near, I would shoot every one of them. The threat had the effect desired, and after this, whenever [258] I approached the lodges, there was a universal stir among the people, and the words, "*iskam kahmooks, iskam kahmooks, kalak'alah tie chahko,*" (take up your dogs, take up your dogs, the *bird chief* is coming,) echoed through the little village, and was followed by the yelping and snarling of dozens of wolf-dogs, and "curs of low degree," all of which were gathered in haste to the cover and protection of one of the houses.

## [259] CHAPTER XVI

Northern excursion — Large shoals of salmon — Indian mode of catching them — House near the beach — Flathead children — A storm on the bay — Loss of provision — Pintail ducks — Simple mode of killing salmon — Return to Chinook — Indian garrulity — Return to Fort George — Preparations for a second trip to the Sandwich Islands — Detention within the cape. . . .

*October 17th.*— I left Chinook this morning in a canoe with Chinamus, his two wives, and a slave, to procure shell-fish, which are said to be found in great abundance towards the north. We passed through a number of narrow *slues* which connect the numerous bays in this part of the country, and at noon debarked, left our canoe, took our blankets on our shoulders, and struck through the midst of a deep pine forest. After walking about two miles, we came to another branch, where we found a canoe which had been left there for us yesterday, and embarking in this, we arrived in the evening at an Indian house, near the seaside, where we spent the night.

In our passage through some of the narrow channels today, we saw vast shoals of salmon, which were leaping and curvetting [260] about in every direction, and not unfrequently dashing their noses against our canoe, in their headlong course. We met here a number of Indians engaged in fishing. Their mode of taking the salmon is a very simple one. The whole of the tackle consists of a pole about twelve feet long, with a large iron hook attached to the end. This machine they keep constantly trailing in the water, and when the fish approaches the surface, by a quick and dexterous jerk, they fasten the iron into his side, and shake him off into the canoe. They say they take so many fish that it is necessary for them to land about three times a day to deposit them.

The house in which we sleep to-night is not near so comfortable as the one we have left. It stinks intolerably of salmon, which are hanging by scores to the roof, to dry in the smoke, and our bed being on the dead level, we shall probably suffer somewhat from fleas, not to mention another unmentionable insect which is apt to inhabit these dormitories in considerable profusion. There are here several young children; beautiful, flat-headed, broad-faced, little individuals. One of the little dears has taken something of a fancy to me, and is now hanging over me, and staring at my book with its great goggle eyes. It is somewhat strange, perhaps, but I have become so accustomed to this universal deformity, that I now scarcely notice it. I have often been evilly disposed enough to wish, that if in the course of events one of these little beings should die, I could get possession of it. I should like to plump the small carcass into a keg of spirits, and send it home for the observation of the curious.

18th.—Last night the wind rose to a gale, and this morning it is blowing most furiously, making the usually calm water of these bays so turbulent as to be dangerous for our light craft. Notwithstanding this disadvantage, the Indians were in favor of starting for the sea, which we accordingly did at an early hour. Soon after we left, in crossing one of the bays, about three-quarters [261] of a mile in width, the water suddenly became so agitated as at first nearly to upset our canoe. A perfect hurricane was blowing right ahead, cold as ice, and the water was dashing over us, and into our little bark, in a manner to frighten even the experienced chief who was acting as helmsman. In a few minutes we were sitting nearly up to our waistbands in water, although one of the women and myself were constantly bailing it out, employing for the purpose the only two hats belonging to the party, my own and that of the chief. We arrived at the shore at length in safety, although there was scarcely a dry thread on

us, and built a tremendous fire with the drift-wood which we found on the beach. We then dried our clothes and blankets as well as we could, cooked some ducks that we killed yesterday, and made a hearty breakfast. My stock of bread, sugar, and tea, is completely spoiled by the salt water, so that until I return to Fort George, I must live simply; but I think this no hardship: what has been done once can be done again.

In the afternoon the women collected for me a considerable number of shells, several species of *Cardium*, *Citherea*, *Ostrea*, &c., all edible, and the last very good, though small.

The common pintail duck, (*Anas acuta*), is found here in vast flocks. The chief and myself killed *twenty-six* to-day, by a simultaneous discharge of our guns. They are exceedingly fat and most excellent eating; indeed all the game of this lower country is far superior to that found in the neighborhood of Vancouver. The ducks feed upon a small submerged vegetable which grows in great abundance upon the reedy islands in this vicinity.

The next day we embarked early, to return to Chinook. The wind was still blowing a gale, but by running along close to the shore of the stormy bay, we were enabled, by adding greatly to our distance, to escape the difficulties against which we contended [262] yesterday, and regained the slues with tolerably dry garments.

At about 10 o'clock, we arrived at the portage, and struck into the wood, shouldering our baggage as before. We soon came to a beautiful little stream of fresh water, where we halted, and prepared our breakfast. In this stream, (not exceeding nine feet at the widest part,) I was surprised to observe a great number of large salmon. Beautiful fellows, of from fifteen to twenty-five pounds weight, darting and playing about in the crystal water, and often exposing three-fourths of their bodies in making their way through

the shallows. I had before no idea that these noble fish were ever found in such insignificant streams, but the Indians say that they always come into the rivulets at this season, and return to the sea on the approach of winter. Our slave killed seven of these beautiful fish, while we made our hasty breakfast, his only weapon being a light cedar paddle.

We reached Chinook in the evening, and as we sat around the fires in the lodge, I was amused by the vivid description given to the attentive inhabitants by Chinamus and his wives, of the perils of our passage across the stormy bay. They all spoke at once, and described most minutely every circumstance that occurred, the auditors continually evincing their attention to the relation by a pithy and sympathizing *hugh*. They often appealed to me for the truth of what they were saying, and, as in duty bound, I gave an assenting nod, although at times I fancied they were yielding to a propensity, not uncommon among those of Christian lands, and which is known by the phrase, "drawing a long bow."

21st.—The wind yesterday was so high, that I did not consider it safe to attempt the passage to Fort George. This morning it was more calm, and we put off in a large canoe at sunrise. When we had reached the middle of Young's bay, the wind again rose, and the water was dashing over us in fine style, so that we [263] were compelled to make for the shore and wait until it subsided. We lay by about an hour, when, the water becoming more smooth, we again got under way, and arrived at Fort George about noon.

On the 5th of November, I returned to Vancouver, and immediately commenced packing my baggage, collection, &c., for a passage to the Sandwich Islands, in the barque Columbia, which is now preparing to sail for England. This is a fine vessel, of three hundred tons, commanded by Captain Royal; we shall have eight passengers in the cabin; Captain

Darby, formerly of this vessel, R. Cowie, chief trader, and others.

On the 21st, we dropped down the river, and in two days anchored off the cape. We have but little prospect of being able to cross the bar; the sea breaks over the channel with a roar like thunder, and the surf dashes and frets against the rocky cape and drives its foam far up into the bay.

I long to see blue water again. I am fond of the sea; it suits both my disposition and constitution; and then the reflection, that now every foot I advance will carry me nearer to my beloved home, is in itself a most powerful inducement to urge me on. But much as I desire again to see home, much as I long to embrace those to whom I am attached by the strongest ties, I have nevertheless felt something very like regret at leaving Vancouver and its kind and agreeable residents. I took leave of Doctor McLoughlin with feelings akin to those with which I should bid adieu to an affectionate parent; and to his fervent, "God bless you, sir, and may you have a happy meeting with your friends," I could only reply by a look of the sincerest gratitude. Words are inadequate to express my deep sense of the obligations which I feel under to this truly generous and excellent man, and I fear I can only repay them by the sincerity with which I shall always cherish the recollection of his kindness, and the ardent prayers I shall breathe for his prosperity and happiness.

[264] 30th.—At daylight this morning, the wind being fair, and the bar more smooth, we weighed anchor and stood out. At about 9 o'clock we crossed the bar, and in a few minutes were hurrying along on the open sea before a six-knot breeze. We are now out, and so good bye to Cape Disappointment and the Columbia, and now for *home*, dear home again!

# PERSONAL NARRATIVE

OF

## *Travels in Virginia, Maryland, Pennsylvania, Ohio, Indiana, Kentucky; and of a Residence in the Illinois Territory: 1817-1818*

BY

ELIAS PYM FORDHAM

With facsimiles of the author's sketches and plans

Edited with Notes, Introduction, Index, etc., by

FREDERIC AUSTIN OGG, A. M.

*Author of "The Opening of the Mississippi"*

---

**AN UNPUBLISHED MS.**

This hitherto unpublished MS., which is a real literary and historical find, was written in 1817-18 by a young Englishman of excellent education who assisted Morris Birkbeck in establishing his Illinois settlement. The author writes anonymously, but by a careful study of various allusions in the *Narrative* and from information furnished by the family in possession of the MS., has been identified as Elias Pym Fordham. Landing at Baltimore, he reached the West by way of Philadelphia, Pittsburg, and the Ohio River to Cincinnati, describing the people and the country as he went along.

**THE MIDDLE WEST IN 1817**

Fordham was an especially well-qualified observer of the Middle West because of the numerous journeys he undertook, on land-hunting trips for new emigrants, in the service of Mr. Birkbeck. These journeys led him into Indiana, Ohio, and Kentucky;

## FORDHAM'S PERSONAL NARRATIVE

---

and he never omits the opportunity to make frank and pointed comment on society, manners, and morals, as well as careful observations of the face of the country and of industrial conditions. The style is quite unaffected and has much natural charm and sprightliness; and the fact that he wrote anonymously made him much more free in his comments on contemporary society than would otherwise have been possible.

### LOCAL AND PIONEER HISTORY

These journeys also gave him unexampled opportunities for contact with the pioneers of the Middle West, and his journal is consequently rich in *personalia* of early settlers, remarks on contemporary history and politics, state of trade, agriculture, prices, and information on local history not obtainable elsewhere. He also visited the larger cities and gives very interesting accounts of Pittsburg and Cincinnati, accompanied by original sketches and plans. In Kentucky he had the opportunity to study slavery; and although at first prejudiced against this institution he finally reached the conclusion that the slave states offered better chances of successful settlement than the free states.

### VALUE FOR READERS AND STUDENTS

The publication of Fordham's *Narrative* with introduction, extensive annotations, and index by Professor Frederic A. Ogg, one of the best authorities on the history of the Mississippi Valley, will make accessible to historical students much new and important material, besides giving the general reader a book of vital and absorbing interest.

**T**HIS exceedingly rare work was issued in London, in 1770, and has been so much in demand by historical students and collectors of Americana that even imperfect copies of the original are now almost impossible to obtain at any price. Our text is from a perfect copy of the original with all the folding maps and plans carefully reproduced.

\*Only two copies have been offered for sale during the past five years; one copy sold at \$95.00, and the other is now offered by a reliable firm of booksellers at \$105.00.

# PITTMAN'S MISSISSIPPI SETTLEMENTS

---

---

Pittman's *Mississippi Settlements* contains much valuable original material for the study of the French and Spanish Settlements of old Louisiana, West Florida, and the Illinois country. The author, Captain Philip Pittman, was a British military engineer, and gives an accurate general view of the Mississippi Settlements just after the English came into possession of the eastern half of the valley by the Peace of 1763. His account, written from personal observation, is rich in allusions to the political, social, and military readjustments resulting from this change of possession. "A comprehensive account of the Illinois country and its inhabitants, with sketches in detail of the several French posts and villages situated therein, as personally viewed by him in 1766-67. . . . It contains, in a compact form, much useful and reliable information (nowhere else to be found) concerning the Mississippi Valley and its people at that transition period." — WALLACE: *Illinois and Louisiana under French Rule*.

*The earliest English account* Dr. William F. Poole in Winsor's *Narrative and Critical History of America* says: "It is the earliest English account of those settlements, and, as an authority in early western history, is of the highest importance. He [Pittman] was a military engineer, and for five years was employed in surveying the Mississippi River and exploring the western country. The excellent plans which accompany the work, artistically engraved on copper, add greatly to its value."

An introduction, notes, and index have been supplied by Professor Frank Heywood Hodder, who has made a special study of American historical geography. The value of the reprint is thus enhanced by annotation embodying the results of the latest researches in this field of American history.

---

The edition is limited to 500 copies, each numbered. It is handsomely printed in large Caslon type on Dickinson's deckle-edged paper. With folding maps and plans. Large 8vo, cloth, uncut, gilt top. Price \$3.00 net.

PUBLISHERS CLEVELAND, OHIO

# AUDUBON'S WESTERN JOURNAL: 1849-1850

---

Being the MS. record of a trip from New York to  
Texas, and an overland journey through Mexico  
and Arizona to the gold-fields of California

By

*JOHN W. AUDUBON*

---

With biographical memoir by his daughter  
MARIA R. AUDUBON

*Edited by*

FRANK HEYWOOD HODDER

Professor of American History, University of Kansas

*With folded map, portrait, and original drawings*

---

JOHN W. AUDUBON, son of the famous ornithologist, was a member of Colonel Webb's California Expedition which started from New York City for the gold-fields in February, 1849. The Journal consists of careful notes which Audubon made en route. It was written with a view to publication, accompanied by a series of sketches made at intervals during the journey; but owing to Audubon's pre-occupation with other affairs, the plan of publication was never realized.

The Journal is, therefore, here published for the first time, and is illustrated by the author's original sketches, carefully reproduced. It gives a vivid first-hand picture of the difficulties of an overland journey to California, and of the excitements, dangers, and privations of life in the

## AUDUBON'S WESTERN JOURNAL

---

gold-fields. An additional interest attaches to this account from the fact that Colonel Webb deserted his party, which consisted of nearly a hundred men, when the expedition reached Roma, and the command then by unanimous choice of the party devolved upon Audubon. This situation, as modestly related by the author, displays his sympathetic nature, as well as his keenness and ability as a leader.

Besides being a fascinating story of adventure, the Journal throws much light on the interesting years immediately following the discovery of gold in California. John W. Audubon was (with his brother Victor G. Audubon) the assistant of his father, and executed much of the artistic work on the famous "Quadrupeds of North America." His pictures of the spreading of the gold craze in the East, the journey through Mexico, and the social conditions after reaching California, show him to be a keen and faithful observer.

The Editor, Professor F. H. Hodder, of the University of Kansas, has supplied complete annotation explaining matters of topography, natural science, and historical and personal allusions. Professor Hodder in his editorial work has drawn liberally upon his special knowledge of the history and geography of the West and Southwest. A biographical memoir has been written by Miss Maria R. Audubon. Being the daughter of the author, she has availed herself of a large amount of auxiliary material not accessible to any other biographer.

*PUBLISHERS* CLEVELAND, OHIO

*The First Circumnavigation of the Globe*

# MAGELLAN'S VOYAGE AROUND THE WORLD

BY ANTONIO PIGAFETTA

The original and complete text of the oldest and best MS. (the Ambrosian MS. of Milan, of the early XVI century). The Italian text with page-for-page English translation. Translated, edited, and annotated by James A. Robertson, of the editorial staff of "The Jesuit Relations and Allied Documents" and co-editor of "The Philippine Islands: 1493-1898." *With numerous maps, plates, and facsimiles.*

---

"By far the best and fullest account of the expedition." — *Guillemard.*

---

IGAFETTA'S ACCOUNT, the fullest and best authority for the famous Voyage of Magellan, is here completely presented in English for the first time. Pigafetta was an Italian of noble family, interested in navigation and fond of travel. Happening to be in Spain when Magellan was about to sail, he secured permission to accompany the expedition. Pigafetta kept a detailed account of the incidents of the voyage and faithfully recorded his observations on the geography, climate, and resources of the numerous strange countries visited or described to him. Of especial value are his remarks on the customs, physical character, and languages of the various peoples of South America, and the Ladrones, Philippines and other Asiatic Islands. Pigafetta's Account, notwithstanding its great im-

portance to students, has never been adequately published. Stanley, in his translation for the Hakluyt Society, omits many passages relating to the manners and customs of native peoples, mis-translates other passages; and furthermore does not translate from the original Italian, but in part from a defective French MS. of later date, and in part from Amoretti's garbled printed edition of the Ambrosian MS.

The MS. which we use is the oldest in existence and is conserved in the Biblioteca Ambrosiana at Milan. This MS. was purported to have been published in 1800 by Amoretti, but his publication was what the Italians call a *refacimento*, in which the order is entirely changed at times to say nothing of the meaning. To insure a correct version of the text, the editor, Mr. Robertson, visited Milan and undertook the transcription personally.

The numerous charts of the original are carefully reproduced, together with a rare early map, showing Magellan's discoveries in the Far East. To preserve the archaic forms and peculiar letters of the old Italian, type has been specially designed and cut for many peculiar characters. The editing and annotation are elaborate and exhaustive; an Index and a complete Bibliography are added, making this the

# The Historic Highways of America

by ARCHER BUTLER HULBERT

A series of monographs on the History of America as portrayed in the evolution of its highways of War, Commerce, and Social Expansion.

Comprising the following volumes :

- I—Paths of the Mound-Building Indians and Great Game Animals.
- II—Indian Thoroughfares.
- III—Washington's Road: The First Chapter of the Old French War.
- IV—Braddock's Road.
- V—The Old Glade (Forbes's) Road.
- VI—Boone's Wilderness Road.
- VII—Portage Paths: The Keys of the Continent.
- VIII—Military Roads of the Mississippi Basin.
- IX—Waterways of Westward Expansion.
- X—The Cumberland Road.
- XI, XII—Pioneer Roads of America, two volumes.
- XIII, XIV—The Great American Canals, two volumes.
- XV—The Future of Road-Making in America.
- XVI—Index.

Sixteen volumes, crown 8vo, cloth, uncut, gilt tops. A LIMITED EDITION only printed direct from type, and the type distributed. Each volume handsomely printed in large type on Dickinson's hand-made paper, and illustrated with maps, plates, and facsimiles.

Published a volume each two months, beginning September, 1902.

PRICE, volumes 1 and 2, \$2.00 net each; volumes 3 to 16, \$2.50 net each.

FIFTY SETS PRINTED ON LARGE PAPER, each numbered and *signed by the author*. Bound in cloth, with paper label, uncut, gilt tops. Price, \$5.00 net per volume.

---

"The fruit not only of the study of original historical sources in documents found here and in England, but of patient and enthusiastic topographical studies, in the course of which every foot of these old historic highways has been traced and traversed."—*The Living Age*.

"The volumes already issued show Mr. Hulbert to be an earnest and enthusiastic student, and a reliable guide."—*Out West*.

"A look through these volumes shows most conclusively that a new source of history is being developed—a source which deals with the operation of the most effective causes influencing human affairs."—*Iowa Journal of History and Politics*.

"The successive volumes in the series may certainly be awaited with great interest, for they promise to deal with the most romantic phases of the awakening of America at the dawn of occidental civilization."—*Boston Transcript*.

"The publishers have done their part toward putting forth with proper dignity this important work. It is issued on handsome paper and is illustrated with many maps, diagrams, and old prints."—*Chicago Evening Post*.
